Ibm db2 sql codes pdf

SQL return codes are used on a daily basis to diagnose programming failures caused by SQL calls by DB2 computer programs. An important feature of DB2 programs is processing the error. The error diagnosis that contains the SQL return code is held in the SQLCODE field within the SLCA DB2 block. SQLCODE is no longer part of the SQL facility. SQL Standard replaced SQLCODE by a more detailed SQLSTATE. SQLCA SQL Communications Zone Structure (SQLCA) is used within the DB2 program to return feedback to the application program. SQLCODE The SQLCODE field contains the SQL return code. The code can be zero (0), negative, or positive: 0 means that the execution succeeded. Negative values indicate a failed execution with an error. An example is -911, which means that a timeout occurred when you return to the state that you are returning. A positive value means successful execution with a warning. An example is +100, which means no matching rows were found or the cursor reached the end of the table. Here is a more comprehensive list of SQLCODEs for DB2. Note that this list is not exhaustive. Also note that some SQLCODEs may occur only in specific DB2 products; For example, only in DB2 z/OS, only in DB2 LUW, or only in DB2 iSeries (AS400). Zero (succeeded) 0 successful negative values (errors) -007 The specified 'character' is not a valid character in SQL statements. -010 The string constant beginning with the string did not end correctly. - Section 029 of the section in action is required. -060 Invalid Type Specification : Specification -084 SQL statement is not acceptable. -101 The statement is too long or too complex. - String constant 102 is too long. - String constant 103 is too long. Maximum is 128 characters. -104 Invalid icon encountered in SQL statement. - String constant 105 is too long. -117 The number of values in INSERT does not match the number of columns. -122 Column or expression in the picklist is invalid -156 Invalid syntax next to keyword. -180 data not good on date/time/time. -181 data not good on date/time/time. -188 The host variable in the outline statement descriptor is not a valid string representation of a name. -199 Invalid use of the specified keyword. -203 A reference to the -name-command is an ambiguous -204 object that is not defined as DB2. - Column name 205 is not in the table. -206 Column does not exist in any SELECT table. - 207 Invalid column name. -208 The ORDER BY statement is invalid because a column name is not part of the results table -209 Ambiguous column name -216 not the same number of expressions on both sides of the comparison in SELECT. -FETCH 224 cannot make an insensitive marker sensitive. -229 The zone specified in the SET LOCALE declaration could not be found. -257 Implicit conversion in data types is not allowed. -289 DB2 is running low in table space -302 The value of an input variable or position number parameter number is invalid or too large The target column or target value -303 cannot assign a value to the variable number position number of an output host because the data types do not resemble the -305 Null indicator needed. -Varchar 311, enter or update. -LEN field with correct data length not defined. -313 The number of specified host variables does not equal multiple parameter markers. -401 operation operator data types do not match. -404 The specified Sql statement contains a string that is too long. -407 An update, insert, or definition value is NULL, but the object column column name cannot contain NULL values -408 A value does not match the data type of its allocation target. The destination name is <name> (***OBS: Para alguns casos o CAST resolve) -414 Overflow occurred during numeric data type conversion. -414 As predicate is not valid because the first operand is not a string. -The corresponding 415 columns, number of columns, of the operends of a set operator do not match. -418 The use of a parameter marker is invalid. -420 The value of string argument was inadmissible to function 'function name' -433 Data too large -438 Application raised error with diagnostic text: Text -440 Routine &1 B&2 was not found with specified parameters. No function or procedure was found with the specified name and corresponding tigoments. [1] -482 The procedure was not returned from sites. -Marker 501 does not open in FETCH. -502 Opening marker already open. Update column 503 must be specified. The marker name hasn't been announced. -510 The table defined by the cursor of the update or delete statement cannot be changed. -530 Referential integrity that prevents referential integrity from adding/updating -532 (DELETE Restrict Rule) that prevents DELETE. -536 referential integrity (DELETE Restrict) rule that prevents DELETE. -545 Check a constraint that prevents INSERT/UPDATE. - 551 certificate failure. -554 Authorization ID or role cannot grant permission to itself. - 601 You have attempted to create an object that already exists -602 too many columns specified in the create index. Unique index -603 cannot be created because the table contains rows that are duplicates relative to the values of the identified columns and periods -604 Data type definition specifies length, invalid precision, Or scaling attribute -607 Action or action option is not set for this object -610 Warning: Create/modify object Placed object on hold -611 Only lockmax 0 can be specified when the lock size of the table space is table space or table -612 ID is a duplicate name -613 Primary key or hash key or unique constraint too long or has too many columns and periods -614</name The index cannot be created or changed, or the column length cannot be changed because the sum of the internal lengths of the columns for the index is greater than the allowed amount-615 Operation type not allowed on package used -616 obj-type1 obj-name1 cannot be canceled because it is referenced by obj-type2 obj-name2 -617 Index type 1 is not valid for table action -618 is not allowed in the operation system database -619 is not allowed because the database is not stopped -620 keyword in the stmt statement is not allowed for space of type space in the database type -621 dbid duplicate detected and previously assigned database name -622 for mixed data is invalid because the data installation option Mixed is not cluster -623 is not valid for table name -624 Table already has primary key or unique constraint with specified columns and periods -625 Table name does not index to enforce the uniqueness of primary key or unique -625 Warning: Table definition changed To -626 incompation the change statement cannot be executed because the page detachation does not stop -627 The change statement is invalid because the table space or index has user-managed data sets -628 statements are mutually exclusive -629 set null Cannot specify because foreign key name cannot contain Null values -630 Error: The where not null-specific struct is invalid for indexes of type 1 -631 Foreign key name too long or there are too many columns -632 the table does not have Option to set as table name dependent due to DELETE rule restrictions -633 Delete rule must be DELETE-rule -634 DELETE rule cannot be rated -635 DELETE rules cannot be modified or cannot set null ranges -636 specified for partial array Partition is invalid -637 keyword duplicate name or cannot create statement -638 table name because column definition is missing -639 Nullable column of foreign key with null definition DELETE rule cannot be to column of index key divided into Partitions -640 locksize row cannot be specified because a table in this table space has a type 1 index -642 too many columns in unique constraints -643 Check constraint or the value of an expression for an index column exceeds the maximum length key expression Allowed -644 Invalid value specified for keyword or legal key-or sentence statement in stmt-645 type of statement -645 when NOT NULL is ignored because the index key cannot contain Null values -646 name Table-name table name-space in the specified table because it can already contain Null values -646 Table name in table contains table -647 bufferpool bp-name for implicit or explicit table space or index area name not started -650 Change statement cannot be executed , copyright code reason 2014 TheAmericanProgrammer.com copy is not allowed -651 table description exceeds the maximum object descriptor size. -652 Violation of installation defined editing or validating proc-name procedure table -653 table name in table partitioned tspace-name is not available because Index connected to partitions not created -655 Created group create or modify the setGroup is invalid because the storage group will have both specific volume IDs and non-specific -658 object type cannot be canceled by using the -660 index no index name Can be created or modified on tspace name Partitioned table space because key limits are not specified -661 object-type object object name-cannot be created on tspace name Partitioned table space because some partition specifications is not equal to the number of partitions from space Table 662 Cannot create an index that is partitioned on table space, or the index of table space cannot be controled. Space name in table, reason code -663 The number of key limit values is zero, or greater than the number of columns in the index name key -664 The internal length of the limit key fields for the partitioned index exceeds the length imposed by index manager -665 The partition statement of a change statement is omitted or an invalid object cannot be executed -666 stmt-verb Because the function is in progress -667 Clustering index for partitioned table space cannot be explicitly decreased -668 The column cannot be added to the table because the table has an editing procedure Defined with sensitivity to row attribute -669 the object cannot explicitly. Reason-code -670 The record length of the table exceeds the page size limit -671 The buffer buffer attribute of the table space cannot be changed as specified because it will change the page size of the area of the table -672 Drop Action is not allowed in table table_name -676 The physical properties of the index do not match with respect to the specified declaration. The statement failed. Reason-code reason -677 Enough virtual storage for the fixed Store Extension -678 specified for the index limit key must match the data type of the data type of column name -679 The corresponding column name object name cannot be created because a pending hair on the object -680 too many columns specified for table, view, or table function -681 column-name violation of the field procedure is set to Installation. rt: return code, rs: reason code, msg: message token -682 procedure-name could not load -683 specification for column, A separate type, function, or data item contains incompatible statements -684 The start string length of a fixed list is too long -685 Invalid field type, column column name column -686 defined with field procedure cannot compare with another column with different field procedure -687 Field types unparalleled -688 Incorrect data returned from field procedure Column name , msgno -689 Too many columns defined for a dependent table -690 Statement is rejected by data definition control support. No -692 The unique index name required for the ddl registration table table name does not exist -693 The Column name in the column in the ddl registration table name is not set correctly -694 The schema declaration cannot be executed because a pending wash in the ddl-name registration table -694 The ddl clause cannot be executed because a pending drop in the ddl -695 seclabel registration table has an invalid value specified for table name security label column -696 The trigger name definition includes invalid use of adapter name or pass table name. Reason code =Reason code -697 Old or new adapter names are not allowed in a trigger defined with for each statement. old_table or new_table are not allowed in a trigger with the previous sentence. -747 The table is not available. -803 Duplicate key when adding or updating. -804 Error in input parameters for SQL statement. -805 DBRM or package not found in the program. -811 More than one row retrieved in SELECT INTO. -818 Program and Software: Time Mismatch- -Resource disabled 904. Someone else is locking up your data. - Dead end or timeout 911. Return to spoon mode finished. - Dead end or timeout 913. There's no going back to the way you're going back. - A 922 permit is required. -924 Internal DB2 connection error. -927 The language interface has been called but no contact has been made. Cannot allocate 955 sort memory to process the sentence. -964 Transaction log space is depleted or a temporary increase in the number of active transactions. -998 An error occurred during a transaction or heoristic processing.   -7008 The specified object is not valid for the requested operation. -10330 Permission denied to modify database. Contact your system administrator. -30090 Remote operation is not valid for application execution environment. [1] Positive values (warnings) +98 Dynamic SQL statement ends with semicolon +100 row not found or end of cursor. +222 is attempting to fetch a line within the DELETE declaration. +223 attempts to bring a line within the UPDATE statement. +231 FETCH after before or after but not in a valid line. +304 Cannot assign a value with a data type (data type 1) to a host variable because the value is not in range of the host variable in a location (location number) with data type (data type 2) +354 Fetch declaration of a row set returned one or more rows of data. However, one or more more warning conditions have also been encountered. Use the Get Diagnostics statement for more information about the conditions encountered by +562 The system ignored a grant because the grant already has the grant privilege. +802 Null indicator set to -2 as.
