Posted by CapnRex101, 12 Sep 2016 1pmView image on Flickr 75159 Death Star had been the subject of huge speculation until the set was unveiled a few weeks ago and seems to have received almost total condemnation from most LEGO Star Wars fans since then. The set is the 10188 Death Star which was retired late last year and the price has increased greatly, causing a great disappointment from the original set owners and potential buyers of the new one. However, I was eager to evaluate this set based on its own merits as well as in relation to	, ,
the Death Star and will be doing just that after the break Box and Content The huge box is remarkably different from the death star of 10188, displaying the model at a familiar angle, but introducing a vivid range of explosions and laser explosions that look quite impressive. I thin	nk the presence of the
ultimate collector's Series insignia is justified here and I like the shiny Star Wars logo at the top of the box that helps differentiate this set from the rest of the LEGO Star Wars line. Three white boxes and some loose numbered bags are found inside. The instruction manual is pack and is connected to the wire, as well as the instructions for 10188. It contains exactly 300 pages, the first fourteen of which are filled with information about the Death Star, as well as interviews with the designers. The graphic designer comments on Han Solo's new hairpiece, while	
Mølgård Frederiksen, refers directly to his study of the Death Star 10188 and the improvements that have been implemented. The sticker sheet is packed in a box with instructions and is quite large, containing a total of 31 stickers. As always, it would have been wonderful to see	a full selection of printed
pieces given the premium nature of the set, but the stickers are all fairly easy to apply, which is nice. Minifigures is exceptional, with a variety of characters from across the Original Trilogy included. Luke Skywalker wears three different outfits in this se from his appearance in Star Wars Episode IV: A New Hope. Her tousled hair looks splendid and I like the white tunic and belt that are printed on both sides of her torso. The legs are printed with a continuation of this design, along with some ties that keep the dust off Luke's boots	•
black Jedi knight costume for the lightsaber duel against Darth Vader in the Emperor's throne room. Her hair is shorter in Star Wars Episode VI: Return of the Jedi and this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minifigure while the torso is printed with a precise design on the front and bar this is reflected in the design of the minificulty with a precise with a pr	• •
Skywalker is armed with a one Lightsaber. The first Han Solo minifigure appeared in 2000 and its design has undergone many changes since then. The head, torso and legs have all been reviewed several times, but the same piece of hair has been used consistently so far. On the same piece of hair has been used consistently so far. On the same piece of hair has been used consistently so far. On the same piece of hair has been used consistently so far. On the same piece of hair has been used consistently so far.	•
element was created specifically for Han Solo and looks fantastic, as you would expect. The length is perfect and I love the central parting as well as the tangled texture. The piece is used in both versions of Han in this set and I'm sure it will soon appear elsewhere. Han's torso is on the front and back and this dark color contrasts well with the dark blue of his legs. These feature a belt and a holster pistol that is also included. Luke and Han appear in their stormtrooper disguises and come equipped with a helmet as an alternative to the	•
heads feature smiling and furrowed expressions and I am pleased to say that Luke's face is no longer printed with the excessive lines that appeared in the Cantina mos eisley 75052. The armor printed on the torso and legs is identical to that of any other Stormtrooper and the level stormtroo	el of detail is extraordinary
as usual. Both characters are armed with a standard blaster. Princess Leia appears in relatively few LEGO Star Wars sets and therefore I am delighted to see a revised version of the character based on her costume in Star Wars Episode IV: A New Hope. The hairpiece is an excunique style seen in the film and has not been worn since 7965 Millennium Falcon was released in 2011, while its head is printed with a huge amount of detail, despite the simplicity of the costume. I like the silver belt and	
back is a nice touch too, but the legs aren't printed which is a bit of a shame as I think some creases in the fabric would have improved this number quite significantly. This is the fourth appearance of the current Chewbacca minifigure and I think it looks wonderful. The dark brown	
is brightly accented with some medium highlights of dark flesh and this design continues in front of the legs. Chewbacca is armed with a stallion shooting archer just as he was on the 75105 Millennium Falcon last year. This is a brilliant accessory as it looks great, while it includes feat that standard shooters don't achieve in my opinion. A pair of gray handcuffs, ideal for impersonating imperial prisoners, are also included. This version of Obi-Wan Kenobi only appeared previously in 75052 Mos Eisley Cantina. His reddish brown robes are printed on his torso	
the pattern on the legs, but still not sure if this works as well as a fabric cover. Capes are often too wide for Knight minifigures but one could have worked in this case as Obi-Wan wears a hoodie for most of his time on the Death Star and this is unfortunately absent. However, the	
the hair piece resembles the hair style seen in the film, although the lack of texture looks a bit odd behind the detailed hair worn by Luke, Han and Leia. Obi-Wan is armed with a blue lightsaber in readiness for a duel against his former apprentice, Darth Vader. The R2-D2 receive	,
the 75136 Droid Escape Pod earlier this year and the same number appears here. Its dome head is decorated with dark blue panels and a pink processor status indicator, while the body features precise silver details on the front. It would have been nice to see some print on the lunfortunately it's left blank. The C-3PO minifigation has also been recently revised and now has printed eyes as well as detailed printing on the torso and legs. The colorful powerbus cables that are visible between the gold jacket look particularly impressive and I appreciate the significant the same number appears here. Its dome head is decorated with dark blue panels and a pink processor status indicator, while the body features precise silver details on the front. It would have been nice to see some print on the lunfortunately it's left blank. The C-3PO minifigation has also been recently revised and now has printed eyes as well as detailed printing on the torso and legs.	•
shame that this doesn't continue on the foot. I love the figure in its current state, but the arm print would have been welcome to differentiate this version of C-3PO from others based on the Original Trilogy, particularly since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment for its approximately since 5002948 C-3PO underwent the same treatment	pearance in the Star
Wars: The Force Awakens last year. Darth Vader underwent a significant upgrade to 75093 Death Star Final Duel last year and the number appears for only the second time in this set. The new helmet looks great and can be removed to reveal Vader's marked face, leaving behir around his neck. I like the new helmet, but by the fact that it is tilted up very slightly, giving the impression that Mr Sith is always looking at the ceiling! The white head is printed with some scars on the front and back, as well as sunken eyes. Darth Vader's head has been revised or continued with some scars on the front and back, as well as sunken eyes.	
this is my favorite yet and a similar level of detail covers the front of the torso. This is not continued on the back, but a soft fabric cover obscures the reverse side anyway. Lord Vader's hips and legs are printed with a continuation of the detailed robes and he is armed with a deadle	ly red-bladed lightsaber.
Perhaps the minifiga may also have come with a light blue helmet, replicating the moment Darth Vader is struck by the Emperor has also undergone some considerable changes in recent years and the latest version is by far the most detailed. I'm color bluish gray or tanned skin, but the latest printed design is certainly the best, with a delightfully malegolist smile on one side and an angry expression on Other. His torso and legs are printed with some simple robes and the Emperor also wears a soft fabric cover as well as a	•
included, but he is armed with two pieces of Force Lightning to be released on those who challenge this cunning Lord Sith. Grand Moff Tarkin was seen in only three sets based on Star Wars Episode IV: A New Hope, the last of which was 10188 Death Star! This updated value is	
think it was worth the wait as this is a wonderful figure. The light bluish grey hair piece introduced in 2015 is ideal for Tarkin and looks great here in conjunction with a detailed design on both sides of the head. The same piece is used in vader's 75150 TIE Advanced vs. A-wing St	•
expressions are appropriate given Tarkin's personality. The torso is printed with a new design that features a precise sortindicator and some code cylinders. I'd like to see double shaped legs to represent Tarkin's long black boots, but the simple grey design is satisfying and this is Moff Tarkin minifigure released so far. 10188 Death Star included the imperial conference room, just as this set does, but lacked occupants for the seven seats around the table. Two Imperial Officers are therefore an excellent addition to this set, although I am not fully satisfied we	•
bluish grey would be more appropriate for your uniform in my opinion and I think the figure found in 75055 Imperial Star Destroyer is superior. Also, I would have preferred to see an official minifiga of Admiral Motti instead of this generic character. The other figure is more impress	sive. His black suit is based
on Lieutenant Childsen's, but his head is not unique and he is labeled as a generic imperial officer in the box. I like the impression of the black officer's torso and cap, complete with printed code disc, matches the rest of his uniform very well. The emperor's sinister Royal Guard has slightly since they first appeared in 2001 and still wear detailed helmets over a simple black head. The covers look splendid, with dark red on one side and red on the other, as well as in 75034 Death Star Troopers, but are now made of a softer material. This may have been a good	
a new fabric element based on the guards' long robes, similar to Jyn Erso's poncho in the upcoming 75155 Rebel U-wing Fighter. Each figure is armed with a force pike that features a black handle and gray shaft, just as we see in the film. I think a 6L bar would be more appropria	ate as these accessories
look a lot like lightsabers. A couple of Stormtroopers are also This design was introduced in 2014 and I think it looks fantastic, with a perfectly detailed helmet and accurate impression on the torso and legs. Clone Soldier Clone are worn under the helmets and each soldier is armould have been nice to see more than two Stormtroopers included, but hopefully we'll see some in a Battle Pack next year, so it'll be easy to expand the crew if you want. Death Star Troopers occupy various roles aboard the Death Star and two are included in this set. Their to	
a silver belt over a black shirt, while the heads are printed with a chinstrap, as well as a smile on one side and a frown on the other. This strap aligns well with the detailed helmets and each minifigure is armed with a blaster pistol. The two Death Star Gunners included have only a	
look splendid, with precise helmets and some beautiful prints on both sides of the torso as well as on the legs. 10188 Death Star included a brilliant range of minifigures but I was occasionally left frustrated that there weren't enough imperial staff included, so I'm happy to see some	_
occasion. 75051 Jedi Scout Fighter was released in 2014 and the set included an RA-7 Protocol Droid with a single head that has not appeared elsewhere so far. This Death Star Droid looks absolutely brilliant, with a highly detailed head cast and an equally impressive design on legs are printed with a similar level of detail and I appreciate the strands that are visible on the droid's chest. I suspect this droid is 5D6-RA-7, a character who is briefly seen passing by Han and Luke while they are disquised as Stormtroopers on the Death Star. The last of the 25	
as an Imperial Astromech Droid in the box. This figure is based on R3-M3 and features a blue color scheme that is unlike any Astromech droid we've ever seen before. I like the trans-black dome in conjunction with the blue of the body and both elements are highly detailed to many and both elements	•
excellent Astromech droids released in the last two years. The Complete Model The spherical shape of the Death Star is instantly recognizable, as are many of the detailed rooms inside. The game value exceeds that of any other Star Wars set in my opinion and I also think the son display, although a fully enclosed design similar to 10143 Death Star II can be even better. I was twelve years old when 10188 Death Star was released and therefore I am in the unique position of being able to consider the merits of this set from the perspective of its main aud	
point of view of an adult collector. The original set was among my favorites as a child, but I had a number of minor problems with the set and it's interesting to see what they were It's hard to say 10188 Death Star beyond 75159 Death Star, as you can see in the picture below. The	e model on the right is the
newest design many of the changes are very small. Perhaps the most obvious upgrade was made to the superlaser that has been strengthened considerably and the turbolaser towards the base has also been completely redesigned and is greatly improved. I will continue to describe the review. The lower level is dedicated to storage and is mainly furnished with 1x1 and 2x2 cylinder stacks. The central turbolift is accessible from all four sides and the open area under the abyss features a black grille that is supported by three balusters. This is an improvement	Č Č
where only two balusters were used. However, the big problem with this section of the model remains. The entire floor is almost useless to the game as a result. The rest of the Death Star is occupied by movie theaters and this area would be	<u> </u>
space in which to play with the minifigures, if only it were easier to access. This could have been solved easily by designing each floor to be attached using only a few stallions, similar to a Modular Building, so that each could be removed to access the area below. The total inaccess the appropriate of the provided ways institled may with the original set and Would have liked it to have been solved as the removed to the	,
section has always instilled me with the original set and Would have liked it to have been improved to the revised version. The next floor consists of five bedrooms, the simplest of which represents the abyss. Luke and Leia cross this air pit in a famous movie scene and you can rethe included black string. This attaches to a section of the ceiling at an appropriate height, allowing a pair of minifigures to escape from their pursuers swinging from one side of the room to the other. I like the air intake mounted on the roof and the lights that run to the full height of	•
Four bridges are scattered throughout the room and there is room to stand a pair of minifigures in each of them. They are well decorated with 1x1 clips and three of the four edges are accessible from the neighboring rooms which is ideal for playing. One of the edges is connected	
energy coupling. A narrow walkway extends around the center column and the levers are placed on all four sides, unlike the original model, where only three were included. This structure hardly resembles what we see in the film and may have benefited from a couple of printed pri	
glad it's been kept to 75159. The floor of the garbage compactor is hoses and bars discarded. One of the can be used to prepare the compactor walls as they close, but you can only stop them using the red button hidden below the ceiling. This can be pushed to close the walls on	r pulled to open them and
the function works perfectly thanks to a basic technic mechanism that is hardly visible unless you are looking at the model below. The walls are decorated with an effective combination of gray and brown pieces that recreate the filthy surfaces seen in the film. The lights above the faithful to the source material and you can activate this door under the tractor ray terminal in the surrounding area. It leads directly to the elevator shaft, then provides a perfect means of escape for any minifigures unlucky enough to find yourself trapped in the garbage compactor.	<u> </u>
among the pieces of garbage and this strange creature has been significantly improved for the new model. His tendons are now formed using reddish brown horns and the tanned neck of the original monster was swapped for a more appropriate dark brown tone. In addition, you	can simulate hiding the
Dianoga underwater as a small hole in the ground allows your head to extend to the trash masher from below. A platform is hidden underneath and dianoga can be placed there to poke your eye into the trash compactor above. This works reasonably well, but by the difficulty in and you can fold the platform against the wall when it is not in use. The next room is occupied by a turbolaser and this has been completely redesigned for 75159 Death Star. The design of the turbolaser is considerably more faithful to the source material than the original model as	<u> </u>
spring-loaded shooters in place of the large rubber missile that was fixed to the top of the previous version. I like the greebling on both sides of the model and the hose is also a significant improvement. There are seats for two minifigures and each has a console to control the turb	•
barrel can be adjusted and the entire placement rotates on a turntable, producing a fairly wide range of motion. Two extra missiles can be cut into the wall, as shown below. The turbolaser is connected to the maintenance compartment by a large door and a yellow hazard strip rule indicate that this is a hazardous area. The room is dominated by a large yellow crane that has been changed considerably from the 10188 Death Star and now features four claws to grab boxes and other items. Some barrels are located behind the turbolaser while a rack of weap	0
maintenance compartment. These were the other way around in the original set, but I prefer the new arrangement, as this allows easier access to that are more likely to be frequently removed and replaced. The turbolift shaft can be in the corner and there are stairs to climb the e	
The cargo elevator is controlled using a crank on the side of the model that allows it to travel between the maintenance area and the hangar. Unfortunately, the elevator platform is far above the floor of this room and therefore it is quite difficult to carry troops or loads. This is very	
original set suffered from exactly the same problem and I would also like to see the rope removed in favor of a wall climbing elevator that could be mounted on a gear rack. Large gaps surround the lifting platform when it reaches the top level, which is quite ugly. The rope does not allows some lateral movement, so the gaps are not closed, but I think a Technic mechanism could have fixed in place. However, rolling the crank to lift and lower the lift works great and this is certainly a fun feature, even if it's not finished as well as	. , , ,
the hangar is much more impressive. The floor is decorated with a white line around the elevator and some white arrows that look splendid in contrast to the black floor. Three empty boxes are lined up along the wall and the TIE Advanced x1 deployment rack is hanging from the	ceiling, but the colorful
technic bushes used seem slightly incongruous given the stark nature of the Death Star design. Darth Vader's ADVANCED TIE rests on the rack comfortably, but tends to lean slightly forward as it is not perfectly balanced. The previous model was kept horizontally and I'm sure the refined to support the new vehicle more safely. The fighter underwent a substantial overhaul and incorporates several pieces that have been introduced since the original set was released in 2008. This TIE Advanced allows the new Darth Vader minifigure to stay inside, despite the	
helmet, which is quite impressive. The cockpit opens at the front and top, but putting Darth Vader in is still a bit tricky. Your arms should be angled carefully to ensure that they do not interfere with the canopy closure, but it works great and it is not visible when the cockpit is closed	•
leave it out if you want. The color scheme looks great and this model is much tougher than the 2008 version, but the hinge for the cockpit hatch is bigger and looks a bit odd from behind. Perhaps a pair of darker bluish gray pieces could have been used on the wings or the current server and the reason of the cockpit hatch is bigger and looks a bit odd from behind. Perhaps a pair of darker bluish gray pieces could have been used on the wings or the current server and the reason of the cockpit hatch is bigger and looks a bit odd from behind. Perhaps a pair of darker bluish gray pieces could have been used on the wings or the current server and the reason of the cockpit hatch is bigger and looks a bit odd from behind. Perhaps a pair of darker bluish gray pieces could have been used on the wings or the current server and the reason of the cockpit hatch is bigger and looks a bit odd from behind. Perhaps a pair of darker bluish gray pieces could have been used on the wings or the current server and the cockpit hat a particular server and the cockpit hat the cockpit hat a particular server and the cockpit hat the cockpit hat a particular server and the cockpit had a particular server and the co	
swapped for a lighter shade to better match the source material. A small control room looks at the and is accessed via a ladder. Some printed consoles and buttons are arranged around the room, along with a large dial that controls the sliding door underneath. The white white rather the door is closed and I think it would look much better in gray. The sliding door retracts completely on the wall along some smooth tiles, revealing a small step on the door. The slopes are used in the four corners of the door opening and these form in precise shape in relation to	
control room was notoriously difficult to access in 10188 Death Star and I'm pleased that this has been resolved for the new set, as the superlaser can now spin much more. The controls are easy to reach and you can support a pair of minifigures on the platform so that they move the superlaser can now spin much more.
