Penn state graduation gown

high school graduation rate. According to the Common Data Core of the National Data Center, D.C. has a graduation rate of 68.5%. That's 20% lower than the national average. It's a pretty shocking number, especially for a place in the capital of the United States. You could say it's because there aren't many schools in the district. However, if you include private and public schools, there are plenty of options out there. Fun fact: Al Gore called the District of Columbia home! (Image via Pinterest) As for continental states, the state with the lowest graduation rate is New Mexico. This is certainly not great, considering that the United States has about an 88% high school graduation rate (also known as a number that is not too difficult to reach). Although we would like to say that it is improving, New Mexico's statistics seem turbulent. Over the past few years, the state managed to increase its graduation rate from 2010-2011 when it was just 63%. However, the trend appears to be inconsistent. The rate bounces between 63% and 73.9%, the latter being the most current graduation statistic. Maybe they've finally broken the bad streak and you'll see an upward pattern. Fun fact: Neil Patrick Harris comes from New Mexico! (Image via Pinterest) Alaska has some problems, but one of its biggest is its high school graduation rate. The most current statistics show that 78.5% of high school students actually finish. Well, we have to say the state is getting better. During the 2010-2011 school year, only 68% of students graduated from Alaskan high schools. Now number has improved by 10%. It's actually been improving steadily year after year, so whatever they're doing is working. Fun fact: Sarah Palin is from Alaska! (Image via Pinterest) Arizona statistics aren't great, and they could definitely improve. About 78.7% of high school students which is about 10% lower than the national average. Like many down-listers, Arizona has struggled to keep kids in class. During the 2010-2011 school year, the statistics were very similar: 78% of students graduated. Unfortunately, that number continued to drop until 2016, when they bounced to 80%. What's going on? They were on an upward path, and now, they're falling again! Fun fact: Emma Stone is from Arizona! (Image via Pinterest) So Oregon's supposed to be super smart, isn't it? That's something they tighten. Turns out they don't have big statistics. Currently, the high school graduation rate is 78.8%, but it could be worse. Previous years were much worse. For three consecutive years (from 2010 to 2013), the state could not even break 70%. Only very recently has the state changed something that has encouraged children to stay in school. I must say that a 10% jump is pretty good, though. Fun fact: Ty Murrell called Oregon home! (Image via Pinterest) Believe it or not, Michigan has remained fairly stable over the years. The lowest was 74% in 2010-2011, but that was a while ago. By 2015, the high school graduation rate reached 80%, and has been hanging out there ever since. Data from Michigan's own department of education shows that the 2019 graduation rate improved quite a bit. They list the rate at 81.41%. It may not be much longer than they are at the bottom 10! Fun fact: Believe it or not, Eminem is from Michigan! (Image via Pinterest) Idaho is very strange. The National Center for Educational Statistics had no data for Idaho until the 2013-2014 school year. There are only two other states that had this phenomenon (Oklahoma and Kentucky). We had to dig a little, and we found a note from the Idaho State Department of Education indicating that idaho high school graduation rate is increasing (supposedly). By 2018, 80.7% of students graduated from high school. The previous year was 79.97%, while the previous year was 79.66%. Well, technically they're right. Graduation rates are improving even if it's only 0.01%. At least 2018 is higher than that. Fun fact: Aaron Paul is from Idaho! (Image via Pinterest) For some reason, Colorado is another one we expected to be better. Not that 80.8% is awful (at least they're not as low as D.C.), but they have some pretty great schools. If you look at Colorado Department of Education statistics, it looks a little better, although most children take more than four years to get through high school. State lists for a six-year graduation rate the 2017 class will be 85.7%; we say again: six years. That's closer to the national average, but six years is pretty. For 2019, the four-year graduation rate is much higher than the previous year at 81.1%. Fun fact: Amy Adams comes from Colorado! (Image via Pinterest) South Carolina has some work to do, but we're actually a Impressed. As of 2011, the graduation rate was miso 74% – not even close to the national average at the time. Somehow, he's been hit by up to 81% for the 2018 graduation year. Good job, South Carolina! Fun fact: Andie MacDowell is from South Carolina! Now for the bad news. That figure was actually 83% for the 2016 graduation year. It could certainly be a fluke, so we're not going to judge. The desertions have decreased in the last two years so that that number can rise again. (Image via Pinterest) Louisiana is another state that has drastically improved its education system. By graduation year 2018, they managed to bring 81.4% of their students to graduation. Yes, that's lower than the national average, but look at previous years. Not to throw numbers at you, but in 2011 it was 71%, 2012 was 72%, 2013 was 74%, 2014 was 75%, 2015 was 78%, and 2016 was 79%. Do you see a trend? We do! Every year, the state improves and improves, so soon, they won't be on the list at all. Fun fact: Harry Connick Jr. called Louisiana home! (Image via Pinterest) First of all, we went to congratulate Georgia on being able to achieve a graduation rate of 81.6%. It's less than 88% (which is the national average), but we're looking at previous years, and wow! In the 2010-2011 school year, its graduation rate was 67% surprisingly low. That's so awful that it was literally the worst graduation rate of the year (excluding D.C.). With a little hard work and determination, they managed to get their rates up to 81.6%. Good numbers continue to advance as the Georgia Department of Education reported that the rate is 82% by 2019. That's all the time! Fun fact: Jeff Foxworthy came from Georgia! (Image via Pinterest) Missouri is strange. Its graduation range is currently 89.2%, which is certainly above the national average. In fact, Missouri has consistently ranked above the national average by at least a couple of points each year. However, something is lurking underneath. Missouri shouldn't pat himself on the back yet. NPR found that the state does not require students to take Algebra II to graduate. Besides, he doesn't have a college diploma and ready for his career. We can't help but wonder what the statistics would be if they made students take Algebra II. Fun fact: Brad Pitt is from Missouri! (Image via Pinterest) Arkansas has done a good job of staying above the curve when it comes to high school graduation rates. They've been above the national rate since 2010, and that trend isn't going anywhere. The state places a lot of emphasis on school. For the past four years, Arkansas has been bouncing between 89% and 87%, this year 89.2%. As long as the state continues to put education first, they can reach the top five instead of a long time. However, it would also not be difficult for them to slide below the top 10. Fun fact: Bill Bill he's from Arkansas! (Image via Pinterest) Wisconsin has been making an active effort to improve its high school graduation rates, and is starting to pay off. In the last five years, there has been a 1.6% increase. Now, it's all the way up to 89.7%. That's pretty remarkable! The Associated Press also found that there were improvements in small groups of students. One of the biggest gains is that English learners recorded a 4.5% increase over the previous year and a total of 12.4% over the past five years. Fun fact: Chris Noth called Wisconsin home! (Image via Pinterest) The Tennessee Board of Education was proud to admit last year that the graduation rate for the 2018-2019 school year is 89.7%. That's half a percentage point higher than the previous year, and the highest graduation rate recorded for the state! Overall, that's a total of 183 additional students who completed high school. Tennessee achieved this by having a number of schools with a 100% graduation rate, including the Huntingdon, South Carroll, Bradford, and Oneida school districts. In the past five years, Tennessee has never fallen below a high school graduation rate of 86%. Fun fact: Reese Witherspoon came from Tennessee! (Image via Pinterest) At first, Alabama struggled to reach the national graduation rate, being on average 5% lower. However, the graduation rate increased much faster than statistics across the United States. The state proudly passed to the nation in the 2013 school year, and has not yet welded that record. Alabama's graduation rate is now an impressive 90%. The Alabama State Board of Education had a goal of reaching 90% by 2020, but they managed to overcome it for two years. Alabama also strictly measures college and career readiness, unlike some other states. Fun fact: Courtney Cox is from Alabama! (Image via Pinterest) As time goes on, Texas students have begun graduating in a higher number. During the fall of 2016, the graduation rate was 89.1%, which is quite good (and certainly above the national average). If you skip the fall of 2019, that number jumps to 92.3%! That's super high! Since this percentage contains the extended rates of four, five, six and seven years, the national registration is slightly lower. This report only takes into account four-year graduation rates, so Texas reached 90%. That's still pretty good, though. Fun fact: Matthew McConaughey is from Texas! (Image via Pinterest) Over the past two years, West Virginia has managed to maintain the graduation rate by about 90%, landing in for the 2018 school year. That's also more than the previous year, which only managed to get 89.40%, according to the West Virginia Board of Education. According to the WV Board of Education, West Virginia is one of the rare exceptions where the five-year graduation rate (90.7%) is lower than the four-year rate (91.4%). Como Como the numbers continue, we wouldn't be surprised to see the state break its 90% streak and get into 91% (or higher). Fun fact: Jennifer Garner called West Virginia home! (Image via Pinterest) The Press of Atlantic City was pleased to report in 2017 that the number of high school graduates has continued to grow year after year for six consecutive years. We are delighted to say that the trend has continued to go to the point where they had a graduation rate of 90.9% in 2019. If you include five-year graduation students, it's even higher! They reach a graduation rate of 92.5%, according to the New Jersey Board of Education. Many districts even reached a rate of 100% when they included five-year-olds. Fun fact: Tom Cruise comes from New Jersey! (Image via Facebook) Kentucky is another state that has not reported its high school graduation rates for each year to the Common Core Data project. It began in 2012 when the rate was 86%, which was higher than the national average at the time. In fact, they have been above the national average since they began reporting. Today, that graduation rate is all the way up to 91.3%. There are certainly some schools that need a lot of work and are lowering the score, but the state has done a great job educating students. Some claim that students try harder, while others believe it is a change in leadership. Fun fact: George Clooney came from Kentucky! (Image via Pinterest) Iowa is the best state in the nation when it comes to high school graduation statistics. Students in the state have proven to be some of the smartest, as their rates have gone further each year over the past half of the decade. This isn't the first time Iowa has been the best dog. They have managed to get 91.4% of students to graduate from high school. The Iowa Department of Education also reported data for the 2019 school year, and the rate is rising! It is now 91.6% for four-year graduates. If you look at five-year graduates, you put up to 93.5%. Iowa is picking up some smart cookies. Fun fact: Ashton Kutcher is from Iowa! (Image via Pinterest) Author Alot Education Team last updated: August 28, 2020 2020
