Cash dividends and treasury stock purchases quizlet

Dividends in shares come from a company's profits, which are distributed to shareholders. Companies choose to either pay dividends in cash or in additional shares. The amount of the dividend is usually decided by the company's board of directors, and for cash dividends, shareholders receive a cheque each quarter. Companies that pay dividends with shares pay at much less frequent intervals. A dividend represents your share of profits, of a company in which you own shares. When you invest money in a company's stock, you are actually buying a share of ownership in that entity. In exchange, you can vote on certain shares of the company, such as electing new members to the board of directors. You also have the privilege of being paid a share of the company's profits, as decided by the board of directors. Each quarter, the Board of Directors announces the company's earnings, and with this, the amount of the dividend per share, if any, that you can expect to receive for this quarter. When you own shares that pay dividends in cash, you will receive them in the form of a cheque, usually paid quarterly. Many people invest in dividend-paying stocks to create a retirement income stream. If you were accumulating a large number of shares in your portfolio, you could earn money in the form of capital gains on your shares when prices go up, but you can't use cash unless you sell your shares. Investors rely on companies to pay dividends consistently, and if a company changes its policy and stops paying or significantly reduces its dividends, investors can look unfavorably at the company, which could lower its share price. When you buy a share that pays a dividend, if you hold your shares on the record dividend date, you will be eligible for the next dividend. Each quarter, companies have a dividend reporting date where they announce the amount of the quarterly dividend and the payment date. Once a company determines its record dividend date, it is assigned an ex-dividend date, usually two days before the stock's record dividend date. Investors who buy the stock before the ex-dividend date are eligible for the dividend. For example, the dividend of Coca-Cola Company, which has been paying dividends since 1920, would be described as: Declared: 02/15/18 Ex-date: 03/14/18 Record: 03/15/18 Payable: 04/02/18 Amount: \$0.39 (per Type: Ordinary Cash The Company would also provide dividend-relevant notes. In this case, Coca-Cola noted that the dividend had been adjusted for a 2-to-1 stock split. When a company pays dividends, the money comes from its retained profits. This amount, as indicated on the company's balance sheet, represents the company's accumulated net profit since its inception. Each accounting period, the net income reported on the company's earnings statement is transferred to this Account. Dividend payments do not come from the net income of the current period, so they do not reduce the company's earnings and are not classified as an expense. When held as part of a diversified investment portfolio, dividend stocks are excellent assets. Dividends are a portion of the company's profits that are returned to shareholders as a percentage of the value of the security. Dividend size is set by the company's board of directors, but the average is about 2%. Although 2% doesn't seem very high, it's definitely a higher return than you'll see from your savings account anytime soon. Dividend Share Benefits Dividend stocks generally pay dividends are more expensive than shares in a small company, but they are worth investing and adding to your portfolio anyway. Just check these benefits: Stable businesses: Companies don't even plan to pay dividends until they have a steady cash flow that exceeds their growth or expenses. The shares of these companies may never triple overnight, but they will not crash either. Regular payments: Dividend payments are made on a fixed schedule (set by each company), which is incredibly valuable if you are retired, but really, who would not benefit from a constant passive income? Compound returns: By reinvesting your dividends in the company, you regularly increase your equity holdings without having to invest more of your available cash. Think of it as a much more profitable savings account. The best dividend stocks of 2015 As a general rule, the companies you see offering dividends are so large and successful that they have become familiar names. Don't get courted by your familiarity with (or even the love of a certain company) when you invest in dividends and decide in which companies you want to buy. Instead, look for three things: stable cash flow, high dividend yields and low stock volatility. The higher the dividend yield, the higher your dividend will be, but the higher the payment on the market will not help you if your market value collapses because the company was a bad investment. The best thing you can do before you buy a stock is to do your research, but these three companies are great places to start. Coca-Cola: This company is a real household name. Coca-Cola has a concentrated growth strategy (which shows that they are serious about increasing the flow of a dividend yield of 3.3% (which is above average), and a beta of 0.51 (indicating low volatility)). Consolidated Edison: Known as Con Ed to its customers, Consolidated Edison has a 192-year corporate history. Con Ed provides utilities to millions of customers in New York, has a dividend yield of 4.4% (and a 40-year history of increasing dividend payments per year), and an incredibly low beta of 0.11 (which translates as very, very stable). General Mills: General Mills has been paying its non-issued dividends for more than a century, which you think it's a company that knows how to manage their cash flow! Their dividend yield is 3.1%, which is 50% higher than the 2% average. Like the other two companies on this list, General Mills is stable: their beta score is 0.19. First BanCorp. (the Society) (NYSE:FBP), the bank holding company of FirstBank Puerto Rico, announced today that its Board of Directors has declared a quarterly cash dividend of \$0.05 per share on its outstanding common shares. The dividend is payable on December 11, 2020 to shareholders of record at the close of business on November 27, 2020.About First BanCorp.First BanCorp. is the parent company of FirstBank Puerto Rico, a state-chartered commercial bank operating in Puerto Rico, the U.S. and British Virgin Islands and Florida, and the FirstBank Insurance Agency, LLC. FirstBank Puerto Rico's subsidiaries include First Federal Finance Limited Liability Company and First Express, Inc., two small loan companies. BanCorp's first common shares on the New York Stock Exchange under the symbol FBP. Safe HarborThe current press release may contain forward-looking statements regarding the Company. Investor The Investor DailyDow Jones' futures were weaker early Wednesday Tuesday as they watched the georgia Senate second-round vote. Apple has cracked back, while JD has surged beyond a new point of purchase. In a sign of the growing confidence that Chinese stock markets are stabilizing, they have given pension funds access to the stock market in a historic move! QuantumScape founder Jagdeep Singh speaks with Yahoo Finance after the company's stock fell 40% Tuesday morning. I think investors deserve much better than to say that there is no opportunity for income in this market. Here's how the president-elect says the \$2,000 payments could come out immediately. Sie haben 'ber Forex nachgedacht, es jedoch niemals ausprobiert? Legen Sie jetzt mit einer mehrfach ausgezeichneten Plattform los! The greater probability of higher taxes and increased regulation with the presidency and Congress controlled by the Democrats had futures contracts on lower stock indexes. Bill Gross's end of 2020 may have been more eventful than most. Not only did the former bond king spend the last weeks of the year in an Orange County, California, courthouse defending his right to blame the Gilligan's Island theme song from his Laguna beach mansion, he also managed to reflect on what he calls the Bubblicious Kid Market. On September 14, Gross warned that there is little money to be made almost anywhere in the world and urged investors to favour sukuk areas such as tobacco, banks and foreign companies listed on foreign markets. Finally, he got to the right thing and re-examined the drivers of the market race, namely intense speculation as well as tax pumped, the central bank started corporate profits as the Federal Reserve shifted real interest rates to near zero. Upstart lidar company Aeva is led by two former Apple executives looking to shake up the industry. Wer passt zu dir am Besten? Jetzt Matches erhalten. 51% Frauen 49% M-nner.There's a strong sense of growth among investors - relief - that the new year will feature lower volatility than 2020. That would be enough to stimulate spirits, but even better, there is also a sense that markets will increase in the new year. Marko Kolarovic, JPMorgan's well-known quant expert, sees the early stages of a positive feedback loop, with lower volatility and systematic investment strategies coming together to generate gains, attract more investors - and, in Kolarovic's view, push the S-P 500 to 4,600 by the end of the year. It's all about 25% increase for the index. A general market environment like this is bound to produce a lot of stock gainers, and Wall Street analysts are busy pointing them out. Among other things, they operate penny shares, shares priced less than \$5 per share. Their lower starting price makes pennies the logical place to look for huge returns on investment. Although their risk is high, even a small gain in absolute numbers will turn into a massive percentage gain in the share price. Using the TipRanks database, we have identified two penny stocks that the pros believe could see explosive gains in the coming months. Not to mention that everyone gets a Strong Buy consensus rating from the analyst community.9 Meters Biopharma (NMTR)Some biopharmaceutical companies have a broad approach, while others focus on a niche. 9 Meters is one of these, taking as its goal unmet needs for gastrointestinal patients. The company's development pipeline presents drug candidates under study as treatments for short bowel syndrome (SBS) and celiac disease (CED), both dangerous and difficult to treat. For the details of the pipeline, the 9 metre flagship product, Larazotide, is in phase 3 development for the treatment of CeD. CeD affects about 1% of the population, but there are no approved therapies. Leading data from the study are expected in the second half of 2021.In addition, last December, the company announced that it had reached an agreement with EBRI, the European Institute for Biomedical Research in Salerno, to study larazotide as a potential treatment for respiratory complications due to COVID-19. The other important drug in the company's pipeline is NM-002, for SBS. The company recently announced positive Phase 1b/2a results, with a measurable impact on the symptoms of the disease from a compound that was well tolerated by patients. NMTR strong pipeline and \$0.89 share price have marked substantial praise from the pros on Wall Street.One of these NMTR bulls is Truist Sikripa Devarakonda. Citing larazotide as a key element of his bullish thesis, the analyst noted: We recognize that investors are likely to see a pivotal trial in a program of celiac disease difficult to break as high risk despite encouraging Ph2b data. We model \$705 million/\$353 million in unadjusted/adjusted peak sales and see a potential 400% increase to 1650% over the positive Ph3 reading. Devarakonda also sees significant unmet needs in SBS and continues to believe that NM-002 has a differentiated profile relative to SOC. Its main takeaways from recent Phase 1b/2a results are: 1) We believe that the drug has shown early activity in patients with SBS; all 9 patients showed significant reduction in total stool discharge volume; 2) The average reduction in OST was 42% from the baseline; 2) The answers quickly, with effects on TSO seen within 48 hours of dosing; 3) Safety profile seems favorable, we would like to see greater durability. To this end, Devarakonda estimates that NMTR shares a purchase and a price target of \$5. This figure expresses confidence in NMTR's ability to skyrocket by 462% in the coming year. (To see NASDAQ: TSLA) receives a bullish call and a new street-high price target. The Tesla Thesis: In a note released after Tuesday's close, Morgan Stanley analyst Adam Jonas reiterated a overweight rating on Tesla while raising the company's price target from \$540 to \$810. Jonas issued a cautious note in December calling the entry into electric vehicles by Apple Inc (NASDAQ: AAPL) a new bear case for Tesla.Related Link: Morgan Stanley improves Tesla on growth potential in integrated companiesThe Tesla Thesis: The 61% year-over-year gain in deliveries in the fourth quarter was better than expected by Jonas. The analyst raised the volume estimate for 2030 from 3.8 million units to 5.2 million units. We continue to believe that Tesla can outperform our industry in 2021, Jonas wrote in the new note. The analyst said the market has chosen to discount Tesla's value relative to its peers despite a range of high results. Tesla's business model can unlock recurring revenue from mobility services that are faster and more cost-effective than the competition, Jonas said, calling Tesla an elected official for the automotive Internet. It's hard to find a more innovative company, especially in the electric vehicle and autonomous vehicle markets. Jonas said calling Tesla the best positioned. TSLA Price Action: Tesla shares closed up 1% at \$735.11 on Tuesday. Shares reached new divisional adjusted highs of \$740.84 earlier in the session. The stock was up 2.17% at \$751 in after-hours trading. Benzinga does not provide investment advice. All rights reserved. A new year, a new addition to the equity portfolio - what can make more sense than that? The right time to buy, of course, is when the shares are down there. Buying low and selling high may be a bit hackneyed, but it's true, and the truth has the power to stay. But markets are up. The NASDAQ rose by 43% in 2020, and the S.P. 500 posted a gain of 16%. With a market environment like this, finding stocks that are caught in the doldrums is more difficult than it seems. That's where Wall Street pros can lend a hand. We used the TipRanks database to identify three stocks that fit a profile: a share price that has fallen by more than 30% in the past 12 months, but with at least double-digit upside potential, according to analysts. Not to mention that everyone achieved a moderate or strong purchasing consensus rating. Esperion (ESPR)We will start with Esperion, a company that specializes in therapies for the treatment of high levels of low-density lipoprotein cholesterol - a major contributing factor to heart disease. The company's main product, bempedoic acid, is now available as tablets under the Nexletol brands and Nexletiz.In February 2020, nexletol and nexletiz have been approved as oral treatments to lower LDL-C. Bempedoic acid remains in clinical trials of its efficacy in reducing risk for cardiovascular disease. The trial, called CLEAR Outcomes, is a large-scale, long-term study that follows more than 14,000 patients with first-rate data expected in the second half of 2022. The study covers 1,400 sites in 32 countries around the world. Esperion shares peaked last February after FDA approvals, but the stock has since fallen. Shares are down 65% since their peak. Along with the decline in the value of the shares, the company posted a decline in second-quarter revenue in the third quarter, with the front line slumping from \$212 million to \$3.8 million. Since the third quarter report, Esperion has announced the price of a \$250 million offer of senior subordinated notes, at 4%, maturing in 2025. The offer gives the company a boost in the capital available for further work on its development pipeline and its marketing efforts for bempedoic acid. Chad Messer, who covers the ESPR for Needham, sees the offer of notes as a positive net for Esperion. We believe that this cash position will be sufficient to support Esperion until 2021 and profitability in 2022.. We believe that this funding should help to put an end to concerns about Esperion's balance sheet. Despite a difficult launch for NEXLETOL and NEXLIZET, product growth continued in 3T in a context contraction of the LDL-C market. This growth trajectory suggests a potential for rapid acceleration when conditions improve, Messer wrote. To that end, Messer ESPR rates a strong purchase, and its price target, at \$158, suggests that the stock has room for huge growth this year - up to 481% from current levels. (To see Messer's background, click here) Overall, Esperion has 6 recent comments on the record, with a breakdown of 5 purchases and 1 hold to give the stock a strong buy rating from analyst consensus. Lia Lia at \$27.16. have an average price target of \$63.33, implying a one-year increase of 133%. (See analysis of ESPR shares on TipRanks) Intercept Pharma (IPT)Liver disease is a serious health threat, and Intercept Pharma is focusing on developing treatments for some of the most dangerous chronic liver conditions, including non-alcoholic steatohepatitis (NASH) and primary bile cholangitis (PBC). Intercept has a research pipeline based on FXR, a regulator of bile acid pathways in the liver system. The action of FXR affects not only the metabolism of bile acid, but also the metabolisms of glucose and lipids, as well as inflammation and fibrosis around the liver. The main compound, obeticholic acid (OCA), is an analogue of CDCA bile acid, and as such may take a role in the FXR pathways and receptors involved in chronic liver disease. The treatment of liver disease by FXR biology has direct applications for PBC, and shows promise to treat Nash complications. ICTP's shares fell sharply last summer when the FDA rejected the company's request to approve the OCA for the treatment of NASH-related liver fibrosis. This delays the drug's potential entry into a lucrative market; there is currently no treatment for NASH, and the first drug to obtain approval will have advance to reach an estimated market of \$2 billion and \$5 billion in potential annual sales. The effect on the title is still being felt, and the ICTP remains at its low point of 52 weeks. In response, in December 2020, Intercept announced major changes in senior management, while CEO and Chairman Mark Pruzanski announced that he was stepping down on January 1 of this year. He is replaced by Jérôme Durso, former director of the company, who will also hold a position on the board of directors. Pruzanski will remain as an advisor and will serve as a director on the company's board of directors. Piper Sandler analyst Yasmeen Rahimi takes a deep dive into Intercept's ongoing efforts to expand the applications of OCA and resubmit its new drug application to the FDA. She sees the transition of leadership as part of these efforts and writes, [W]e believe that Dr. Pruzanski's dedication to transforming the liver space is always strong and will continue to guide ICTP's progress as an advisor and board member. In addition, we have had the pleasure of working closely with Jerry Durso and believe that he will transform the company and lead icPT's success in the PBC market and the path to the potential approval and commercial launch of the OCA in NASH. Rahimi takes a long-term bullish position on ICTP, giving the stock an overweight rating (i.e. buy) and a price target of \$82. This figure indicates an impressive 220% increase over the next 12 months. (To see Rahimi's background, click here) Wall Street is a little more divided on the drug maker. ICTP's moderate purchasing consensus rating is based on 17 reviews, of which 8 9 Cales. The share price is \$25.82, and the average price target of \$59.19 suggests a potential increase of 132% for the next 12 months. (See analysis of ICTP's actions on TipRanks) Gilead Sciences (GLD)Gilead had a year as a fireworks display - from top to bottom. The gains came in 1H20, when it appeared that the company's antiviral re-employment would become a primary treatment for COVID-19. In November, however, even though the re-division had been approved, the World Health Organization (WHO) recommended not to use it, and COVID vaccines currently on the market made the re-division irrelevant to the pandemic. This was just one of Gilead's recent headwinds. The company has worked, in collaboration with Galapagos (GLPG), on the development of filgotinib as a treatment for rheumatoid arthritis. While the drug received EU and Japanese approval in September 2020, the FDA refused approval and Gilead announced in December that it was suspending U.S. development efforts on the drug. Nevertheless, Gilead maintains a diverse and active research pipeline, with more than 70 research candidates at various stages of the development and approval process for a wide range of diseases and conditions, including HIV/AIDS, inflammatory and respiratory diseases, cardiovascular disease and hematology/oncology. On a positive note, Gilead reported better-than-expected third-quarter profit, with top revenue of \$6.58 billion, beating forecasts by 6% and growing 17% year-on-year. The company updated its full-year 2020 forecast for product sales, which rose from \$23 billion to \$23.5 billion. Among the bulls is Hartaj Singh, an analyst at Oppenheimer, who gives GLD shares an outperformance rating (i.e. buy) and a price target of \$100. Investors should pocket a gain of 69% if the analyst's thesis is being out. (To see Singh's background, click here) In support of his position, Singh writes: We continue to believe in our thesis of (1) a reliable activity of remdesivir/other drugs against SARS-CoV flares, (2) core business (HIV/oncology/HCV) that is growing at single digits over the next two years, (3) operating leverage that delivers greater earnings growth and (4) a dividend yield of 3% to 4%. What does the rest of the street think? If

we look at the distribution of consensus, the opinions of other analysts are more generalized. 10 Purchases, 12 takes and 1 sale add to a moderate buying consensus. In addition, the price target \$73.94 indicates a potential increase of 25% over current levels. (See GILD inventory analysis on TipRanks) To find good ideas for battered stocks trading at attractive valuations, visit TipRanks' Best Stocks to Buy, a newly launched tool that unites all tipRanks equity prospects. The rebranding comes as Pfizer (ticker: PFE) buys a slimming down that has seen it get rid of a range of companies, to focus almost entirely on the invention and purchase of new drugs. The detour of the big blue pill also comes, incidentally, months after the company ran out of the division that sells Viagra, Pfizer little pill MORE: CCO green light for banks to use stablecoins, Brazil's booming cryptocurrency sector and tighter supply of bitcoin extraction machines. Ich habe fast alles auf meinem Computer verloren - dieses Geret hat mich gerettet! Americans can now check the status of their second stimulus check using the Internal Revenue Service Service tracking tool. (Bloomberg) -- Zhong Shanshan is setting new wealth records. The president of Nongfu Spring Co., a ubiquitous bottled water company in China, is now richer than Warren Buffett as his fortune has jumped from \$13.5 billion to \$91.7 billion since the beginning of the year, according to the Bloomberg Billionaires Index.Zhong, 66, is now the sixth richest person on the planet. Nongfu shares jumped 18% in the first two trading days of 2021, taking the lead since their September listing at 200%. This is only the second time a Chinese national has entered the world's Top 10 -- real estate mogul Wang Jianlin reached 8th place in 2015 -- and no one on the mainland has ever ranked higher on Bloomberg's Wealth Index since its launch in 2012.Nicknamed locally the Lone Wolf to avoid involvement in clubby business groups or politics , Zhong also took vaccine manufacturer Beijing Wantai Biological Pharmacy Enterprise Co. public in April. The stock climbed more than 2500%. Zhong dethroned India's Mukesh Ambani as Asia's richest person last week and is about to enter the rarefied kingdom of individuals worth more than \$100 billion. Buffett is outside this group with a fortune of \$86.2 billion. But Berkshire founder Hathway Inc. has donated more than \$37 billion in shares since 2006.Investors are taking shares in Chinese consumers as the country shows it is recovering from Covid-19, while analysts have grown increasingly bullish on Nongfu.Zhong has also helped four parents become billionaires. His younger sister, Zhong Xiaoxiao, and three of his wife's siblings each hold a 1.4% stake in Nongfu worth \$1.3 billion, based on the property listed in the company's prospectus compared to last year. The company has produced dozens of millionaires, including more parents and employees of Zhong. While Covid-19 disrupted much of the world's economy in 2020, it was a good year for the world's ultra-rich. The 500 richest people added \$1.8 trillion to their fortunes and were worth a total of \$7.6 trillion at the end of the year. Zhong, Asia's biggest winner, has amassed more than \$71 billion, most after Tesla Inc, Elon Musk and Amazon.com Inc, Jeff Bezos.A notable exception is Jack Ma, until recently the richest person in Asia. He has not been seen in public since Chinese regulators torpedoed Ant Group Co.'s \$35 million initial public offering. Its net worth fell by about 10 october and he is now the 25th richest person in the world. (Updates with move from the Nongfu list in the third paragraph) For more items like this, please visit us at bloomberg.comSubscribe now to stay ahead with the most reliable business news source.©2021 Bloomberg L.P.KEY WORDS It's billionaire investor Carl Icahn talking to CNBC during Monday's sale on the potential for a sharp stock-market drop.
