Before babies can begin to move independently, it can be a challenge to keep them occupied because parents are obliged to do almost anything for them. Once babies learn to jump, it's something they enjoy, but parents usually need to help them jump. Fisher Price Rainforest Jumperoo changes all this by offering parents a mobile jumping station that helps babies bounce, while also offering toys and a spinning movement. Assembling jumperoos and using them are simple processes, but all instructions should be followed to ensure your child's safety. Place one of the leaning bases on a flat surface. Press the button on one of the base pipes and push it into a small tube that is attached to the reclined substrate. Hold the button down, push the base tube until you hear a click. Repeat this process with the second base and base pipe. Place two washed bases and base pipes on the floor so that they form a semi-circle. When the Jumperoo is fully assembled, it will form a circle. Grasp the narrowed edge of the base tube on one of the seeded bases and insert it into an ordinary tube on another reclinear base piece. Push until you hear a click. Now two reclined basic prefabricated pieces should be attached. Push the open side of the small base pipe to one of the recline pieces of the basic prefabricated pipe. Keep pushing the small base tube until you hear a click. Repeat the procedure with a large base pipe and another part of the basic assembly pipe. Lift a large base piece of pipe and place it on top of a small basic part of the pipe. Place a large base piece on a latch located on a small surface and push down until you hear a click. You should have a full circle now. Pick up a plastic piece of seat and fabric cover. Press the plastic piece of the seat so that the interior is up and the star markings face you. Pull the pad through the seat and wrap the edges of the fabric around the edges of the plastic seat. Fit six grooves on the fabric cover on the corresponding pins on the seat and fasten with a loop of fabric tie around the pegs. Hold the frame part above the base, placing each of the three frame tubes over one of the three base pipes. Push one of the frame tubes into the base tube, stopping when you hear a click. Proceed to the two remaining pipes. Insert part of the seat and pad into the seat ring area. You'll hear a shooting when it's safe. Insert the batteries into the seat base by opening the marked battery compartment with the Phillips head screwdriver. Place three AA batteries in the section after the positive and negative side tags. Place the rainbow toy in the base of the meagre tiger and place the base in the front of the jumperoo tray. Attach the remaining toys to the area of the tray, with the lizard and dragonfly going to one side, and the electronic toy going to the other. Places are and you will push each toy into place. The click noise will tell you it's safe. Push the toy leaves into two slots on the front two tubes of the seat. Put your baby in a Fisher Price Rainforest Jumperoo after it's fully assembled. Your child's fingers should just graze the floor while standing, not bounce, and the whole foot should not touch the floor. If this is not the case, you will need to adjust the height. Remove the baby from the seat to adjust the height. Turn the Jumperoo and find the height belt located under each frame tube on the actual mounting piece of the seat. You will need to pull each strap to the desired height by lifting or lowering the strap to one of three positions. Fasten the strap strap around the strap after you have it in the correct position. Return the baby to jumperoo and mention the power/volume switch on. You can select one of the two volume levels for the music or sounds of the rainforest. Select the mode you want to use and move the mode to the correct position. Single-music mode will play music and sounds whenever a baby jumps. When double mode with a musical note, music and sounds will be played multiple times five minutes after the baby starts bouncing. It will continue to play, even if the child stops moving, unless the adult manually turns it off. Make sure you complete the battery installation before adding toys to jumperoo base as the electronic toy will go to the top of the battery compartment. Fisher Price Rainforest Jumperoo should only be used by children who are able to independently keep their heads up. Jumperoo can hold children who weigh less than 11.3 kilograms and are less than 32 inches tall. Kids shouldn't be left unattended in a Fisher Price Rainforest Jumperoo.
