Airsoft double barrel shotgun sawed off

Description Mad Max double barrel metal Hudson gas shotgun is really a spectacle you need to see and experience in person. The simplistic design is clean but aggressive. Hudson's level of attention to the production of this gas shotgun is reflected in its flawless metallic finish and its still flawless operation. The wood is real and very smooth. It shoots hard and is a great piece to have, whether as an action airsoft gun or as an authentic and realistic collector's piece. Specifications: Operation: Gas ShotgunFiring Modes: 7 round burstMuzzle Speed: 300 FPSMagazine: 7-round shell, comes with two shellsBody: Metal and Real Wood FurnitureIt hit: £5Ammo type: 0.20gram seamless BBsPackage includes: Gas shotgun, instruction manual, magazine, pack of BBs Comments and ReviewsVideoThe Mad Max double barrel metal gas shotgun Hudson is really a spectacle you need to see and experience in person. The simplistic design is clean but aggressive. Hudson's level of attention to the production of this gas shotgun is reflected in its flawless metallic finish and its still flawless operation. The wood is real and very smooth. It shoots hard and is a great piece to have, whether as an action airsoft gun or as an authentic and realistic collector's piece. Specifications: Operation: Gas ShotgunFiring Modes: 7 round burstMuzzle Speed: 300 FPSMagazine: 7-round shell, comes with two shellsBody: Metal and real wood furnitureIt hit: £5Ammo type: 0.20gram seamless BBsPackage includes: Gas shotgun, instruction manual, magazine, pack of BBs Airsoft spring-loaded shotguns are replicas of the original shotguns, many of which you have often seen in action movies. Thanks to the need to pull the springs manually before each shot is fired, we have the impression of great realism. In our offer you will find models made of plastic, metal and combinations of wood and metal. Airsoft spring-loaded shotgun Airsoft spring-loaded replica airsoft shotgun, as well as other types of airsoft replicas, shoot the ball using compressed air. The internal mechanism is based on three elements: cylinder, piston and spring. Due to their design, spring replicas require manual stretching of spring to users before each shot is fired. These are replicas that offer the user a high level of realism. The need for stretching in the spring before each shot gives us the opportunity to perform a spectacular reload of the airsoft replica. An important advantage of this kind of airsoft replicas is their fast shooting speed and fire field. This, of course, depends on the specific model. Also interesting is the use of more barrels. Some of airsoft spring-loaded shotguns have three barrels, allowing you to shoot 3 Simultaneously. Airsoft double barrel shotgun using metal makes the replica heavier and the wood more visually attractive. Another effective solution is to load the balls into the dummy shell. Thanks to this, after burning all the balls, the worn shell automatically falls out of the chamber after releasing the lock. In order to increase the speed of the shot, we can, depending on the model, attach a stronger strand. In addition, some airsoft spring shotguns available in our offer have more than one fire mode. In the basic pump action mode, we take a shot after reloading and, for example, in Slamfire mode while holding the trigger, the shot is automatically taken after each reloading cycle. Airsoft shotgun replicas use different types of magazines. They can be shells that contain about 30 balls or a box of magazines with a capacity of 14 balls for example. One of the most important features of this type of airsoft replica is the realism of use. The need to reload, weight and fire effect can bring a lot of fun to the user. Replicas of this kind are suitable for CQB games, in which the fight takes place in a small space and often accuracy is not so important. Unfortunately, the second element may prove to be the weakness of many models of airsoft spring-loaded shotgun replicas. With three barrels we get a very wide field of fire, but it happens at the expense of accuracy. That's why when considering airsoft spring-loaded shotguns is worth taking into account. Airsoft gas shotgun Gas-powered airsoft shotguns are replicas of the original shotgun. many of which you have seen in action films. Due to the recoil of the need to reload after each shot and use bullet shells we get the impression of great realism. In our offer you will find models made of plastic, metal and a combination of wood and metal. Airsoft replica gas shotguns like other airsoft gas replicas are powered by green gas or CO2. An important difference in the case of a shotgun is that the gas is used to load the shell. It's a slightly more challenging activity, so it's worth buying more ready-made ammunition before shooting. It is also worth paying attention to their colors, which indicate what kind of power supply should be used. The next step is to load the shells. This can be done with a fast charger. The number of bullets and bullets we can load depends on the type of shotgun. Co2 and green gas powered shotgun Airsoft gas shotguns are powered by two commercially available types of gas – green gas and CO2. In both cases, the shotguns must be loaded with individual shells. After firing the shotgun, it is necessary to reload the shotgun. Therefore, it is worth buying an adequate supply of ammunition. A great advantage of this way of working these replicas is the high level of realism. Thanks to the need to and the use of ammunition with clams, gas replica shotguns offer the user a sense of incredible realism. The use of metal or wood manufacturers makes the replica more difficult and visually attractive. Another effective solution is to load bullets into the dummy shell. Each time the trigger is pressed, the entire contents of the shell are fired and the used shell is reloaded through the ejection window. The cut-off shotgun cut-off shotgun is a shotgun with a shortened barrel to increase the area of fire. In addition, this type of weapon is shorter and smarter to carry. However, a number of factors should be taken into account when deciding to purchase this type of replica. First, dispersion, which in many cases is an advantage. Unfortunately, shortening the barrel significantly reduces the accuracy of your airsoft replica and as a result causes more problems with the target. Another advantage of gas replica shotguns is their rapid firing. Appropriate preparation of clams and the right amount of training will cover us with a hail of bullets. In addition, it is associated with the possibility of firing more balls. These types of airsoft replicas are ideal for CQB activities, not just as a collectible gadget that will decorate the owner's wall.
