Alpha Protocol Absolute Priority. Alpha Protocol requires all travelers to do whatever it takes to solve the problem at hand. Protocol 1 The mission comes first. This means setting aside all other priorities for the task at hand. A traveler must be dedicated to the mission, and it must be the most important thing for them. Completing the mission is the only task that really matters. Everything you do as a traveller should somehow go further the purpose of the mission. Protocol 2 Never compromise your coverage. This has two parts: Don't call yourself by future names Leave the future in the past. Do not use future knowledge for personal purposes. Either of these things could mean that people will find out that there is something in you, that you are not really who you say you are. Self-control is the key to becoming a traveller. You are not what you used to be in the future. You must assume the identity of your host and recognize your team only as their new identity. The future knowledge you have is for the improvement of your mission and your fellow travelers, not for your own advancement. Protocol 2H Updates should not be discussed with anyone. Never. Periodically, a historian will need to be updated due to changes in chronology caused by travelers. Updates will include historical information relevant to a team's role in the Grand Plan, including potential candidates, investments, etc. But by its very nature, updates can also include historical information about your team members, your loved ones, and the historian. This is a burden they will have to carry with them until the day of their death, a date that, for obvious reasons, will be omitted from the update. Protocol 3 Don't take a life; do not save a life unless otherwise stated. Don't interfere. That's not why you're here. Changing the past can have disastrous consequences for the future, and mission is the only change that has been prescribed. Refrain from putting yourself in a position where you must take or save a life. You don't care about others, don't interfere. Protocol 4 Don't happen again. This can interfere massively with the mission, and involves changes in the past that have not been approved. Refrain from creating relationships that can lead to this. Don't complicate things. Protocol 5 In the absence of direction, maintain your host's life. Keeping your host alive means staying alive to advance the mission. Maintain good health and avoid situations that put your host at risk. The death of your host means your Death. You were sent here for a reason, and the mission needs you. Protocol 6 No deep inter-team/web communication except in case of extreme emergency or when it is sanctioned. Your team is the only group of travellers you should interact with. You share a common mission, and the others have their own missions. You don't need to interact and should refrain from so at all costs. Extreme emergencies may justify an exception to this rule, but the situation must indeed be disastrous. Omega Protocol The director will no longer interfere within this time frame. Those who are part of the Traveler program are free to live their days, as they are, as they see fit. Omega Protocol can be promulgated because the Grand Plan has succeeded and we are now on the optimal path to a better future or because there is no possible way to save the future. Edited Broken by recent losses and a new sweeping protocol, travelers face a bleak future with only one long-lasting chance to succeed in their mission. Everything is back to normal, so MacLaren would not have been sent in the first place, so no crazy adventures in the twenty-first, no 001 to build a local machine, no leap back to 2001. Their all is also to save the world, the collapse of civilization causes the world controlled by a machine, the exact future they wish to avoid.posted by His thoughts were red thoughts at 00:31 on December 18, 2018 Travelers began as a joint show of Canada (Showcase) - Netflix production, but moved to Netflix only for this season. In September at DragonCon, Leah Cairns (Kat) said that Netflix had not

made a decision as to whether they would see the light of a fourth season, it would depend on all their algorithms made from the S3 audience. My guess is that Wright and Co has decided to make it a series finale just in case, but will find a way to write VER 2 if Netflix says it's a go.

posted by rmd1023 at 5:57pm on January 8, 2019, I don't have much to add beyond what everyone said. agree with most of the points. It was a great end and gives them room for next season. I'm glad that in the end, Mac did well by Kat and Prime-Marcy and David could still get together. But I'm a little sad that it means that Prime-Carly could still be killed by Prime-Jeff, who would end up in jail instead of staying alive long enough to be crushed. In a way, they were both dead as we know them since our Carly and Jeff are travelers. And it also means that Prime-Trevor would still die in this fighting club, and Prime-Philip could still overdose. I guess Marcy gets the happy ending because she wouldn't have been in this situation in the first place if 001 didn't come back.

More recent You're not logged in, either log in or create an account to post comments Episode Guide Ilsa Yates Protocol 3 Perrow Naomi Philip Trevor Archive David Omega Protocol Pick up where it left off last year, Travelers is coming back with another underrated sci-fi installment on Netflix that just seems to be getting better and better. While the first season dealt with episodic content with a story loosely related to all of this, the second season felt like a much more serialized drama, keeping a coherent story woven throughout. With the third season, Travelers takes the best aspects of the first and second season, offering a cohesive, well-written story that starts strong and just gets better and better than the episodes tick by. After the dramatic events of the shooting and the aftermath of last year, Grant McLaren and his group of future combat agents with the ramifications of their actions have had on their loved ones. The first half of the season addresses many of these character issues, with Philip and Trevor both facing their own internal struggles while the others in the group try to secure their relationships. All this is built around the second half of the season which sees a return of the Faction in a Way. Without giving too much away, the finale is sure to raise more than a few eyebrows and Netflix almost certainly needs to deliver a fourth season given the shocking ending here. I mentioned earlier on character issues and that's it's forms the heart of the drama of the third season. Kat is convinced that her husband is someone else and asks for the help of a therapist, while hallucinating that Grant is trying to do her wrong. Jeff grapples with his inner demons and succumbs to his old eating habits while David continues to be the kindest man in the whole show. His bow becomes much more important later, but for now, the first half of the season sees him determined to learn to fight and not have to rely on Marcy all the time. Bullish Grace adds a comic flair during the early segments, but quickly becomes more solemn and sympathetic as Trevor's character issues are brought to the table. This is not even mentioning Yates and Grant forming a loose alliance, Philip deciding not to take the director's pills and the continued presence of Travellers being brought back to the present. There's a lot going on this season and this abundance of action and character work makes the third season a surprisingly easy show to binge. I watched the 10 episodes yesterday and while some shows leave me a little tired with such a dedicated schedule to watch, Travelers just left me invigorated and eager for more. The characters are ultimately what keep this show together and although there is only a pinch of traditions added this year, we learn a lot more about the end of the game. In addition to this, we also learn how information from the past is obtained in the future in a particularly tense and heartbreaking episode called David. In fact, the last three episodes of the season are outstanding and by far the best work Travelers has released since it went on the air in 2016. After three years of character building, we finally reach a point now where the show can take bold risks and boy makes it deliver on this front. I'm pretty sure I said it last year in my season 2 review and I'll repeat it this year. Travelers is a show that knows what it is and who its audience is. It's a show that doesn't try to be anything other than a very nice, well-written sci-fi film and in this respect it delivers in a great way. The characters are well written, the individual stories work well while the overall plot built into this year is as tense and dramatic as ever in the show's history. The finale is likely to raise a few eyebrows if and for me, renewing Travelers for a fourth season would be the perfect Christmas gift after this wonderful sci-fi season.
