Below are the detailed features of call of duty mobile mod apk; 1. Unlocked characters In the mod version of this game, all participating characters were unlocked at the same time without crossing a specific stage. In the original and simple version of Call of Duty, the player must go and complete a certain number of levels in order to unlock the characters he wants, but this modified version removed the difficulty of going through different tools and stages. The process of unlocking a simple version was too time consuming and difficult. In the case of multiplayer mode, it made it very difficult to create a team, but the mod version has easily that annoyance by unlocking all the characters at the same time for each player without setting the appropriate goal to achieve. Aimbot Aimbot is another notable feature of the Mod version of Call of Duty, in which Aimbot helps the player kill the enemy in one shot. This helps the player in receiving and wasting too many calls to kill one enemy. Aimbot allows the player to shoot opponents from a distance by placing aimbot near the enemy and pressing the shot button from a distance. It automatically recognizes the target enemy and kills them with one try and call. Aimbot may seem somewhat difficult to use for beginners because it needs the player to be very specific when it comes to placing Aimbot near the enemy. But later on this feature is very useful for creating a mark in killing target enemies. Root is not necessary your android device must be rooted in the case of many video games and other processes to install mod versions of applications. But this obstacle has been removed for Call of Duty Mobile Mod APK because you no longer need to root your smartphone before installing the mod version of this game. Just install the Mod APK file from the download link or on Google Play along with for smooth operation. Auto-reloading weapons: Many video games need the player to reload weapons after regular intervals that can delay the process of killing the enemy, and it could also give the enemy enough time to attack. However, the Call of Duty Mobile Mod APK does not require players to follow the same pattern because it has introduced a feature of auto-transhiping weapons. This will buy you enough time to kill targets without making time. This feature also saves players from dispersing overcharging weapons over and over again and helps focus only on target enemies. Call of Duty Mobile Mod APK COD points offer unlimited COD points to unlock more features inside the game and also helps cover multiple reasons related to progression in the game. COD points also help the player to rise to the next level. It also has a big impact on the use of weapons because it allows players to upgrade weapons as well. Security and anti-Ban feature This mod version provides users with high security, where your account can not be blocked or hacked or removed by game developers. This version is released with an anti-ban feature that does not allow developers to disable this application. It was common for many mod versions of some applications to have been disabled by developers. However, this APK mod is immune to the ban. Online modes Mobile mod version of Call of Duty provides users with another amazing multiplayers feature, ie. This feature has created an amazing twist in video games and a better chance of achieving your goal by hitting as many goals as you can with the help of your friends online. Critical Tips about Call of Duty Mobile Mod APK: Here are some tips that can be very beneficial in achieving the goals of the game. This game is about hitting targets, killing enemies, earning more and more COD points and surviving attacks for as long as possible. Therefore, these tips can be very useful for overcoming the obstacles you face during video games. Choosing the right shooting mode There are two shooting modes that are developed by developers in Call of Duty Mobile Mod APK one is a simple mode and the other is manual mode. In simple mode, the shooting button works automatically without manual use by the player. It helps in killing targets very much and is quite useful for beginners in this game. However, this mode has a greater risk of missing targets due to automatic setup. The second mode is manual mode, in which the player has to shoot enemies manually by pressing the shooting button on his own. It is used by advanced players in other higher levels. And the risk of wasting ammunition and missing a target is very low in this mode. Using drones, this it is available if you are playing in multiplayer mode where you get a drone and rocket to advance. The missile can be used to kill enemies over a wide range by carefully directing the missile toward the target enemy's direction. All targets within range of the missile would be killed and gives a plus point in moving forward toward the next level. Drones are useful for knowing the positions of enemies on the map. As the drone flies in front of the player, it provides a wide view of the target enemies in front of you. By showing their ionic map positions, it would be easy to kill them without missing any goal of wasting ammunition or risking your health. Weapon Upgrade This feature allows you to become an advanced player by upgrading your weapon from time to time. Upgraded weapons will come with various and useful tools attached to them, such as magazines, supplies, etc. this feature is useful if one knows how and what weapon to use to kill the enemy. The more improved weapons, the more progress will be made. The height of the falling tip When the player falls from a height, it eventually leads to a decrease in his health and an increase in the chance of killing. So, if the player has to fall from a height, he must make sure that he does not fall straight rather glide towards the ground. It will not be risky and the player would not lose much health through this tip. It also allows players to land in a safe area where you can find shelter and easily target enemies.
