Benutzer-Menü Anmelden oder registrieren Sprache Deutsch Deutsch English Overview This is the main archive for rewrites of StevenRS11's measuring standards. This repository contains an up-to-date code base and valids the delivered repository. For Discord Server Main Clouds, we have a Discord server made specifically for talking about dimensional doors. It's also a place where devs come together to discuss current progress on certain issues and get feedback from the team. Discord Server: Click to open in browser or client if installed bugs and suggestions Error or just a suggestion that is in line with the mod's legend? Make it a ticket! Fault reports You can report problems that you can find on the problem page. Include the following information: In the version of Minecraft you are using (different versions may have bugs that are not available in others) your version of Taonta (different versions may experience bugs that are not available in others) List of other modes you use if the problem does not occur only with Dimensional Doors installed crash report or preferably a complete log (latest.log and debug.log). We have an appendage suggestions join our discord server or create a Github issue. Please include detailed what you want to see in the mod and explain how it fits into the mods' lore. Participation In the project there are many ways to participate. We recommend that you join our Discord server if you have any questions about how you can participate. Send dungeons Use /pocket blank blank_pocket_ to create an empty, closed pocket or /pocket blank void_pocket_ to create a pocket that contains only pocket limits<n> <n> a significant <n>frame with pocket size (number of pieces on either side - 1). Do not build outside the pocket boundaries, or it will be cut when it is saved. If you want to make your pocket bigger after you start building, you need to make a new pocket and copy what you built with WorldEdit. Use the /saveschem command to save your pocket and click Create <name>new file to send your pocket. If you have any questions, please join our Discord server. Translation This page contains all the languages currently translated. To give a translation, start by copying en_US.lang file into the text editor and saving it as the correct language code. Just translate what is to the right of the = sign, and click Create New File to send your translation. Testing You can help us test the latest dev release and report bugs before sending the following release by downloading and playing with the latest built jar here: IMPORTANT: These jars are untested and can cause the loss of pockets, tear connections or worlds. Always back up the worlds folder before testing them. Join the development of a team dimension that always wants to expand (the team currently has only 4 active members) and introduce new members to the team and community. Join our differences and talk to us! Tell me what you can do for me. Page 2 fork CannibalVox / DimDoors You cannot perform this operation at this time. You are signed in with another tab or window. To help Hexxit Wiki, reorganizing sections of the article, checking grammar and spelling, and doing other useful things to fix the article. Wylker Spotlights Minecraft Dimensional Doors tutorial This video shows the dimension of doors and their features. Dimensional Doors Dimensional Doors is a Hexxit mod that allows a player to create or enter areas called Pocket Dimensions. Pocket Dimensions can be accessed by means of measuring doors. These can be either player-created areas or given birth to a generation of the world. There are currently three dimensional door. They are a dimensional door, warp plastic and a transdimensional trap hatch. Each of these serves</name> </n> </n> </n> Purpose. If the dimensions of the pocket are kept even, each dimensional door descends to the level and each warp rises to the level. Every time the dimensional door passes without returning to the Superworld, it takes an extra warp to ascend to the Superworld. However, Transdimensional Trapdoor brings the player back to Overworld, although if the player goes too deep, trapdoor can be confused as to where they will be sent. The catch of these is that they are only disposable! No matter what the risk may be, rewarding these pocket dimensions may be worth it, as most breasts have looting such as diamonds and enchanted books. Creating a new pocket dimension creates a 29x29x29 block area, all in the 2x1x1 range. Pocket dimensions also seem to work just like the World, non-beds that explode like in the Underworld, and no crowds are created, meaning trees, farms or anything else can be protected in these dimensions. The only exceptions to this are Monster Spawner and Soul Cages. Blocks[edit | edit source] Technical blocks[edit source] Items[edit | edit source] Dimensions[edit | edit source] Dimensional Dungeons Limbo Pocket Dimensions Bugs[edit | edit source] When you return from a dimension created by Dimensional Doors, it is possible that it will reset the piece; causing all player-placed in that block to be completely lost. In some cases, ruptures can be eavesdropping, and you can't pass through them without first throwing any object through the rift to recreate itself and teleporate into the object's reach. Dying in a pocket dimension with less than 4 points available in your warehouse and rebirth in limbo will remove your worn armor starting with the helmet if it doesn't fit there because it places it there instead of equipping it. Leaving limbo and returning to the World can cause a piece, teleporting you to stone, causing suffocation and death. Be sure to back up your recording before switching to dimensional doors. If Chocobo drifts from warp door connecting two points at Overworld, the player will start falling through the blocks below them. If you sign out and then back in, the player won't see anything on the mini-map, and the game will be delayed from there. This seems to be going to permanently corrupt your world.
