## Alpine ida-x305s bluetooth setup

I recently got the ida-305s and #1 kce-250BT for Christmas. I installed the system in my car that day everything works great except syncing my iPhone 4 with Bluetooth. I read the instructions and says turn bluetooth on and turn off the aux and aux+ I did. I turned off the car and then turned it back on. I go to my settings on my iPhone to turn on Bluetooth and it sees the kce-250BT. I click on it to pair it. I just have an hourglass basically and then it tells me it's able to pair up and to check if I have power on it and make sure it's in range. I had the iPhone right next to the KCE-250BT and it still can't pair it. I go to the screen where it wants me to put on the pair code 0000. I heard that the KCE-400BT works with radio but the Alpine site told me to buy KCE-250BT instead. I just think about buying 400BT but want to make sure that's the fact I have the wrong version. Any ideas? Edward - Just wondering how you went with this - I had issues with my phone as well, but I realized that it ended up paired with a Bluetooth disable on the iPhone, and again starting the Bluetooth service, this seemed to turn it on. Reboot also helps - Discussion started • #3 • January 24, 2011 After conducting further research, it came out to be an issue with a pink/black wire connection. In the Alps manual it says not to connect it so I didn't. Then it didn't work when I tried to link the phone to Bluetooth. But I found another forum article that said remember to hook pink/black wire otherwise it didn't work. The only reason he knew is that he expressed the Alpine by naming himself. The shop that brought the car there to connect the stereo didn't even know that. Everything's doing fine now! Thanks for checking out... Heard sound quality the better way with 400BT, have you experienced people you call complaining, or have it been smooth? The 400BT has parrot technology. It was going to soon add BT to my ida-x305 HU. - I thought both were parrots? - My fault, thought 350-BT. So what's the difference between 250-BT and 400-BT afterwards? 400BT supports BT Audio while 250 only supports HFP. - It actually seems like the KCE-400BT does run different hardware - os versions are different (250BT has v3.80 as latest and 400BT has v3.11). They may have different capabilities. - Interesting find tangla... Go to the authorized local vendor to ask about the difference soon. Sorry to OP, it doesn't mean jack yarn. - Sorry to reopen one. But I am. exactly the same problem . Running KCE-400 with my IDA-x305s. I plugged in, turned off the settings and ignition cycle and restarted the head unit. The iPhone finds KCE and then gives me the same error. so this is supposed to be the face wire . I attached it to the same pink wire in the IDA wire harness so maybe I should plug it in? 1 2 Table of Contents 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 50
