Certification of Certified Information Systems Security Professionals (CISSP) is a globally recognized standard in information security. Under the management of the International Consortium for Information Systems Security Certification, also known as (ISC)2, CISSP certification enables professionals to effectively develop and manage security controls in the business environment. To obtain CISSP certification, you must have at least five years of professional experience in information security and must be approved by another CISSP certified professional. They can be invaluable resources during preparation. How much time should I devote to preparing for CISSP exams? The key point to be noted in the CISSP exam is that there is a weak mapping between the nature of the course material and the candidate's professional experience: risk management professionals find 60-70 hours of time to prepare quite adequate to clear the CISSP IT exam will take less time - 40-50 hours of training should be enough to clear the exam.
