I have a troy-bilt portable generator of 6000 watts of 8250 starting watts. One of the wires has been disconnected from the 240 V container.3. Mechanic's assistant: When was the last time you cleaned or serviced your Troy-Bilt generator? Someone's rewired the 240 V container and done it wrong.2. Make sure that all cables are securely connected and connected to the appropriate screws. So if you have a 120V in both the upper and lower half of the container, but not in a 240 V container, there are only a few possibilities.1. From the 240 V container, one hot wire jumps to the top half of the 120 V container and the other hot wire jumps to the bottom of the container. How long has it been with your Troy-Bilt generator? Mechanic's assistant: Is there anything else we should know to help you best? When this device is switched on, the power comes from the stator, through a 240 V power breaker and into a 240 V container. I checked all the wires on the generator and the extension cord of the house.
