The courses cover technical and practical training in the following areas: Pharmacy Law Pharmacology Pharmacy Ethics Anatomy Health Systems Medical Terminology Medical Terminology School Name More information Request information Step 2 Full training at work Most programs allow students to gain clinical experience during their training. Depending on state laws, students can also choose to get on-the-job training without enrolling in an education program Clinical experience can take the form of a structured training program in a retail pharmacy that has been associated with the school. Another option is to complete practical training in an approved pharmacy or medical center. Step 3 Certify Some states require pharmacy technicians to become Even in states where certification is not required, most employers will only hire pharmacy technology that are certified by the Pharmacy Technicians Certification Board (PTCB) or the National Association of Health Care Workers (NHA). PTCB requires applicants to pass an exam, while the NHA requires students to complete a training program or have at least one year of experience working as a technician. Both organizations require applicants to have a baccalaureate diploma. Step 4 Specialize Some pharmacy technicians choose to work exclusively for a retail pharmacy chain and will complete specialized training to serve as a general pharmacy technician, community pharmacy technician or central pharmacy operations technician, or in a similar role. Step 5 Maintain pharmacy technology certification must pass a recertification exam every two years. They must complete at least 20 hours of continuing education before sitting the recertification exam. Technician of Pharmacy Employment: The technicians of Basic Pharmacy work under the direction of a pharmacist with licence to dispense medicines and provide information to the clients. Pharmacy technicians usually work behind a pharmacy counter in a pharmacy, grocery store, hospital, nursing home or other medical facilities. This position consists of working with pharmacists, patients and occasionally with pharmaceutical representatives. Basic working functions include dosing medications and filling prescription orders, caring for administrative tasks, and managing basic customer service functions at the counter. Some pharmacy technicians lead a team of pharmacy staff members as the lead pharmacy technician. Others may be responsible for managing supply and inventory or providing relevant information to other healthcare professionals. Becoming a pharmacy technician can be a gateway to a career as a pharmacist, nursing assistant or other medical professional. Demand for pharmacy technicians is expected to remain high over the next decade, which makes this career path potentially rewarding for those who want to work in a pharmacy environment. The average annual salary for pharmacy technicians in 2014 was \$29,810, though this varies by state. Pharmacy technicians in Washington, Alaska, California, Hawaii and Oregon are the highest earnings, on average. The Bureau of Labor Statistics reports that higher paying positions are available with federal, state and local government agencies, outpatient care centers and scientific research and development organizations. pharmacy that in department stores and health and personal care stores usually make annual salaries lower. In addition, they should have cultivated the following skills: Attention to detail The main responsibility of pharmacy technicians is to dispense prescription drugs, which requires great attention to detail. Pharmacy technicians should be able to measure, mix, dose and dispense adequate amounts of drugs based on the pharmacist's orders. They may also be involved with data entry tasks to update patient records and fill prescription orders. Pharmaceutical literacy Sometimes pharmacy technicians will have to read and interpret pharmaceutical literature and prescription information. They must have knowledge of pharmaceutical and medical terms and, in some cases, translate information for the benefit of the client. Exceptional customer service Although it is not the responsibility of pharmacy technicians to provide medical advice, they will be responsible for interacting with customers when dispensing medicines. They should have basic customer service skills to make sure they are providing customers with the right recipes, contact customers to advise them that the prescription is ready and monitor query that customers may have about their order. Pharmacy technicians in the organization can work on a variety of configurations. Some environments, such as retail pharmacies and grocery pharmacies, may be busier than others on a daily basis. Pharmacy technicians, therefore, should be able to handle different types of Work with great precision under pressure and keep everything organized behind the counter. Although pharmacy technology certification and undergraduate programs require practical training, some general courses can be completed online. Many accredited schools offer online pharmacy technology programs that make it easier for a student to care for a family or work a full-time job to complete their education. Here are some things to look for when exploring online pharmacy technician schools: Accreditation The American Society of Health System Pharmacists (ASHP) and the Credentials Commission (COC) accredit pharmacy technician training programs in the United States. Enrolling in an accredited programme ensures that the programme maintains a high level of quality and meets the requirements of the supporting body. Practical training opportunities Since most certification and undergraduate programs for pharmacy technicians require practical training through similar externality or training, it is important to determine what types of associations the school has secured for external ones. Some schools offer external internships as a courtesy of students, while others require students to seek and apply for training on their own. In any situation, students are usually responsible for organizing their own transportation to the pharmacy, laboratory or other approved facilities to complete this component of the program. Certification preparation certification is not required in some states, but most employers prefer pharmacy companies to be certified. An online pharmacy technology certification program should provide comprehensive training to prepare a student to sit the examination of the Pharmacy Technicians Certification Board (PTCB). Those interested in certification from the National Health Association (NHA) must have at least one year of work experience, which can be acquired through an external program offered by the school. What skills are required? Pharmacy technicians should have strong attention to detail, since most of their daily tasks involve measuring, dosing and dispensing prescription drugs in accordance with very specific orders. They must also have good written and verbal communication skills to communicate effectively with pharmacists they work with, patients, and medical professionals or medical representatives with those who come into contact. Pharmacy technicians should take the lead in education themselves on drug information and major changes occurring in the industry. They may be necessary to read about drug studies, review the or produce reports on different prescription drugs and dispensing activities. Since many work in busy retail pharmacies or emergency rooms, they must also have strong organizational skills and be able to work in a fast-paced environment without making mistakes. Credentials In addition to becoming a certified certificate Technical (CPHT), pharmacy technicians can purchase other certifications that allow them to explore attractive job opportunities. Options include: Sterile Products (IV) Certification of Professional Chemotherapy certification of the certified pharmaceutical industry Certification of Nuclear Pharmacy (NPT) Training Tools and Technologies Pharmacy technicians are typically trained in all medical software programs used by the pharmacy so that they can fill prescription orders accurately, manage patient billing information and coordinate patient communications in a timely manner.
