Wii motion plus controller not working

Applicable to: Wii U Deluxe, Wii U Basic Information in this article can help you when the Remote Wii will not be synchronized. Make sure the Sensor Bar is installed into the Wii U console and connected properly. If it is installed, unplug it and reinvent it in several times, check after each attempt to see if the cursor appears. You should feel it clicks into place when it is fully inserted. Make sure the Sensor Bar Position system settings match the location of the Sensor Bar at the top or bottom of the television. Check for unlicensed accessories. Licensed Remote Wii has a model number printed at the bottom near where the plug-in expansion controller (for example - Nunchuk, Wii MotionPlus.) Licensed Wii Remote - Licensed RVL 003 Wii Remote Plus - RVL 036 If you use unlicensed accessories, replacing them with licensed accessories can resolve this issue. Make sure you use a fresh alkali battery set. Unlicensibile rechargeable battery packs, lithium ions, and nickel cadmium (nicad) are not recommended and should be avoided. Make sure the Remote Wii is used between 3 and 10 feet live in front of the TV. If the Sensor Bar is used on a cable box, satellite box, or other top box, remove it and place it directly at the top or bottom of the TV. Check physical damage. Check the Sensor Bar cord for wires or fried kinks. If there is any physical damage to the sensor bar, a replacement will be required. Visit store.nintendo.com buy a non-guarantee replacement. Check for distractions from other light sources. Like: Sunlight, behind or near the TV, shines towards the farce or reflects the TV screen. The surface reflects near the TV that may reflect other sources of light. Infoared light in play areas such as electric heaters, propanes or kerosene, fire from fireplaces or candles, and kitchens or other heat sources. Check the Wii remote pointer lens for obstacles and pollution (stickers, heavy smudges, Wii Remote Jacket askew, etc.) If possible, use a digital camera or mobile phone with an LCD display to check the functionality of the sensor bar. Take the button far down, and raise the remote side button against the palm of your hand. This doesn't take much force. Remote Wii Reset. Remove the battery from the Remote Wii. Wait 1 minute Replace the battery, resynchronize the remote control, and see if the problem is solved. Try another Remote Wii, if possible. If another Remote Wii works, there may be problems with the original Remote Wii only. You may want to buy a replacement. If the other Remote Wii doesn't work, or you can't try another Remote Wii, please contact us for support. Applicable to: Wii, wii mini Information in this article can help you when: Remote Wii doesn't work properly coordinate. Cursor outside center, jerky, not erect, lost, no react properly, upside down, etc. Cursors or character movements do not respond correctly. Confirm the connection and placement of the Sensor Bar. Check the Bar Sensor cord and find any physical damage (sometimes caused by pets or vacuum cleaners). If there is any physical breakdown, you can purchase a replacement from our online store. Verify that there is no source of bright light, including sunlight, near the TV, shining wards away or reflecting the TV screen. Also avoid infrom light sources in play areas such as electric heaters, propanes or kerosene, fire from fireplaces or candles, and kitchens or other heat sources. Use a digital camera or mobile phone with an LCD display to check the functionality of the sensor bar. Install a fresh battery set. Clear all sync from the Wii console. Reset the Wii remote control, then synchronize the Remote Wii with the Wii console. Try using another Remote Wii, if possible. If another Remote Wii works, there may be problems with the original Remote Wii only. Learn more about replacement options. Be sure to use a licensed Remote Wii. Licensed Remote Wii has a model number printed at the bottom near where the plug-in expansion controller (for example - Nunchuk, Wii MotionPlus.) Licensed Remote Wii - Licensed RVL 003 Wii Remote Plus - RVL 036 If you use unlicensed accessories, licensed accessories can resolve this issue. Make sure the Remote Wii is used between 3 and 10 feet live in front of the TV. If you're using the Remote Plus Wii, try reminding it. Check the pointer lens for pollution (smudges, adhesive waste, etc.). If pollution is found, follow these steps: Put one-handed fingers together and wrap the long strips of adhesive tape around the tips, so that the sticky part faces outside. Other tapes can be used, but we have found adhesive tapes to be the most effective. Dab in the sticky area of the Remote Wii with tape to remove any pollution. Verifly sensitivity settings documents. If the cursor does not appear at this time, then this can only be done through the Classic Guard/Classic Controller Pro. If only one or no dot appears on the sensitivity screen, there may be problems with the Remote Wii Console, the Sensor Bar, or the Wii and all items should come for repair. If the Sensor Bar is determined to work using a camera or mobile phone, it's likely a problem with the Remote Wii and it needs to be replaced. Learn more about replacement options. If three or more dots appear, there is an additional source of light or heat taken by the Remote Wii. Please review your play environment for light sources. If both documents appear to be and behaviors that do not educate there may be a problem with the Wii Remote console, Sensor Bar, or Wii. Please contact us for support. If another Remote Wii is functioning correctly, it appears the issue is with the first Remote Wii and it needs to be replaced. Learn more about replacement options. If you can't try another Remote Wii, or the Remotes Wii won't work properly, please contact us for support. By tonybologna, Jul 17, 2011 13,286 23 0 Replies: 240 Views: 66,361 No matter what you do, you can't get your remote to be turned on. We all have days where we see small things. Check again to make sure you've charged the battery fee in the Wii Remote Control. Otherwise, it can be as simple as replacing two AA batteries or recharging rechargeable batteries. Learn how to remove the Remote Wii battery here. If that doesn't solve the problem, make sure the battery is properly oriented and make good contact with spring loaded battery contacts. Check the corrosion on the contact and try to brush it off. You have a fresh battery that makes good connections on the Remote Wii, but away still not turned on. The connection between the power button and the motherboard may be dirty and cause the remote control not to be switched on. To clean the power button contact, open the cover plate and brush a light touch with a new, dry toothbrush. It is also possible that the power button is slightly misrepresented in the Remote Wii or the power button extension has been fried. In any case, you need to install a new power button. You press the button and it won't come back. Have you ever found yourself craving a snack while playing on your Wii and you forget to wash your hands? Sugary foods and liquids can easily get a button underneath and cause them to stick or stop working. Your button may just require a good cleaning. To clean the buttons, you need a NEW toothbrush, some warm water and a little soap. Remove the battery from your remote control before cleaning your button. Slightly weaken the toothbrush with warm soapy water and brush around the sticky button. Dry with paper towels. If the problem persists, you may need to install a new button. Follow this guide to replace the main button at the front of your remote control. Use the Trigger B guide, to learn how to install a new B trigger button. As you show away you on screen, the cursor is just not where you target. Make sure the Sensor Bar is not obstructed by anything. If it is, move to a place where it has a direct line of vision with your remote control. Make sure the Sensor Bar is fully installed behind the Wii Console. Oftentimes, the Remote Wii will not be properly calibrated causing the wrong cursor. To re-calibrate the remote control, place it on the table button down for 10 seconds. make sure Remote is oriented in parallel with your TV screen. After 10 seconds, show the Remote Wii back on TV. If this doesn't work, go to the Wii settings on the home screen and make sure the location of your sensor bar is correct, correct, below or on your TV. The Wii sensor bar uses heat signals from the Remote Wii to make sense of where exactly you are pointing. Make sure that no lights are placed too close to the sensor bar because the heat signal mixture will cause a sporadic cursor. Also, make sure there are no infrared lights in the same room as your Wii for this will also affect the sensor bar. If the problem persists, it may be a broken sensor screen on your Remote Wii. To install a new screen see our Installation Guide. Motherboard is the heart of the Remote Wii. The motherboard sends a signal across the Remote Wii, which includes a signal to turn on the remote control when you press the power button. If going through all the other steps, your problem can be a broken or burning motherboard. Use our guide to installing new motherboards. If you know there's a sound that's supposed to go out and nothing. Speakers make two connections to the motherboard and there is a possibility that dirt or dust can interfere with the signal to the speaker. To reach the loudspeaker, you must first take the closing plate. Once inside the device, find two cifer contacts of the gold and lightweight brush them with a new, dry toothbrush. You smashed the service on the Tennis Wii and your remote control did not swear. This indicates that there is a problem with your Wii Remote internal speakers. This is usually caused by dirt and dust getting into the remote control. To replace the speakers, see our good guide to installing new speakers. You've just gotten hit by a red shell on mario Kart Wii and away you're not ruined. The rumble in your Remote Wii is made by a 'rumble box' which is a motor with weights on it. This is sometimes damaged, causing away you are not rumble. However, replacing and installing a new rumble box will require a lot of falsification skills and specialized tools. Instead, installing a new motherboard will fix your rumble box and other problems that aren't occupied with your Remote Wii. Remote.
