## **Carnegie learning geometry volume 1 answer key**

Submitted By: Bookshare Staff Usage Restrictions: This is a copyrighted book. As educators, we're motivated to give all students a chance to succeed, but like anything else, it's hard to fully understand something until you experience it yourself. Having low vision learners in your class for the first time can be interesting and a little daunting. What ingredients will they need? How will they move about classrooms independently and safely? How can you get them involved and positive through their struggles? How can you help them focus on and celebrate their success when times are tough? At Carnegie Learning, we know that having visually impaired students can present certain instructional challenges, and we also know that classroom teachers have the opportunity to make a big and long-term impact on students' attitudes toward education, and by extension, in the future, and we are committed to supporting you by providing accessible materials for all students. We want to support you by helping you secure accessible classroom materials. For us, this means making our files available in a format that allows the creation of the materials your students need in the classroom. Making Textbooks Accessible via NIMAC What is NIMAC? The National Instructional Materials Access Center—NIMAC—was created by IDEA in 2004. It is a federally funded, searchable, and online repository of online files from K-12 printed textbooks in XML-based NIMAS format. NIMAS source files can be used to create special accessible formats (i.e., Braille, audio, digital, large print, etc.) from print instructional materials. Carnegie Learning and NIMAC Carnegie Learning are committed to providing accessible materials to all students and have an in-depth catalog of CL courses available in the NIMAC repository. We work with vendors to create NIMAS format files, which we upload on the NIMAC website. After NIMAC confirms that the uploaded file is correct and complete, it is available for download. can schools get files? Once our files have been successfully uploaded on NIMAC, it is up to the state to continue the process. Most states partner with organizations that produce accessible formats for student students have different printing needs. Teachers or other staff members from U.S. institutions can download NIMAS books for eligible students once they are secured by a partner. Partner Partners may include official national third-party entities (such as Recording for the Visually Impaired & Dyslexics, American Printing House for the Blind, Bookshare.org, and Talking Tapes), regional or state conversion organizations (such as Texas Region IV ESC Braille Services, California Department of Education Clearinghouse for Specialized Media and Technology, Kentucky Accessible Materials Consortium, and other state instructional materials resource centers), developers of software and file conversion services, and accessible media manufacturers s (uch as Braille transcribers). Who qualifies? K-12 students with IPs are eligible for accounts with country partners. What to do if you have students with different printing needs. If you receive a notification that you will have students with different print needs in your class, the first step is to contact the school district office to request modified materials for the student. In most cases, school district offices should take it from here, though if they haven't had students who needed these materials in the past, there may not be established protocols that are familiar to anyone. The following are typical pathways for securing materials for students. Districts should contact their NIMAC partners directly, or transfer information to the state education department's NIMAC Coordinator, who will request that the material be added to nimac's partner repository so that the material can be accessed by a teacher or staff member designated for local printing. Online partner resources Most partners have different online platforms and products for student use. For example, Bookshare.org has a Bookshelves, which is a repository where teachers can assign titles to students, and students can download and read books on the screen. Many organizations have web readers, allowing students to read books online and take advantage of Google Chrome accessibility features. Student access to these tools will require districts to create individual accounts for students with their partner organizations. Additional information to help your low vision learners With greater availability of writing tools, educators often choose to create their own additional material to support the classroom curriculum. Most of these writing tools include accessibility options, but sorting through the requirements can be daunting. This website filters the requirements and offers useful ideas for making self-made material accessible to all students. If you want to know about accessibility strategies for your low vision you here is a good place to start. If you want more ideas on how to create your physical space to accommodate low vision learners, this is a great resource. This is a remarkable perspective on visual impairment and its lesser-known effects on learning. Here's a great PDF of Effective Classroom Adaptation for Visually Impaired Students 20Classroom%20Adaptations\_CEC\_2001.pdf Bookshare.org is a great place to explore with your low-sighted students. There is a library of books accessible on various platforms waiting to be explored! Finding your textbook on NIMAC you can search for NIMAC on to find out if the material you need has been created and uploaded. If you're looking for NIMAC and don't find the CL product you need, contact carnegie's Learning Product Management team ProductManagementTeam@carnegielearning.com. This can be about a month from notifications to successful NIMAC uploads from our files (this is a process), so the more advanced notifications we have, the better. We look forward to helping you make your student year with your low vision a great success!
