## Penn state graduation summer 2020

Alot Education &gt; Schools &amp; Programs Getting students to complete high school is not an easy feat, especially nowadays. It requires a lot of work from everyone to parents to students to elected officials. Some countries are doing a great job of putting a lot of money and effort into their education programs. Other? Well, not so much. It's not like they're not trying - they just don't try hard enough. We decided to do some digging and figure out which condition is the best of the best (and worst of the worst). We were surprised at worst (if you can call it), but we were particularly shocked by the best! If getting kids to walk around the stage and take that piece of paper is the goal, some should definitely train a little better. Statistics taken from the 2018 Common Data Core by the National Data Center and the education department of each state. We know that the District of Columbia is not technically a state, but we had to raise their high school graduation rate. According to the National Data Center's Joint Data Core, D.C. has a completion rate of 68.5%. That's 20% less than the national average. That's a pretty shocking number, especially for the place of the Capital of the United States. You could say it's because there are not many schools in the county. However, if you include private and public schools, there are quite a few options. Fun fact: Al Gore calls the District of Columbia home! (Image via Pinterest) When it comes to continental states, the state with the lowest graduation rate is New Mexico. This is certainly not great considering that the United States has about an 88% high graduation rate (aka a number that is not too hard to achieve). While we'd like to say it's getting better, New Mexico's statistics seem turbulent. Over the past few years, the state has managed to increase graduation rates from 2010-2011, when it was just 63%. However, the trend appears to be inconsistent. The rate is reflected from 63% to 73.9% - the latter is the most up-to-date graduation statistics. Maybe they finally broke a bad streak and see the pattern up. Fun fact: Neil Patrick Harris is from New Mexico! (Image via Pinterest) Alaska has several problems, but one of their biggest is their high graduation rate. The latest statistics show that 78.5% of pupils who enter secondary school actually leave school. Well, we have to say that the state is getting better. In the 2010-2011 school year, only 68% of students graduated from Alaska high school. Now that number has improved by 10%. It's getting better every year, so everything they do works. Fun fact: Sarah Palin is from Alaska! (Image via Pinterest) Arizona's stats are not great and they can definitely improve. About students who enter high school is about 10% below the national average. Like many bottom-listers, Arizona has difficulty keep children in class. In the school year 2010-2011, the statistics were very similar – 78% of students completed their studies. Unfortunately, this figure fell until 2016, when it rebounded to 80%. What is going on? They were on the path up, and now they're falling again! Fun fact: Emma Stone is from Arizona! (Image via Pinterest) Oregon is supposed to be super smart, right? This is something that's tense. It turns out they don't have great statistics. Currently, the high school graduation rate is 78.8%, but it could be worse. Previous years were much worse. For three years in a row (from 2010 to 2013), the state could not even break 70%. It was only recently that the state changed something that encouraged children to stay in school. I have to say that the jump of 10% is pretty good, though. Fun fact: You Murrell called Oregon home! (Image via Pinterest) Believe it or not, Michigan has remained fairly stable over the years. The lowest was 74% between 2010 and 2011, but that was some time ago. By 2015, the high school graduation rate had reached 80%, and has been hanging on to it since. Data from the Michigan Department of Education shows that graduation rates have improved significantly since 2019. They exchange a rate of 81.41%. It can't be much longer that they're in the bottom 10! Fun fact: Believe it or not, Eminem is from Michigan! (Image via Pinterest) Idaho is really weird. The National Center for Education Statistics did not have data for Idaho until the 2013-2014 school year. There are only two other states that have had this phenomenon (Oklahoma and Kentucky). We had to do some digging, and we found an Idaho State Department of Education memo stating that Idaho's high school graduation rate is on the rise (supposedly). In 2018, 80.7% of students graduated from high school. A year earlier it was 79.97%, compared with 79.66% a year earlier. Well, they're technically right. Graduation rates are getting better, even if it's only 0.01%. At least 2018 is higher. Fun fact: Aaron Paul is from Idaho! (Image via Pinterest) For some reason, Colorado is another one we expected to be better. Not that 80.8% is awful (at least they're not as low as D.C.), but they have some pretty great schools. If you look at the Statistics of the Colorado Department of Education, it looks a bit better, although most children need more than four years to go through high school. The state lists the six-year completion rate for the 2017 class at 85.7%; we say again: six years. It's closer to the national average, but six years is a lot. In 2019, the four-year graduation rate is significantly higher than the previous year at 81.1%. Fun fact: Amy Adams is from Colorado! via Pinterest) South Carolina has some work to do, but in fact we are impressed. In 2011, the graduation rate was 74% – not even close to the national average at the time. In 2018, they knocked it out by up to 81%. Well done, South Carolina! Fun fact: Andie MacDowell is from South Carolina! Now for bad news. In the year of completion of 2016, the figure was 83%. It certainly can be a fluke, so we won't judge. The number of people who have fallen in the last two years may increase again. (Image via Pinterest) Louisiana is another state that has drastically improved its education system. In the 2018 graduation year, they managed to get 81.4% of their students to complete their studies. Yes, this is lower than the national average, but let's look at previous years. Don't throw numbers at you, but in 2011 it was 71%. 2012 72%. 2013 74%. 2014 75%. 2015 78%, and 2016 79%. Do you see a trend? Do! From year to year, the state is getting better, so soon they will not be on the list at all. Fun fact: Harry Connick Jr. called home in Louisiana! (Image via Pinterest) First, we went to congratulate Georgia for being able to pull off an 81.6% graduation rate. It's lower than 88% (which is the national average), but we're looking at previous years, and wow! In the 2010-2011 school year, their graduation rate was a shockingly low 67%. It's so horrible that it was literally the worst completion rate of the year (excluding D.C.). Thanks to hard work and determination, they managed to get their rates up to 81.6%. Good numbers are still going on, as the Georgia Department of Education reported that the rate is 82% in 2019. That's the highest level! Fun fact: Jeff Foxworthy is from Georgia! (Image via Pinterest) Missouri is strange. Their graduation rate is currently 89.2%, which is certainly above the national average. In fact, Missouri consistently ranks above the national average by at least a few points per year. However, something lurks underneath. Missouri shouldn't be patting on its back yet. NPR stated that the state does not require students to take Algebra II to complete their studies. Moreover, there is no diploma of study and career. We can't help but wonder what statistics would have been if they hadn't taken Algebra II. Fun fact: Brad Pitt is from Missouri! (Image via Pinterest) Arkansas has done a pretty good job of staying above the curve when it comes to the high graduation rates they are interested in. Since 2010, they have been above the national rate and this trend is not going anywhere. The state places great emphasis on school. Over the past four years, Arkansas has been bouncing between 89% and 87%, with this year being 89.2%. As long as the state keeps the introduction of education in the first place, they can reach the top five soon. However, they would not be slip below the top 10. Fun fact: Bill Bill comes from Arkansas! (Image via Pinterest) Wisconsin is making active efforts to improve its high school graduation rates, and it's starting to pay off. Over the past five years, there has been an increase of 1.6%. Now up to 89.7%. It's quite unusual! The Associated Press also reported that there has been an improvement in small groups of students. One of the biggest gains is English-speaking learners reported a 4.5% increase over the previous year and a total of 12.4% over the past five years. Fun fact: Chris Noth called home in Wisconsin! (Image via Pinterest) Tennessee's Board of Education proudly acknowledged last year that the graduation rate for the 2018-2019 school year is 89.7%. That's half a percentage point more than the previous year and the highest graduation rate in the history of the state! In total, there are 183 additional students who have completed secondary school. Tennessee has achieved this by actually about many schools with a graduation rate of 100%, including Huntingdon, South Carroll, Bradford and Oneida school districts. Over the past five years, Tennessee has also never dropped below the 86% high graduation rate. Fun fact: Reese Witherspoon is from Tennessee! (Image via Pinterest) Initially, Alabama struggled to achieve a national graduation rate, averaging 5% lower. However, the completion rate has increased much faster than the statistics for the entire United States. The state proudly passed the nation in the 2013 school year, and has not yet let go of that record. Now Alabama's completion rate is as high as 90%. The Alabama State Board of Education had a goal to reach 90% by 2020, but they managed to beat that for two years. Alabama also closely measures college readiness and careers, unlike some other states. Fun fact: Courtney Cox is from Alabama! (Image via Pinterest) Over time, Texas students began to graduate in greater numbers. In autumn 2016, the graduation rate was 89.1%, which is pretty good (and certainly above the national average). If you jump to autumn 2019, this number will jump to 92.3%! It's very high! Since this percentage includes all four-, five-, six- and seven-year extended rates, the national record is slightly lower. This report only takes into account four-year graduation grades, so Texas has reached 90%. That's still pretty good. Fun fact: Matthew McConaughey is from Texas! (Image via Pinterest) Over the past two years, West Virginia has managed to maintain a completion rate of about 90%, landing at 90.2% in the 2018 school year. That's also compared with the previous year, which only managed to get 89.40%, according to West Virginia's Board of Education. According to WV's Board of Education, West Virginia is one of the where the five-year graduation rate (90.7%) is lower than in four years (91.4%). As As a still numbers, we wouldn't be surprised to see the state break their 90% streak and enter at 91% (or higher). Fun fact: Jennifer Garner called the House of West Virginia! (Image via Pinterest) The Atlantic City press was pleased to report in 2017 that the number of high school graduates has been steadily increasing year on year for six years in a row. We are pleased to announce that this trend remained at 90.9% in 2019. If you include five-year graduation students, it's even higher! They achieve a 92.5% graduation rate, according to the New Jersey Board of Education. Many districts achieved up to 100% of the rate when they included five-year students. Fun fact: Tom Cruise is from New Jersey! (Image via Facebook) Kentucky is another state that has not reported its high school graduation rates for each year to the Common Core Data project. It started in 2012, when the rate was 86%, which was higher than the national average at the time. In fact, they have been above the national average since they started reporting. Today, this graduation rate is as high as 91.3%. There are plenty of schools that need a lot of work and pull the result down, but the state has done a great job educating students. Some say students are trying harder, while others think it's a change of leadership. Fun fact: George Clooney is from Kentucky! (Image via Pinterest) Iowa is the best state in the country - when it comes to high school graduation statistics to go. Students in the state have proven to be some of the poorest as their rates have gone above and beyond each year over the past half decade. This is certainly not the first time Iowa has been a top dog. They scored 91.4% of students to complete high school. The Iowa Department of Education also reported data for the 2019 school year, and the stakes are going up! It is currently 91.6% for four-year graduates. If you look at five-year graduates, it hits 93.5%. Iowa raises some smart cookies. Fun fact: Ashton Kutcher is from Iowa! (Image via Pinterest) Author Alot Education Team Last updated: August 28, 2020 2020
