## Platinum to gold 5e

Gold is the grandfather of precious metals, at least from an investment point of view. But other precious metals, such as platinum and silver, have their place in the portfolio of experienced investors. These are property, plant and equipment of in-kind value. The Federal Reserve cannot print them any more. Both gold and platinum have their own unique characteristics. In this gold versus platinum, let's see which precious metal is a better investment and why. [caption id=attachment\_656139 align=aligncenter width=400] Pixabay /Public Domain/signature/Precious metals have attracted investors who want to diversify their portfolio of stocks, bonds and cash. For centuries, platinum has been considered a higher symbol of value and quality, primarily because it is rare and more difficult to mine. According to US funds, global gold production was 3,332 tonnes in 2018 compared to just 165 tonnes of platinum. GoldGold is by far the most popular investment among precious metals. Large and small investors buy gold to diversify their portfolios, especially in uncertain economic conditions where S&P 500 may be crashing. Yellow metal is durable, malleable and acts as a hedge against inflation. You can invest in gold by purchasing jewellery, coins, ingots, bullion, derivatives, futures and gold ETFs. Gold prices are going up when there is an economic crisis or slowdown as investors resort to the safety of precious metals. While it serves as a hedge against inflation, there is no growth potential. A 10g gold coin will still be a 10g gold coin even after years or decades. Jewellery accounts for almost half of the world's demand for gold. Yellow metal is also used in dentistry, electronics and aerospace. Central banks also hold gold in their official reserves because of their perceived value as an alternative currency. Since gold is a store of value, its price depends less on the laws of supply and demand and more on the mood of the people and institutions that collect it. When the economy is booming, investors sell gold to invest in stocks and other assets, which lowers its price. In volatile economic conditions, they rush to buy gold, pushing its prices up. Gold becomes the investment of choice when inflation is high. Wars and geopolitical tensions are also prompting investors to seek refuge in the yellow metal. PlatinumIf you look at the material value of precious metals, platinum sits on top. Glossy white metal is considered a strong symbol of value and quality. Platinum supply is much lower compared to gold. It is also much more difficult to extract than yellow metal. As an investment, platinum does not have as long a history as gold, which facilitates trade from ancient civilizations. Unlike gold, platinum is very malleable. It also has a number of industrial applications. The TThe TThe industry relies heavily on platinum to make catalysts for cars, buses and trucks to reduce emissions. It is also used in turbine engines, medical devices, computers and the oil industry. While gold is produced in dozens of countries around the world, almost all of the world's platinum is mined in only two countries – South Africa and Russia. Any political or economic difficulties in these countries can have a significant impact on the price of platinum. Or both countries could join hands to artificially inflate platinum prices. Platinum has a much wider use in the industry vs. gold. Thus, its value depends on the rights of supply and demand, not on investor sentiment. It behaves like other industrial metals such as silver and aluminum. The value of platinum is correlated with the performance of the economy as a whole. If economic and political conditions are stable, industrial demand for platinum is increasing. Like its prices. In times of weak economy, demand for vehicles, turbine engines and heavy machinery is declining. This causes platinum prices to fall. The automotive industry also influences platinum prices, as it accounts for almost half of the world's platinum consumption. When Volkswagen's emissions scandal came to light in 2015, demand for diesel engines began to decline. As a result, platinum prices fell by as much as 15% in three months. Gold vs Platinum: Price and LiquidityIn the long run, gold and platinum tend to move in the same direction. But there are factors that affect any precious metal independently. The value of platinum depends on supply and demand, while the value of gold is largely based on investor sentiment. Gold's status as a safe haven pushes prices up during periods of economic uncertainty. And platinum prices are falling due to declining demand. Conversely, it is observed during periods of sustained economic growth. At the time of writing, platinum was trading at \$986.31 an ounce compared to the spot price of gold at \$1,568.40. In the current economic scenario, platinum is vulnerable to fluctuations in both supply and demand. Gold prices have gone up due to U.S.-China trade tensions and weak global economic growth. The price difference between the two precious metals is the inter-trading spread. Sometimes gold trades with a platinum bonus, and sometimes white metal commands a bonus. The gold-platinum ratio not only helps us understand the relationship between them, but also gives clues to market sentiment. Platinum is cheaper than gold if the ratio is above 1 and vice versa. Both gold and platinum are highly liquid assets. You can easily exchange them for cash. They both trade over-the-counter and physical markets around the world. Gold vs Platinum: What's More Valuable? Investment opportunities arise when there are divergences in relation to the (gold price platinum). Historically, this ratio was lower than 1, which means that the price of platinum was higher than gold. But currently the ratio is about 1.6, which means that platinum is cheaper and more attractive. Both gold and platinum are precious metals, but there are factors that independently affect each of them. And it's platinum that's becoming unbelievable. Gold trades based on investor sentiment, not supply and demand. It is relatively less volatile than platinum. Another aspect to consider is that only two countries - South Africa and Russia - produce platinum. What is happening in these two countries will have an impact on platinum prices around the world. When South African mines struggled with energy supply problems, platinum prices rose to \$2,252 an ounce in March 2008. Turbulence in the automotive industry can also affect platinum prices. We have not seen such erratic fluctuations in gold prices. Dozens of countries including China, USA, Australia, India, Canada and others produce yellow metal. The issue of deliveries in one country is unlikely to have a huge impact on prices around the world. Despite the debate on gold and platinum, the former remains the preferred storage of value. But the yellow metal recorded an 18.9% return in 2019. Given its relative valuations, investors can take a look at alternative precious metals such as platinum. Disclosure: I have some physical gold. No other items and no compensation Business Investor DailyDow Jones futures changed little late on Tuesday after a rally in the stock market ran into stimulus to check the blockade. Apple shares hit a new point of purchase. How much will you get - and when? Investor's Business DailyThe Dow Jones, S&P 500 and Nasdaq composite showed slight losses in afternoon trading, but small capitalizations fell sharply, with the Russell 2000 down more than 2%. Moderna shares fell sharply, dipping 40% from their highest this month to a recent low. The charts show an opportunity for investors. Do you have a question about your pension, including where you live? Email us at HelpMeRetire@marketwatch.comWestor's Business DailyThe best dividend stocks give a powerful boost to your income and retirement portfolios. These stocks offer both solid yields and good results. Investor's Business DailyIf you lose \$609 billion when everyone else is up 14.5% - it's a bad year. This is exactly what happened to some S&P 500 shares in 2020.DEEP DIVE While the stock market plunges in March, it may be hard to expect 2020 to end as a good year for stocks, but unusually low interest rates from the Federal Reserve, unprecedented federal spending to support the economy and investor enthusiasm for technology stocks not only that. Wall Street has mixed feelings to penny stocks. These tickers change hands for less than \$5 per share to either attract investors with their high return potential or they run around the hills, but why? When we talk about high return potential, we do not overdo it. Bargain prices allow investors to attract more shares than possible by investing in other more familiar names. Moreover, even what seems like a trivial increase in share prices can translate into huge percentage gains. That said, there is a legitimate reason why some investors are cautious when it comes to penny stocks. The risks associated with these pieces deter the weak, because very real problems, such as weak bases or overwhelming winds, can be masked by low stock prices. So, how should investors approach a potential penny stock investment? Taking a signal from the analyst community. These experts bring in-depth knowledge of the industries they cover and considerable experience. With that in mind, we used the TipRanks database to find two attractive penny stocks, according to Wall Street analysts. Both markers boast a strong buy consensus rating and plenty of potential upside down. Matinas BioPharma (MTNB) Using lipid nanocry crystal platform (LNC) delivery technology, Matinas BioPharma hopes to address the complex challenges of oral delivery of small molecules, gene therapies, vaccines, proteins and peptides. Currently going for \$0.87 apiece, several Street members believe its share price represents an attractive entry point. Writing for BTIG, 5-star analyst Robert Hazlett points to MAT2203 as a key part of his bullish thesis. The therapy was designed as a liposomal nanocrystic (LNC) version of a broad spectrum of antifungal amphotericin B that allows oral delivery of the drug. Ahead of phase 2 of the EnACT study evaluating a candidate for cryptococcal meningitis, with registration for Cohort 2, which is expected to begin in the near term, and further DSMB data are expected in mid-2021, Hazlett points out that this is the first of potentially several indications with a novel antifungal drug. Further clarifying his optimism about therapy, Hazlett stated, the Independent DIRECTIVE DSMB unanimously recommended moving to a second cohort of patients in enact, which is a validating event for MAT2203 because progress in cohorts is assessed by the rate of CSF fungal clearance and the lack of fungal reflection, and progress by the EnACT cohorts signals MAT2203 activity and its successful passage through the blood brain barrier (BBB) to maintain a reduced number of fungi in CSF. Additionally, registration for ENHANCE-IT, a head-to-head mat9001 trial compared to Vascepa Amarin, has been completed. MAT9001 is an mtnb free fatty acid formulation of EPA and DPA, and according to Hazlett, generates much higher VE blood levels of the EPA than Vascepa.If that wasn't enough, the company recently announced a partnership with NIAID for a study (LNC) in the form of glead rmedmdevir as an oral form of treatment with COVID-19. We believe that this cooperation further confirms the LNC Matinas technology, commented Hazlett. In line with his bullish stance, Hazlett's MTNB buy price, and his \$5 target price means a place for a staggering 474% growth potential over the next 12 months. (To view Hazlett's achievements, click here) Turning now to the rest of the Street, other analysts echo Hazlett's sentiment. Since only buy recommendations have been published in the last three months, MTNB has reached consensus with Strong Buy analysts. With an average stock target price of \$4, stocks could rise 359% from current levels. (See MTNB inventory analysis on TipRanks) Using an in-depth understanding of immunology and its role in the disease, Equillum develops innovative therapies for severe autoimmune and inflammatory diseases. With stock trading at \$4.25, some analysts believe now is the time to pull the trigger. After The Company's Analytics Day, highlighting its clinical programs for monoclonal itolizumab anti-CD6 antibodies, Leerink analyst Thomas Smith remains optimistic about his long-term growth prospects. During the event, EQ published individual patient responses along with biomarker analyses that were published based on recent positive interim data from the first three cohorts of the Phase 1b EQUATE study examining itolizumab in acute graft and host disease (aGVHD). In the future, the company wants to conduct dose expansion in cohorts 2 and 3, enrolling three additional patients in each cohort, with the best results from the study expected in 1H21. Looking at preliminary data from the Phase 1b EQUATE study, Smith's opinion showed rapid, deep and sustained responses to itolizumab in aGVHD. For the updated data, 80% overall response rate (ORR) occurred at all doses on day 57, with 8 out of 10 patients achieving a complete response (CR). Moreover, therapy has also been associated with the possibility of cones and dose reduction to reduce systemic steroid use in patients. These results were consistent with biomarker data indicating that itolizumab rapidly reduced CD6 expression in CD4 and CD8 T cells. We believe these results are compelling and supporting EQ plans to extend the dosage to additional patients with GVHD at doses of 0.8 mg/kg and 1.6 mg/kg, Explained Smith. As if that weren't enough, EQ presented preclinical and translational studies supporting phase 1b of EQUALISE studies of itolizumab in systemic lupus erythematosus (SLE) and renal lupus (LN), and Smith expects the results of the top line in SLE to appear in 1Q21 and intermediate results in LN in 2H21. To this end, Smith buy along with the \$18 target price. If this target were achieved in the coming year, investors could gain ~328%. (To view Smith's achievements, click here) What does street need to be said? 3 Buys and does not own or sell add to a strong consensus rating purchase. Given the \$15 average target price, shares could skyrocket 328% in the coming year. Disclaimer: The opinions expressed in this article are solely those of the analysts described. This content is for informational purposes only. It is very important to do your own analysis before making any investments.2020 was a year of monster profits for individual shares, with companies like Tesla seeing triple-digit growth. Congress passed a relief bill on Monday and is waiting for President Donald Trump to give his doubts a relatively modest sign of stimulus, among other concerns, and on Sunday signed a massive pandemic relief bill, preventing a government shutdown in the process. At the same time, the new stimulus control kit has several new rules for certain scenarios, such as for people who are lagging behind on alimony or married to a non-citizen. Treasury Secretary Steven Mnuchin said Monday these economic impact payments could start arriving in bank accounts next week. Investor's Business DailyAlibaba Group and other Chinese shares jumped Tuesday as the e-commerce leader indicated that progress had been made in overhauling the business of online finance giant Ant Group. (Bloomberg) - Sheila Patel, president of Goldman Sachs Group Inc.'s asset management unit, is leaving the \$1.8 trillion division after nearly two decades at the company. Patel, 51, is one of the company's most senior women and shepherds some of Goldman's highest profile relationships with investors around the world. She will step down from the partnership and become advisory director in the new year, Chief Executive Officer David Solomon said in a memo to employees Monday. Sheila has contributed to our culture, including serving as a mentor to many Goldman Sachs professionals around the world, Solomon said in a note. I can't wait to get her further advice. Patel rose to Goldman's highest ranks in 2006 when she became a partner within three years of joining the company. He is a member of the bank's management committee in Europe, but oversees the rapidly growing areas of investment in environmental, community and governance protection and investment impacts. Prior to joining asset management, she worked in various positions in the stock division, including as co-head of distribution in Asia and head of sales of U.S. derivatives. Goldman's partnership ranks are shrinking, with many longtime managers departing in recent years. In year, the company has added the fewest partners since 1998, which can reduce costs as an elite tends to appear with significant perks. The asset manager is also facing huge changes. Tim O'Neill, a key leader in the department since 2008 and a partner since the 1990s who helped turn the company into a behemoth, has been moved to a senior advisory role in recent months, while Eric Lane and Julian Salisbury have been assigned to co-manage assets as it adds more commercial and banking opportunities. The bank is trying to increase its presence in private fundraisers. Meanwhile, industry leaders including co-head of quantitative investments Gary Chropovka and Kane Brennan, who oversaw the company that worked with pension funds, announced their departures from mid-2019. Patel was elevated to the company's management committee in 2018 as part of Solomon's first major personnel move after being appointed CEO, increasing the number of women in the company's most senior management body. (Updates from previous departures starting in the sixth paragraph.) But the president still wants \$2,000 in control. Investor's Business DailyApple stock notched a record high on Tuesday after an analyst predicted it would be the best performing FAANG stock in 2021. This would be the third year in a row at the top of the group for Apple.Investor's Business DailyLong-sick Ford is facing new coronavirus challenges with demand and supply chains. But is Ford prepared to return? Here's what you need to know. Investor's Business DailyElectric-vehicle manufacturer Kandi Technologies inked a loan financing agreement with one of China's largest state-owned banks. Returns wise, Novavax (NVAX) has undoubtedly been the most successful firm coronavirus of them all, with 2020 profits hitting an incredible 2920%. However, heading into the final episode of the year, vaccine specialist NVX-CoV2373 has been in danger of getting cut off from competition. Both Moderna (MRNA) mRNA-1273 and Pfizer (PFE) / BioNTech (BNTX) BNT162b2, have already been granted emergency use authorization and are already distributed in the U.S. and worldwide. But now Novavax can finally work to close the gap. Finally, on Monday, the company announced a U.S.-Mexico Phase 3 study to lift off. The PREVENT-19 study evaluating NVX-CoV2373 was launched in 115 locations and 30,000 participants are expected to enroll in the program. With more than 25% of participants over the age of 65, and black/African American patients representing an additional 15%, the study was specifically designed to assess the vaccine candidate's impact on such a diverse population, possible. Novavax has already fully incorporated a Phase 3 clinical trial in the UK with a temporary reading of the data Soon. The company may be lagging behind the competition, but its offer has unique properties that distinguish it from vaccines already available. Unlike the Moderna vaccine, which must be stored in the freezer and offers Pfizer/BioNTech, which requires even more extreme ultra-low temperatures, NVX-CoV2373 can be refrigerated. B.Riley analyst Mayank Mamtani says the first temporary reading of data from the U.S. study is likely in early 2Q21. The analyst believes novavax's offer could still play a major role in the global distribution of Covid-19 vaccines and tells investors to buy the recent decline. We remain sympathetic to our best-in-class NVAX bull case scenario, which translates into 90% + VE and a differentiated target product profile in terms of reactivity to 2373 as the preferred global vaccine solution, said a 5-star analyst. We believe that nvax's capital weakness of 12/28 (-10%), largely attributed to AZ's positive comments on AZD1222, which were reviewed by UK regulators this week, is an attractive opportunity to buy. Therefore, Mamtani's rating remains a buy, while the target price of \$223 also remains. If the target is reached within the next 12 months, the cards may show a profit of 85%. (To view Mamtani's achievements, click here) Ban 1 Sell, all 5 other current opinion analysts rate Novavax to buy. NVAX's Moderate Buy consensus rating is backed by a \$183.20 average price target, which means a potential 52% increase in the coming year. (See NVAX inventory analysis on TipRanks) To find good ideas for trading coronavirus stocks at attractive valuations, visit TipRanks' Best Stocks to Buy, a newly launched tool that combines all of TipRanks' capital insights. It is very important to perform your own analysis before making any investments. Julian Emanuel, BTIG's chief equity and derivatives strategist, explained to CNBC in an interview why the stock market is inflating to champagne levels of the doomed dot-com era in 2000, and why it might not be that bad. Bitcoin growth was one of the best threads of 2020.What Happened: Bitcoin reached record highs in December, passing the level of 27 000 USD on December 27. With the increase in the price of the cryptocurrency, the market capitalization of bitcoin exceeded the level of several financial companies. Earlier in 2020, bitcoin was passed by JPMorgan Chase (NYSE: JPM) and Mastercard Inc. (NASDAQ: MA). Over the weekend, bitcoin's market capitalization exceeded \$500 billion and More valuable than Visa Inc. (NYSE: V). Related link: 8 stocks to play Bitcoin's ResurgenceWhy It's Important: According to AssetDash, Bitcoin is currently the 11th most valuable asset by market capitalization, with Valuation. Bitcoin passed four companies on the list in the month of December.Up next on the list is Berkshire Hathaway (NYSE: BRK-A) (NYSE: BRK-B), led by legendary investor Warren Buffett. Oracle of Omaha was a vocal bitcoin. Buffett once said that bitcoin is probably a rat poison to square. When it comes to cryptocurrencies, I can generally say with almost certainty that they will come to a bad end. If I could buy five years to put on any of the cryptocurrencies, I'd be glad to do that, but never have a short dime worth it. Buffett told CNBC in 2018.Berkshire Hathaway ranks 10th on the list of assets with a market capitalization of \$535.7 billion. With 18 583,275 bitcoins owned, the price would have to be \$28,827 to pass on the value of Berkshire Hathaway. With additional bitcoins mined and the cryptocurrency continues to grow, it can happen very quickly. Apple Inc. (NASDAQ: AAPL) topped the AssetDash list with a market capitalization of \$2.3 trillion. Alibaba Group (NYSE: BABA) ranks eighth with a ceiling of \$602 billion, and fell three places in the month of December. Price Action: Bitcoin was trading at \$26,714.06 in its last check Monday. Grayscale Bitcoin Trust (OTC: GBTC) ended Monday's session up 11.33% at \$30.45 and is more than 200% higher in 2020.
