## Variety in art images

This classic celebrates its 150th anniversary of publication in 2018, with an adaptation of the new film coming out this month, we look at how many versions of Little Women are tailored to the time. It's called Art Transfer and unlike the traditional photo filters we're familiar with, the app uses an artificial intelligence wizard to turn your photos into modern masterpieces according to Google, transferring art using algorithmic patterns created by AI to edit photos instead of overlaying them on top of them. There are more than 20 different styles to choose from from the likes of Vincent Van Gogh, Claude Monet, Edvard Munch, Leonardo da Vinci and many other famous artists. The results look pretty good, but don't expect to continue building The Mona Lisa.Read: 10 of the 10 best art apps for Android, so your Picasso onThough uses the technology behind it that sounds complicated. Simply open the Art and Culture app and tap the camera icon at the bottom, then select Art Transfer and Take a new photo or select an existing photo on your device, then you can choose more than 20 styles to apply to your photos and save your new artwork to your device, or share it with friends and family online as still images or GIFs. If you want the new Art Transfer feature of the Art and Culture app to go, you can download it at the link below. Download Google Arts & Culture tagged: GoogleGoogle Apps Latte art is proud of the professional baristas and the delights of Instagram users everywhere. Print the images into the lattes printed out in selected locations around the city. Anyone can choose and print the picture on a perfect foam latte or cappuccino. You can also turn your own photos into latte art and then take a photo of your latte. You can't buy it for home use (at least it's not cheap), but Ripple Maker has already been installed in a number of NYC locations and will be launched nationwide and to other countries. Throughout 2016, due to the full Wi-Fi activation, Ripple Maker will be selected to the interface and printed in coffee level, which is similar to the gray scale, but with caffeine, the proprietary Ripple pod is filled with concentrated coffee extract, so the machine will interpret any image or text as a version that can be printed using ink extracts. But only consumers with mobile apps will get a complete experience. The mobile app has a library of printable ripples, mostly morning text images and coffee jokes. There is also a random function in case you are obsessed with your latte art options. Choosing images from your mobile phone's camera roll will allow you to edit, resize, filter and add text to your custom latte artwork before you send it to the machine. Cafes and restaurants that use machines will have to pay at least \$1,000 for the Ripple Maker machine, in addition to the monthly plan fee starting at \$85. Of course, that could mean that your latte costs twice as much. But the mobile app is also geographically enabled, so you can search the nearest Ripple Maker coffee shop and find it. There are currently 4 coffee shops just a few miles from our Digital Trends office in Manhattan. Colossal's typical fare editor's advice includes a San Francisco sculpture (which is made of 100,000 toothpicks and rolls on Facebook shares nearly as much), frozen frames of dogs jowly shaking water (48,000 shares) or photos of translucent ants slurping up colorful juices (17,000 shares). Barnes, a millionaire chemist at suburban Pennsylvania, houses a full collection of one of the most extensive private art collections in the world: Renoir, Picasso, Matisse, Glackens, Prendergast Jobson. May not be a filthy wealthy scientist who has a house of Cezannes, but he shares Barnes's obsession with tracking eye candy and collecting it all in one place. You can see how this guy is making great bloggers, Jobson launched thisssicolossal.com in 2010 and put six to eight posts a day to keep track of the interesting artists he came across. It was only my mother and my wife checked in for a long time, But the former design student had been jonesing for a more creative shop. Today, the site is approaching a post where 3,000 art speaks for itself, he says: The quality of art makes it go viral. It has nothing to do with me, but Jobson is modest. His ability to cherry-pick allows the art of his choice to achieve widespread visibility. On a typical day, he looked at 2,000 to 4,000 projects on more than 300 art blogs, including sending artists a hundred times a week (some of the sites he went to were BOOOOOOOM, Beautiful/Decay, StreetArtNews, Juxtapoz and My Modern Metropolis). His ongoing track record with jaw-dropping, most inventive images shared on the web has made Colossal, which was nominated for Webby. For years, it must be browsed for anyone even remotely interested in the visual arts, so how does Jobson's total artwork achieve viral walls? In order to be introduced in Colossal, the project must fill three Pinterest-friendly criteria: they need nothing Jobson has ever seen before, should be interesting for anyone, even an audience that doesn't know anything about art and resonates strongly with Jobson himself, and what resonates with Jobson often resonates with others, his ritual post coupled with visible tastes, creating a large audience and his proud social presence (now Colossal has about 350,000 likes on Facebook). A few months later, he introduced the online store Colossal, which sells things like dragonflies made from magnetic clock parts, fridges that double the size of pots for small trees and blackboards shaped like human skulls. He has a list of more than 20 designers, half of the local people in Chicago where Jobson is located, supplying inventory. He is an unlikely art collector (although the collection is only digital). He originally went to school to design, but after flunking Drawing II, he realized his appreciation for art beyond his own ability to whip surface sketches, Jobson thinks that's partly why Colossal is perfect for Facebook, thousands of people who may not need to be experts in the high period of trompe l'oeil or Baroque, despite a lack of technical knowledge, but users still share Ai Weiwei installations with their friends. The content is accessible, and they don't feel talked to, Jobson says: it's an outside art blog, it's Hoypolloi, not Jobson., not a rich eccentric and a masterpiece, and not all of his readers hold. He's just an ordinary guy who's really excited about art and is adept at predicting what online audiences will be forced to share. Colossal is the Tate Modern of Charles Satashi's internet of all. I learned, along with others, Jobson, I don't have a really strong art background, but I have a knack for keeping this peculiar, which is my own art. This Christmas tree collage collage is ready for the holidays, decorated with star bulbs and handmade ornaments. What's needed is a gift under it! Before downloading, you will be able to view file type sizes, views and downloads with over 70 free Christmas tree collages. Clipart Panda is the perfect place to visit a snowy Christmas tree, bare decorations and even a visit by Santa. Decorate the Christmas tree from the OpenClipart Panda Art Clip, dozens of pages of results are shown at When you search for Valentine's Art clips, you will find large, high quality hearts, cards, borders, jewelry, gifts, and more. Fairy star collage graphics are free here, divided into several parts, such as Christmas star outline, star image, star border and star frame. They do well, large images and are available in just a few different colors, such as black, blue, red and yellow. Free star collages, borders and frames from fairy graphics explore the connection between environment and art through books, music, movies, visual arts and more. More
