Smalemmouth can also be found behind brush or other debris and where rocks breach the surface, creating oxygen-rich water. Hey, there's all the bass fans in Salemmonth! I recently received a question about a fish that seemed like a cross between largemouth bass and smallmouth bass. Sure enough, the little bass singer is known that you might have ever heard of being caught up in the name of meanmouth bass. Maybe you're thinking, it's a made fish, I've never heard of that! The truth is that medium oral bass is a combination between both largemouth bass and smallmouth bass or spotted bass and smallmouth bass. Hybrid breeding is two closely interseeding species that produce a cross between the two parents. It can produce some interesting combinations. Offspring are not likely to reproductive well but can compete against native species. Meanmouth got its name as described in this quote from the fisherman:The term meanmouth bass was born when Childers observed a school of largemouth-smallmouths attacking a female swimmer. Bass jumped out of the water and hit him in the head. Chest, he wrote and he was out of the pond. On another occasion, he watched meanmouths attack a dog that ventures into shallow water. In almost all cases of hybridization outside the lab, Smalemmouth have been involved. Geneticist Dr Dave Phillip, a colleague of the late Dr Childers, noted that fertilization of greatmouth bass eggs with Salemmonth sperm has led to more successful crosses than crosses (male and female bigmouths). The small bass of aggressive malemouth may be irritating when introduced to waters outside its natural limits where spawning locations are limited, or in modified habitats such as reservoirs. SourceRecently, smallies seem to be more hybrid with bass spotted in midwest states, leading to some concerns about their effect on smallmouth bass populations and dotted. In Tennessee, small ones have been hybridized with red-eyed bass, and in Texas, they have been found to mix with some florida strains on the bigmouth bass. I was recently fishing with a man who told me that I caught a medium mouth bass that was a combination between a small mouth and a big mouth. He said this point is the jaw hinge on what makes a difference. I asked him if they were like Hunting Snip to be a smart ass, and he asked how I knew it was a big mouth to answer. No one's ever heard of an average mouth bass because I like to think I'm not rube when it comes to fishing, although I might be in a public forum by asking that question. · Well I know there's such a thing as Snip in Ohio but that adds to that question.
