Social security office omaha fax number

A Social Security Number (SSN) is a nine-digit number issued by the U.S. government to U.S. citizens, permanent residents, and other qualified individuals. Founded in 1936 to uniquely identify U.S. workers to determine the distribution of Social Security benefits under the new Social Security program, the use of Social Security numbers has since expanded as a leading way to gather information about a person, including tax records, as well as medical and employment history. It is also often necessary to get a job and to receive social benefits and other government services. How SSNs are generated Social Security numbers have a three-part composition: AAA-GG-SSSS. The first three digits, the area number, were originally assigned by region. The next two digits, the group number, were originally used as an administrative distribution tool in 1936. The last four numbers, the serial number, are a straight numeric number series of 0001 9999 within each group. In order to protect the integrity of the SSN and maintain the longevity of the nine-digit system, the Social Security Administration changed the way SSNs were issued to randomization in 2011. The new approach eliminates the area number, eliminates the meaning of the highest group number, and previously unassigned area numbers were introduced for assignment without area numbers 000, 666, and 900-999. Anyone who receives an SSN since the introduction of the Social Security number has been used to provide a record of the number issued to a person. Currently, three types of cards are issued: the most common Social Security card is issued to U.S. citizens and permanent residents, and includes the cardholder's name and SSN. Persons who are legally admitted to the United States under a Department of Homeland Security (DHS) work permit will receive a card with your name, Social Security number, and a VALID FOR WORK ONLY WITH DHS AUTHORIZATION restriction. For people who are legally admitted to the United States without a DHS work permit but have a valid reason for an SSN or require a number because a federal law requires a Social Security number to receive a service or service, you will receive a card that includes the NOT VALID FOR EMPLOYMENT restriction. Persons who meet all requirements can apply for a social security number via the Social Security Administration using the SS-5 form. SSN and Personal Privacy Social Security numbers are widely used as Form of identification and authentication of personal data (PII), making it vulnerable to data protection and cybersecurity breaches, including phishing and hacking. SSNs are often housed in computer networks of government agencies and private organizations that are constantly confronted with cyberattacks. Are. a wide range of identity theft and medical, tax and bank fraud. As a result of the ongoing threat of major data breaches, calls to eliminate the use of SSNs as identification and authentication have increased. National and local governments have implemented privacy policies that limit what personal data can be collected and used, while organizations need to be transparent about how they use personal information when creating privacy policies and agreements that allow individuals to choose or disable. In 2018, the European Union introduced the General Data Protection Regulation (GDPR), which outlines strict privacy policies and restrictions, while in the United States, California's CALIFORNIA's Consumer Privacy Act (CCPA), HIPAA (Health Insurance Portability and Accountability) and the Payment Card Industry Data Security Standard (PCI-DSS) provide privacy for the use of personal data with consumer data, medical records and credit card transactions. SSN alternatives In addition to government-led restrictions on the use of SSN, alternative forms of technology-based ID have been proposed and implemented worldwide, including the use of encrypted electronic ID cards and the implementation of biometric identifications such as fingerprints, voice control, irises, and facial recognition scans for authentication at financial and government institutions. The fear of the irreplaceability of biometric data, as well as the possibility that hackers or ID thieves are imitating voice IDs, has been tempered by the introduction of anti-spoofing technology, which is so advanced that it knows if someone fraudulently pretends to be someone else. Your nine-digit Social Security number is your first and continuous connection with Social Security. It helps us to identify and accurately record your covered wages or pay cards for the self-employed. We also use it to monitor your record as soon as you start to get benefits. Why do you need one? A Social Security number is important because you need it to get a job, receive social security benefits, and other government services. You should keep your Social Security card in a safe place with your other important papers and avoid issuing them unnecessarily. Keep in mind that in many cases, even if you've lost your card, you may not need a replacement. In most cases, simply knowing your Social Security number is enough. But if you need a replacement, we make it easy for ourselves. For REAL ID document purposes, you may not need a Social Security Number (SSN) to prove an SSN. Instead, an up-to-date pay slip, W-2 (payroll and tax statement), SSA-1099 (social security benefit statement), or other tax documents that contain your full name and all of your SSN can be acceptable proof of your SSN. You can apply for a replacement card online you can use an account with my Social Security to apply for a replacement social security card if you: Are you a U.S. citizen 18 years of age or older with a U.S. postal address (including APO, FPO, and DPO addresses); Do not request a name change or other change to your card; and have a driver's license or a government-issued ID card from one of the many participating states or the District of Columbia. Note: In Alaska, Delaware, and Wisconsin, this service is only available if you have a driver's license. If your driver's license or government-issued ID card has been issued by one of the states listed below, this service is not yet available. If your status appears in this list, please check back. We are working to make this service available to other states. Minnesota Nevada New Hampshire Oklahoma West Virginia This service is also not yet available if your driver's license or ID card has been issued by a U.S. territory (such as American Samoa, Guam, Northern Mariana Islands, Puerto Rico or the U.S. Virgin Islands). If you are a U.S. citizen and have not recently received a replacement card or name change, you may not be eligible to use the online replacement card application in my Social Security. If you don't have an account for my Social Security, you can create it today. To set up your account, go to: Sign in or create an account If you don't qualify for an online application for a card, please follow the instructions in the next section. How to make a new, replacement or corrected card important: All documents submitted must be either originals or copies certified by the issuing body. We cannot accept photocopies or notarised copies of documents. Receive a certified copy of a document showing a birth, marriage, or divorce that has taken place in the United States. Note: If you submit an application on behalf of another person, you must also provide us with proof of your relationship or responsibility for that person. You must also provide us with proof of identity. Free social security services Some companies offer social security compensation or cards. Social security provides these services and more free of charge. Don't pay for something we give you for free. Social security is the best place to get information about social security. The hands of older people who have a Social Security card If you ever applied for a credit card or completed an application, you were probably asked for your Social Security number. This unique Number issued by the Social Security Administration is one of your most important identification information. There are several ways your Social Security number is used, and several important reasons why you need to have one. If you've ever wondered what the purpose of these numbers is, how they're allocated, or how you can use your Social Security number, take a closer look here to see how they work. Social Security number, definitionA Social security Social security is a unique nine-digit code that is used to identify you and track your earnings throughout your life. These figures were first introduced in 1936 to track the earnings history of U.S. workers. According to the Social Security Administration, more than 450 million Social Security numbers have been issued, and there are more than 420 million numbers available for allocation. Social security numbers may be issued by the Social Security Administration at birth. They are also available to legal residents. They are printed on a paper card and sent to you. Social Security numbers have three components:Area Number: This is the first set of three digits. Group number: This is the second set of two digits. Serial number: This is the third set of four digits. Your area number is assigned by your geographic region. This is based on the zip code used to apply for a Social Security number and does not necessarily represent where you were born or where you live. The group number corresponds to your area number and can be between 01 and 99. These numbers are assigned odd/even. The serial number is a set of four digits from 0001 to 9999.As of 2011, the Social Security Administration decided to randomize the allocations of Social Security numbers. The most notable change is that the area number no longer has a geographical meaning, depending on where you live. Social security numbers, social security benefitsA social security card Social security numbers were created first to track workers' earnings to help determine the social security benefits they would receive after retirement. This is still a major function of social security numbers today. Social security benefits are usually calculated on the basis of your average indexed monthly earnings, which take into account up to 35 years of income. So, for example, if you get your first job at the age of 16, the Social Security Administration will start tracking your earnings history from that point on. Their actual earnings are adjusted or indexed to take account of changes in average wages over time. The Social Security Administration uses these adjusted wages to calculate your basic benefit, i.e. the amount you would receive once you reach full retirement age. The full retirement age depends on the year in which you were born. For someone born in 1960 or later, it's 67. If you wait until the full retirement age to receive benefits, you will receive the full for which you are eligible. But you can technically start receiving social security pensions at the age of 62. However, this will reduce your benefit amount. On the other hand, you can delay the use of social security benefits until the age of 70, which can increase your benefit amount. Other uses for Social Security numbersApart from social security benefits, there are other ways, such as your Social Security Social Security can be used. For example, you usually need a Social Security number if you want:Open a bank account on your behalfApply for federal or private student loansApply for a credit card on your behalfApply for a home loan or car loanApply for a jobQualify for a jobQualify for state or federal benefits or financial supportGet a passportGet a passportGet a passport if you apply for mobile phone or utilities on your behalf, rent a car or sign a lease for an apartment. This is because of the way Social Security numbers are used for credit assessment. Your credit score is a three-digit number based on the information in your credit reports. This information is reported to credit bureaus by your lenders or billing agencies. Credit reports contain both financial information, such as .B account activities, and personal information. One of the most important personal information used to identify you for credit reporting and valuation is your Social Security number. Your entire credit history is tied to this number, which is why it is so important to protect it. If someone is receiving your Social Security number and other personal information, such as your date of birth, it is possible that they could open fraudulent credit cards, loans, and other accounts on your behalf. Identity theft can be stressful to solve, and it can cause severe credit score damage if someone runs significant debt on your behalf. You can protect your Social Security number by keeping your Social Security card in a safe, e..B. in a safe or safe at your bank, by storing all physical documents containing your Social Security number in a safe place, and digital documents stored on your computer or phone that contain your Social Security number, and be careful who you share your Social Security number with. Think carefully before sharing your number over the phone or email with someone you don't know without first checking to see if it's a trusted source. So if you send an email to your Social Security number, call the bank directly to make sure the request is genuine. How to obtain a Social Security number To obtain an original or replacement Social Security number and card for a U.S.-born citizen, you must complete an application with the Social Security Administration and provide documentation. This includes: An original birth certificate (photocopies are not accepted)A U.S. passport or official hospital record of your birth if you don't have a birth certificateOfficial ID, including government-issued ID cards, military ID cards, school passes, or health insurance cards. When you apply for a social security number for a child, the permitted identification forms are: doctor, clinic or hospital recordOfficial birth certificate Acceptance decree Birth certificate Acceptance decree card/recordDaycare recordsReligious recordsYou must also prove your own identity. There is no fee to receive a new or replacement Social Security card. You can continue your application to your local social security office to complete the process. Online applications are accepted, but only if you are 18 years of age or older, with a U.S. address and a government-issued ID. You can apply online through your My Social Security account. The Bottom LineSocial Security applicationYour Social Security number is a unique nine-digit number issued by the Social Security Administration. It plays an important role in your daily and financial life when it comes to things like a job, credit approvals and retirement. Knowing your Social Security number – and how to keep it safe – is important if you manage your finances in the short and long term. Tips for InvestingThink in conversation with your financial advisor about social benefits and where they fit into your retirement savings. If you don't have a financial adviser yet, it doesn't have to be complicated to find one. SmartAssets Financial Advisor Matching Tool can help you. If you answer a few short questions online, you can get personalized recommendations for consultants in your area. When you're ready, start now. Social security planning is important, especially if you are married or unsure when to start taking social security benefits. Married couples have different ways to maximize their benefits based on each spouse's income history. While early access to benefits could provide a much-needed income for retirement, you could reap a greater benefit by waiting longer to file a Social Security bill. (Bloomberg) -- The white-knuckle bitcoin ride took another turn Monday as the worst two-day slump in the digital currency since March stoked concerns that the polarizing cryptocurrency boom could get out of hand. Bitcoin, the largest cryptocurrency, slipped as high as 21% to 32,389 U.S. dollars over the course of Sunday and Monday. This is the biggest two-day slide since the pandemic first slumped global markets last year and follows a record high of almost US42,000 on January 8. It is to be determined whether this is the beginning of a major correction, but we have now seen these parabolic breaks, so it could be easy, said Vijay Ayyar, head of the at the crypto exchange Luno in Singapore.Bitcoin's price has more than quadrupled in the past year, reminiscent of the mania of 2017, which made cryptocurrencies a well-known name for the first time before prices collapsed just as quickly. Time to take some money off the table, Scott Minerd, chief investment officer at Guggenheim Investments, said in a tweet from his verified Twitter Twitter Bitcoin's parabolic rise is unsustainable in the short term. Minerd at the end of December predicted bitcoin could eventually reach 400,000 dollars.True believers in Bitcoin argue that this time the rally is different from past boom-bust cycles, because the asset has matured with the entry of institutional investors and is increasingly seen as a legitimate hedge against dollar weakness and inflation risk. Others fear that the rally will be freed from reason and fueled by large amounts of fiscal and monetary stimulus, with bitcoin unlikely to serve as a viable currency alternative. Bitcoin is almost certainly in a different bubble and its current growth rate is unsustainable, Howard Wang, co-founder of Convoy Investments LLC, said in a January 10 statement. While it may mature in the future, Bitcoin as it exists is largely a speculative asset. Read: How Bitcoin compares itself to history Big BubblesBitcoin has shrugged off recent slumps and can do so again, potentially recovering up to 44,000 dollars before the actual correction, Luno Ayyar said. Bitcoin held .m in London at 7:08 a.m. Rival digital assets are also collapsing, with the second-largest coin Ether plummeting by up to 21%. Read: Does Bitcoin Boom Mean Better Gold or Bigger Bubble? QuickTake(updates with additional details and minerd comment.) Learn more about the financial marketBitcoin fell sharply early Monday after failing to establish a foot above 40,000 dollars over the weekend. Nio Inc (NYSE: NIO), which focuses on the premium segment, could prepare for mass-produced vehicles, the company's chief executive William Li suggested on Sunday, as reported by Reuters. As EV technologies evolve and battery costs fall, it's possible that we're entering the huge market, but definitely not with the Nio brand, the CEO said. Why It Matters: Nio launched its first sedan called ET7 over the weekend. The standard edition of the vehicle costs 69,185 US dollars before subsidies. The sedan will beat Nio against high-end competitors, but not market leader Tesla Inc (NASDAQ: TSLA). The car could also compete with an EV from Apple Inc (NASDAQ: AAPL), which, according to an unconfirmed report, was already a with the Korean Hyundai Motor Company (OTC: HYMTF). Is. Action: Nio shares closed nearly 8.5% higher at US58.92 US cents on Friday, gaining 0.24% in extra time. Investors have a clear task ahead of them: to find the stocks that will rise with an approaching bull market. The performance so far is not a guarantee of future profits, of course, but the stocks that have grown rapidly in recent months are a logical place to look for tomorrow's winners. Of course, there are concerns about the newly Democratic-controlled U.S. Senate, which will give the new Biden administration a chance to implement its tax-raising plan, and the poor employment figures in December; will they come together to derail the strong upward trend of the market? Not so fast, says Jonathan Golub of Credit Suisse. The company's chief equity strategist has raised its outlook for the end of 2021, rising from 4,050 to 4,200. Golub first points out that the Democratic candidates won both Senate seats in Georgia in the recent runoff, a development that gives the Dems effective control, albeit with the narrowest possible margin, of both chambers of Congress. The new Biden administration has pledged to both sign a formatted COVID aid package and reverse President Trump's policies. Congressional control is a necessary condition. Golub said this should lead to additional incentives, including the expansion of payments to individuals. The second point that Golub notes as an important supporting event for the markets is the COVID vaccination programme. Although he called the program's slow progress overwhelming, he adds that economic activity will increase as the population of vaccinated individuals increases. The main economic effect of the In Golub's view, it is a likely avalanche of pent-up consumer demand that cannot be ignored. Golub describes this demand and says: In the second half of this year we will have the largest stimulating event in the history of the planet... Before the start of the second half, the strategist now sees to buy them. And that brings us back to growth stocks. We used the TipRanks database to identify three exciting growth names, according to the analyst community. Each ticker backed by analysts will generate even more profits in addition to its already impressive growth. Innovative Industrial Real Estate (IIPR)The increasing normalization of the cannabis industry in the USA has opened up a number of opportunities for forward-looking companies. Innovative industrial real estate is one of them. This company is a real estate investment trust with a twist – it focuses on real estate in the medical cannabis sector. Like most REITs, IIPR owns, manages and rents real estate – but its target client base consists of experience, state-licensed, medical cannabis operators. The company's portfolio consists of industrial greenhouses that are rented out as cultivation facilities for medical cannabis suppliers. The value of this niche is determined by the development of equities. IIPR shares have risen 137% in the last 52 weeks. Financial performance was in the best possible way of performance; Revenue has continued to grow over the past two years, quarterly, and in the third quarter of 20, the last reported, reached 34.33 million U.S. dollars. This was an increase of 197% on the previous year. In the first and second quarters of 2020, there was a slight drop in earnings during the coronation panic, but the company's Q3 EPS reversed that, and the 86-cent pressure increased by 59%. Piper Sandler analyst Daniel Santos sees a momentum building in the cannabis industry, especially now that the Senate has switched to Democratic control. COVID has created its own tailwind as states race to fill budget holes with alternative tax sources. While this could lead to a more liberal licensing issue, management seemed confident that most states would opt for a limited licensing program and would prefer existing operators - a big boost for IIPR... Strong fundamentals from operators and demand from institutional investors may lead to an increased pace of acquisitions, Santos said. Santos rates IIPR as overweight (i.e. buy), and its price target of 250 dollars implies a 40% increase over the next 12 months. (To see Santos' track record, click here) Overall, IIPR has 7 recent valuations on record, which collapse to 5 buys and 2 holds, giving the stock a moderate buy analyst consensus rating. The shares have recently appreciated rapidly and are now trading at US178.44 US dollars. (See IIPR stock analysis on TipRanks) Par Technology Corporation (PAR)Par Technology offers in the hotel industry and provides software, hardware, support services and other resources. PAR applications include point-of-sale software, content management, business intelligence, food safety monitoring, sales terminals, and video monitors. Par's restaurant segment operates in 110 countries and has more than 100,000 user installations. The company also includes a segment of government services, services, services and system design of the Federal Government. PAR is an important contractor of such services with the Ministry of Defence. The growth of this company was impressive last year. The 52-week profit is 103%, reflecting the need for strong online support for PAR's target customer base as it seeks to recover from the COVID downturn. Revenues in the third quarter of 2020 recovered from a slight decline in the first half of the year, reaching a two-year high of USD 54.8 million. Among the fans is BTIG analyst Mark Palmer, who wrote: While we expect PAR's restaurant and retail revenues to grow by about 20% over the next three years, we expect the Brink software business to grow in a 40% context over this period... As PAR performs its transition to cloud software/SaaS mode, its rating should grow to better reflect the recurring nery nature of its subscription-based revenue and margins associated with its software offerings. In line with his comments, 5-star analyst PAR a Buy rates along with a price target of 80 dollars. This figure shows his confidence in a 29% increase in the stock in the one-year period. (To see Palmer's track record, click here) PAR has strong support from the rest of the road. With the exception of a single hold, all 4 other analysts who have published a valuation in the last 3 months recommend the PAR share as a buy. (See PAR stock analysis on TipRanks) Maxlinear, Inc. (MXL)The semiconductor sector is a major industry, and Maxlinear produces chips for a variety of roles: wireless and data center infrastructure, industrial connectivity and IoT apps, cable broadband, and WiFi 6 networks. Maxlinear products can be found in digital TVs, mobile devices, PCs and netbooks. Semiconductors have cracked in recent months, and MXL shares are no exception. Shares have risen 81% since then in January last year, and this time frame includes heavy losses in February and March. The shift to remote work and virtual schools has placed a high value on fast and reliable connections, which in turn has increased demand for the underlying chipsets. In the third quarter of 20, Maxlinear's top line jumped to USD 156 million, a profit of 140% and a profit of 95% over the previous year. As a driver for earnings, the company is more demand for broadband and connectivity products from The 20th quarter 200. Suji DeSilva, 5-star analyst at Roth Capital, is flat bullish on this stock, and his commentary makes this clear. We believe that MXL differentiated investment opportunity in broadband and network RF and mixed-signal opportunities. We believe that MXL sees a persistently strong demand for connected homes, reinforced by ongoing S-Remote work/learning. We expect MXL's fundamentals to benefit from the acquisition of CY21, DeSilva said. DeSilva sets a price target of 50 dollars and a buy rating on MXL shares. Its aim suggests that to 34%. (To see DeSilva's track record, click here) All in all, the word on the road at this chip maker sounds largely bullish, with TipRanks Analytics demonstrating MXL as a moderate purchase. The stock has 7 reviews on record, with a 5 to 2 split between buys and holds. (See MXL stock analysis on TipRanks) To find good ideas for growth stocks traded at attractive valuations, visit TipRanks' Best Stocks to Buy, a newly introduced tool that combines all the stock insights of TipRanks. Amazon and Walmart have found that for some goods, it is often cheaper to refund the purchase price and let customers keep the products. This list is just a brief summary of the fascinating culture and history that China has to offer. Investor's Business DailyThe stock market rally looks extended with Tesla in a peak. Nio is a buy when the Chinese EV manufacturer unveils a luxury car, Exxon's mega-oil discoveries in Guyana could only be the beginning of a long series of hydrocarbon discoveries in the Guyana, Suriname Basin (Bloomberg Opinion) -- U.S. government bond yields have seen some notable moves in the early days of 2021. If they continue their current pace, they run the risk of headaches for both policymakers and equity investors because of their underlying drivers. In less than two weeks, the Treasury yield curve has described a significant increase in yields on longer-dated bonds or as a bear in financial markets. Yields on 10- and 30-year bonds have risen by 20 basis points and 22 basis points respectively over this period. Spreads between these maturities and the two-year Treasury bill, over which Federal Reserve policy has a significant impact, have widened significantly – from 80 basis points to 98 basis points for the 10-year and from 152 basis points to 174 basis points for the 30-year year. These steps come as Fed policymakers have consistently tried to significantly suppress yields and keep them in a tight trading band. If the steps continue, they would also challenge some of the strong drivers of funds in equities and other risk assets by reducing their relative attractiveness and weakening the buying signals issued by models that future cash flows. Moreover, their persistence would be worrying for the economic outlook because of their underlying factors and the potential impact on interest-rate-sensitive sectors such as housing. What are these drivers? Recent movements in the US yield curve do not reflect any actual or forward-looking change in the monetary policy course. The minutes of the December meeting of the Open Market Committee, published last week, confirmed that the central bank has no intention of rejuvenating its stimulus in the foreseeable future, and if so, the process will be extremely gradual. Some of the other potential contributors to higher returns, such as an increased government default risk or more favorable growth prospects, are also unlikely to be in play. If anything, the Fed's willingness to expand its balance sheet without limits reinforces the notion that there is a steady and reliable non-commercial buyer of government bonds. Meanwhile, growth prospects have deteriorated in the shadow of the recent rise in infections, hospitalizations and deaths related to Covid-19. The Monthly U.S. Labor Market Report on Friday reported a loss of 140,000 jobs in December.The Democratic sweep of last week's two Georgia Senate runoff elections raised the prospect of higher government budget deficits and much more debt financing. But, since the Fed has not only committed to maintaining its large-scale asset purchases, but is also open to increasing them and shifting more purchases to longer dated securities, such a prospect should not have an immediate significant impact on yields. The most likely drivers are therefore expectations of higher inflation and more hesitation on the part of Treasury buyers. The former is supported by steps in inflation breaks and other inflation-sensitive market segments. The latter is consistent with the considerable chatter to the market about the fact that government bonds, which are so heavily suppressed by the Fed and face an asymmetric outlook on interest rate moves, are no longer ideal for mitigating risks. Tightening recent interest rate curves in the coming weeks would be worrying for both policymakers and market risk-taker. While the Fed is hoping for higher inflation, it does not want this to happen through stagflation – even more disappointing growth and higher inflation. The Fed has few, if any, tools to guide the economy out of such an operating environment. This, like the blow to corporate profits due to a lack of economic growth, would exacerbate the already extremely large discrepancy between financial valuations and fundamentals. The prevailing view of the market at the moment, and it is virtually universal, is that equities and other risk assets are due to the plentiful liquidity injections central banks and the allocation of more private funds. After all, central banks show no inclination to moderate their enormous stimulus. And investors remain heavily redependent on a strong mix that has served them very well so far: TINA (there is no alternative to equities) is heating btD (buy the dip) behavior in response to the smallest market sell-offs, especially in view of the FOMO (which (the the recurrence of impressive market rallies). As valid as these considerations are at this point, they also justify close monitoring of the yield curve for US Treasuries. A significant continuation of recent trends would challenge the Fed, investors, and the economy. This column does not necessarily reflect the opinion of the editors or Bloomberg LP and their owners. The financial expert and radio host says these money mistakes can be expensive. Investor's Business DailyBuying a stock is easy, but buying the right stock without a proven strategy is incredibly hard. So what are the best stocks they buy now or put on a watchlist? According to Fidelity Investments, more than 220,000 workers exceeded the USD 1 million mark in their 401(k)s in the second quarter of 2020. Cathie Wood's largest exchange-traded fund has risen nearly 160% in the past year thanks to bets on hot stocks like Tesla. Similar performances by star managers, however, were worse than average after their runs ended. (Bloomberg) -- Faraday & Future Inc., an electric vehicle startup, is in talks to go public through a merger with Property Solutions Acquisition Corp., a blank cheque company, according to people with knowledge of the matter. The purpose-built acquisition company is seeking to raise more than 400 million U.S. dollars in equity to support the transaction, which the combined company is expected to estimate at about 3 billion U.S. dollars, the people said. As with all deals that have not yet been finalized, it is possible for terms to change or conversations to fall apart. A Faraday spokesman did not respond to multiple requests for comment. A representative for Property Solutions declined to comment. Los Angeles-based Faraday, led by Chief Executive Officer Carsten Breitfeld, was founded by Jia Yueting, an entrepreneur who filed for bankruptcy in the United States in October 2019 after taking on billions of dollars in private debt. His efforts to Building in China, which included interests from streaming to television, saw him borrow against pledged shares, which left him looking for a total of 2.3 billion dollars in claims, according to the filing. Jia Jia After establishing a creditor trust and transferring all of its shares in the electric vehicle company to bankruptcy, he said in a July statement published on the electric vehicle company's website. He said that up to 10% of the trust will go to the compensation of the shareholders of Leshi Internet & Technology Corp., a unit of his conglomerate that has since gone public, and that he no longer holds equity in Faraday, but remains an employee. Approval of the plan cleared the way for the company to work towards its equity financing targets, the company said. Faraday this month appointed Zvi Glasman, the former chief financial officer of Fox Factory Holdings, as CFO. It has stated that its flagship, known as FF 91, will be up for sale about a year after completing a successful financing round. The ranks of automakers looking to compete with Tesla Inc. in electric vehicles are heavily populated by Chinese start-ups. Investors were led by a madness for everything to do with electric vehicles in 2020, the valuation of Chinese auto company Nio Inc. above that of General Motors Co. and Ford Motor Co. Xpeng Inc. raised 2.2 billion U.S. dollars from a follow-up sale of the shares in December, just a few months after its IPO worth 1.7 billion U.S. dollars, and even the internet giant Baidu Inc. had stepped in. When he planned to join forces with automaker Geely Automobile Holdings Inc. to produce electric vehicles for the Chinese. Market. Read more: Tesla's dominant position in China could be under threat next yearProperty Solutions, led by chairman and co-CEO Jordan Vogel, raised 230 million U.S. dollars in an IPO in July 2020. The company, which is able to track a combination in every industry, initially said it intended to target companies that serve the real estate industry, including real estate technology. Electric vehicle companies such as Nikola Corp. and Fisker Inc. have gone public in recent years through the merger with Blankcheck companies. (Updates with context about Jia and electric vehicles in the fifth and seventh paragraphs respectively.) That's what they're talking aboutApple Inc (NASDAQ: AAPL) and Hyundai Motor Company (OTC: HYMTF) could forge a partnership to make electric vehicles in the United States from around 2024, according to unconfirmed reports. What happened: The deal between the two companies could be signed as early as March, Reuters reported on Sunday -- citing South Korea's IT News.The local newspaper updated its original report and removed details regarding production site and capacity, as well as the schedule for signing the deal and introducing the first vehicles, according to Reuters.Previously, the Korean publication had claimed that the two companies would build the vehicles at the Kia Motors factory in Georgia. which could roll out 100,000 vehicles by 2024. The annual capacity of the future plant is expected to be 400,000 vehicles. The report also referred to the publication of a beta version of the EV by 2022. Hyundai Motors shares were trading 14.43% higher in Seoul at the time of the press. Why it matters: Hyundai declined to comment on the matter, citing an earlier statement to Reuters that it was talking to several automakers. Wedbush analyst Daniel Ives said Friday that Apple will announce a strategic EV partnership in 2021. The analyst said the Tim Cook-led company could consider a handful of strategic partnerships with existing automakers around the world. Morgan Stanley analyst Adam Jonas said last month that shares in segment leader Tesla Inc (NASDAQ: TSLA) face a formidable bear case because of Apple's EV plans. Price action: Apple shares closed nearly 0.9% higher at US132.05 on Friday and fell 0.23% in the after-hours session. On the same day, Hyundai Motors OTC shares closed 28.48 percent higher. More from Benzinga * Click here for options deals of Benzinga * Why 'SPAC King' Palihapaitiya warns against selling Tesla Stock * Apple negotiates tie-up on self-driving EVs with Hyundai: Report(C) 2021 2021 Benzinga does not offer investment advice. All rights reserved. Gasoline-related readers and investors may know Chamath Palihapitiya best as sPAC king and for his role in the SPAC boom in 2020. Here's more on Palihapitiya and some lesser-known facts readers may not know. About Palihapitiya: Born in Sri Lanka, Palihapitiya emigrated to Canada at the age of six. After stints at AOL, Facebook Inc (NASDAQ: FB) and Slack Technologies (NYSE: WORK), Palihapitiya founded The Social + Capital Partnership, a fund that invests in ventures that would not fund large companies. Palihapitiya launched Social Capital Hedosophia with Ian Osborne to take advantage of the alternative route to traditional IPOs to bring innovative tech companies to the public market. Palihapiya plans to put companies with SPACs alphabetically named from IPOA to IPOZ on the stock exchange. Six of the first SPACs were launched, three were closed and one was merged. My ambition is to be berkshire Hathaway of our generation. It will be a Berkshire, a holding company that, instead of holding Gillette and Coca-Cola and McDonald's, will hold technology companies, Palihapitiya told Fortune.Palihapitiya is chairman of Virgin Galactic Holdings (NYSE: SPCE) and brought Opendoor Technologies (NASDAQ: OPEN) with IPOB and Clover Health (NASDAQ: CLOV) to the public. Social Capital Hedosophia Holdings Corp V (NYSE: IPOE) announced a merger with SoFi last week. Palihapitiya has also invested in SPAC deals with MP Materials (NYSE: MP), Desktop Metal (NYSE: DM) and INSU Acquisition Corp II (NASDAQ: INAQ) in Metromile's sights. During his time at Facebook, Palihapitiya held roles that helped mobile and international growth, and had the role of vice president of user growth before leaving. During his time at Facebook, Palihapitiya helped the company increase its user population from 50 million to 700 million. Palihapitiya has criticized Facebook in recent years and sold all of its shares in 2014. At an event at the Benzinga Boot Camp, Palihapitiya said Facebook should have gone public sooner because it could have supported an earlier transition to cellphones. Before joining Facebook, Palihapitiya worked at AOL and was responsible for ICQ and AOL Instant Messenger. Palihapitiya was the youngest vice president in the history of AOL at the age of 26.Big Fan of Poker: The SPAC King is a big fan of poker and has even participated in several World Series of Poker events. Palihapitiya took part in the main event No-Limit Hold'em WSOP in 2011, where he finished 101st and won 54,851 US dollars. In three World of Poker Events, Palihapitiya has earned , 138.701.The investor is also known to host poker games in his house with friends and well-known silicone Investors such as David Sacks and Jason Calacanis.Phil Hellmuth, the all-time leading WSOP wristband holder at 15, has also taken part in poker games with Palihapitiya. Hellmuth has earned more than 15 million US dollars in World Series of Poker competitions. Palihapitiya hosts the All-In podcast, named after his love of poker, with sacks, Calacanis and David Friedberg.Believer in Amazon, Tesla and Bitcoin: Three of the most popular and powerful assets of the last few years have received the seal of approval from Palihapitiya and have more space to grow. Palihapitiya invested in Tesla Inc (NASDAQ: TSLA) in 2016. Over the years, Palihapitiya has discussed that cars are just the first wave of growth for the company. Tesla could become the largest company in the world, according to Palihapitiya.In in 2012 Palihapitiya began investing in bitcoin and bought more than a million dollars from a friend's recommendation. The investor no longer holds bitcoin, but invests in companies that own bitcoin as easier stock management instead of coins or wallets, according to Palihapitiya.Bitcoin could go to 200,000 in the next five or ten years, Palihapitiya said in a recent CNBC interview. Amazon Inc (NASDAQ: AMZN) could be worth 3 trillion dollars by 2025, Palihapitiya said in 2016. You get behind these people who have (an) incredibly intelligent character, who know what they're doing, who won't bend to short-term profits and will only ride the train for 10 to 20 years and make the world a better place, Palihapitiya said of Tesla's Elon Musk and Amazon's Jeff Bezos. to one day become rich. Palihapitiya now uses his wealth as a bridge to help others. The investor is known to tip 100% into restaurants to pay it forward and see the joy of others from this simple gesture. NBA owner: In 2011, Palihapitiya became a minority investor with the Golden State Warriors in the NBA. He is currently a board member for the team that won the NBA championship in 2015, 2017 and 2018. The Warriors are Forbes' third most valuable NBA franchise. The value of the team has risen from USD 363 million in 2011 to USD 4.3 billion in 2020.
