January 23, 2018 Version 3.0.0 64 bit compatible version This app is incredible, works great, but it's time to update. It needs to be updated for the iPhone 5 and definitely needs multitasking. Although this app hasn't been updated for ages, so I'm not getting my hopes up. I was going to give it zero stars, but that's not possible. There is no sound when using this application. No sound means it's a \$4 ripoff, I feel like an idiot for buying this app. I plan on emailing developers about it. There is an external chance that this is just a coincidence and I am making a mistake, but I do not think that is the case. People shouldn't sell things that don't work, I hope it warns potential customers, and I hope this problem is solved I was excited at the prospect of having a sequencer like this on my phone, but it was released. Cool app featuring digital synthesizer and piano-roll style sequencer. He works for me on the 6th gen iPod Touch. The controls are easy enough to work out if you are familiar with DAWs. The application is aimed at those who want to build a track from the level of sine wave. Open the Mac App Store and buy and download apps. Create your own authentic 8-bit songs and sound effects by adding a timeline of notes or loop arrangements. Share your amazing tunes with friends by exporting to the AAC audio file, 6502 ASM6 mounting code, NES Sound Format file, or NES ROM file/4 channels are available:- Square Wave 1- Square Wave 2- Triangle Wave- NoiseEach channel can play one note (or noise event) at a time. Square wave channels have 4 operating cycle parameters. and the noise channel has 32 adjustable noise preferences. These parameters, as well as the volume, are adjustable at the channel level or individual notes. Several sample songs are included if you're just getting started and want to know more. Features: - Loop-based or linear song arrangement-Export to AAC audio file- Export to 6502 ASM6 code-Export to NES sound format (.nst) file- Export to NES ROM (.nes) file-Multiple windows on iPad - Dark mode and light-drag and drop support for notes and loops-Adjustable pace-Adjustable zoom-Cut, Copy and paste - Bulk note editing (transposition and volume) - UI updates - Menu improvements for iOS 14 devices - New example of a song cavern - Bug fixes and performance improvements This would honestly be best music app. if we were import your own sounds/instruments and/or if you provided it from scratch. It is this great app though. I use it all the time. I'm so glad you like the app! It would take some time to implement, but I plan to add support for the NES DMC channel in the editor. This would allow samples and custom sounds while still remaining within nes hardware limitations, so ASM6 code and NES ROM exports would still work. There are still some other features that will have to get done first, but I'll keep that in mind and try to make it happen as soon as possible. Amazing app, Amazing user control. Overall amazing. One thing I propose is a learning regime. I bought it then it was crazy because I couldn't figure it out, but once I did it, it was amazing. 10/10, recommended. Somethings to keep in mind:- Custom sounds would be nice!- Teaching mode - More sounds on the skin s.- Maybe percussion .? Once again, keep up the good work! I like it, you can do amazing chiptunes on this app, but what it needs is to fix the triangle section, the triangle doesn't sound good, so I ask if you could make the triangle sound accurate @ Thank you for your review! I was wondering if you could send an email to octoberchiptuneios@gmail.com with more information about what you hear with the triangle channel. App Support Privacy Policy
