Google drive batman

Source: Android Central Some users are having problems with Google Drive this morning. The outage began around 10 a.m. eastern time. From the reports, it appears to be limited to U.S. Google Drive and its related productivity set was hit by a limited outage in parts of the United States this morning. The outage began around 10 a.m. ET but remains unsolved or reflected in Google's app status page at the time of writing. Just look at the volume of reports on Twitter or Down Detector so far, it's not a big trophy, it's just something to keep in mind should you run into any problems with Drive or Docs in the near future Is Google Drive down for you as well? Let us know in the comments below. Best VPN service of 2020 Source: Android Central Update: G Suite status panel now says problems with Google Drive have been resolved. DownDetector reports for services were also reduced to just 17 by 1 p.m., eastern time. The following original story: DownDetector is showing down issues for G Suite services, with Google Drive, Documents, Worksheets, and Slides all affected. The number of complaints on the service status tracking website skyrocketed from fewer than 15 earlier in the day to more than 21,000 within the past hour or so. Twitter, too, has erupted with memes and complaints regarding outages: Google Drive is down. Google Classroom is turned off. Google Drive is turned off. @help pic.twitter.com/JCt5858cA3- Ciara Bri'd Frisbie (@CiaraFrisbie) January 27, 2020 Google Drive is down, the end of the world is near- Mike Rooney (@mike_roon) January 27, 2020 G Suite status panel is also showing service disruption to all four services and indicates that Google Classroom is also having problems. We're investigating reports of a problem with Google Drive, the search giant's cloud services page said. We will provide more information soon. Affected users can't access Google Drive. However, there is no explanation what can cause power outages or when they can be fixed. We will update this article once we know more or if the situation changes. In the meantime, it might be a good idea to make local copies of any documents you were working on when the outage occurred or simply use the good old 'copy/paste into Notepad' hack. Google Drive will soon allow users to create Google Drive file shortcuts as a cloud storage solution with 15GB of storage available for free and paid plans, along with additional features and storage. Google Drive is a user-friendly option thanks to its simple interface and integration with Google Docs. If you're new to Google Drive, see the learn how to create an account, upload and download documents, share your files, and get the most out of the service. Start accessing Google Drive Screenshot Step 1: If you don't have one yet you need a Google account before continuing to use Drive. You can sign up for free and doing so will give you smooth, synchronized access to all Google services. You'll need to pay a fee if you want more than 15GB of storage, but whether you choose to do so won't affect your ability to use the service. Downloading Google Chrome also doesn't hurt, as the popular web browser has a number of extensions and tools that integrate well with Drive. Step 2: After signing up (or signing in to your current account), you can access Drive through the browser or mobile-specific app currently available for both Android and iOS. Navigate screenshots After signing in to Drive, click the New Button plus sign in the upper-left corner or My Drive, located in the middle of the screen. In the mobile app, press the circle with a plus sign in the lower-right corner. This opens a menu that lets you create or upload files to Drive. You can create spreadsheets, word documents, slideshows, forms, drawings, and a variety of other things through third-party apps. We won't dive into how to use each of these free programs here, but here are a few tips to learn how to use these services quickly: Tip 1: The buttons on drive are pretty simple, but if you're not sure what a program does , just hover over it with the mouse. A pop-up will appear explaining the function of the button. Tip 2: If you've ever used Microsoft Office — i.e. Excel, Word, or PowerPoint — Google's Sheets, Documents, and Slides software will look familiar. They work similarly and are said to be more intuitive. You won't find as many advanced features as in Microsoft software, but Drive is free, so that will be expected. Tip 3: While you can go to the Main Documents, Worksheet, or Slide page to see all files of that type in a single place, creating folders can be a better way to organize. To create a folder, click the New button in the upper-left corner, select Folder, and name the file folder. Then simply drag your file(s) to the folder you select from the main Drive page. You can also copy files you'll want to access later by clicking Add Stars in the menu of that item, although keep in mind that the person who added them can only view them and not by people you've shared a specific item with. Tip 4: Another way to quickly find an item in your Drive is to use the Search function in Drive. At the top of each page is a field where you can search for a file with its name or file type. If you press the down arrow in this field or other Search Engine, you can specify more and search files based on specific criteria, such as dates or people shared the file. Learn more about Google Upload and share documents To upload documents to Drive, click the Upload files or Upload files button under New or My Drive and select the file from your computer. Drive is great for personal use, but what makes it different from other cloud services is its powerful collaboration tools. If you need to work remotely with someone on a project, you can share documents with them and make changes together in real time. To share a document after you've created it, look at the upper-right corner of the file window and find the Share button. To share a document after you've created it, click the Share button in the upper-right corner, add your collaborators with their email address, and click the Blue Done button. Once they've been granted access, the document will show up in the Share with me tab in their Drive dashboard, and a link to the shared document will also be sent to their email inbox. screenshot You can use the shareable link at the bottom of the Share With People and Groups menu to send files via text or other messaging services. Just click Copy link at the bottom of that menu. While inside a shared document, you can see who else is currently editing it by looking at the top right corner of the window. Collaborator names will be displayed in different colors (or with their account photos), so you can quickly distinguish them. Just hover over any color to see who it represents. Download documents and access files offline Another useful feature of Drive is the ability to view and edit files even when you don't have internet access. All you need to do is download the Google Docs Offline extension for Google Chrome. Once downloaded — and enabled in Drive settings — you can access specific files (Documents, Worksheets, and Slides) even when you're traveling or don't have internet for a few hours. A gray circle with a lightning bolt over it will appear next to your file name in the file window, let you know when you're offline. However, one of the downsides of this is that you can only access files you've created and haven't shared with anyone yet. You must also open Google Drive in your browser to do so. Data can also be accessed offline through the mobile app, assuming you've enabled this functionality in Presets. Add multiple collaborators through the Google Team If you want to share documents with a large group of people, you can avoid entering individual email addresses by sharing documents with the entire Google Team. Each person in that group (as well as those added to the group later) will then have access to any content you've shared. Share multiple files at once Need to share a series of files at once? Instead of sharing each individually, you can move them to a folder and share it. Everyone you share folders with will have access to all of its internal data. Convert documents created using other programs Need to share documents with colleagues or friends so they can collaborate on it, but already have files in another similar program? No need to fret. As long as the documents are in the correct format, most files can easily be converted to Google Docs, which can then be shared and edited in collaboration. To do this, simply upload the desired file and open it in Drive. Next, in the document preview screen that appears, select the Open Equals drop-down menu button. Select a program from that menu to convert it to Google Docs format. Here are the file formats that can now be converted to Google Drive. OCR document spreadsheet presentation .doc .xls .ppt .wmf .jpg .docx .xlsx .pps .gif .html .ods .pptx .png plain text (.txt) .csv .pdf .rtf .tsv .txt.tab Recurs about the old version of the document screenshot An important problem with collaboration is that in general it is often a pain to fix something that others screwed up. Especially with live material that many people have access to, tracking changes becomes a headache. Thankfully, you don't have to worry if you find yourself in one of these situations - Google has your back. Drive saves any updated versions of your document for 30 days or 100 versions, which comes first. Built-in save makes it easy to re-back to an older version of your file (even multiple times). To retrieve an earlier revision of the document, open the file that you want to change. Click File, and then click Version History. Then, select View Version History. A new screen opens, and a bar will appear on the right side of the document. This bar lists earlier versions in order of time. Click on any one of them to get a preview of that particular revision. If it's the button you're after, click the Blue Version Restore button that appears at the top of the screen. Click it to re-edit the document back to that version. Version history also gives you the ability to see who made the changes. Be sure to pay attention to people with editing rights versus read-only permissions when sharing documents to avoid unauthorized changes. Editor's recommendations
