Payne pf4m installation manual

AHRI Certification Manual Installation Service Manual Specifications Warranty Information Wiring Diagram FB4, FE4, FF1E, FH4, FV4, FX4, PF4, FFM Residential Collection Units Service Collection Units and FB4 Maintenance Instructions, FE4, FF1E, FH4, FV4, FX4, PF4, FFM Residential Fan Collection Units service and user information manual maintenance instructions for operation and maintenance of your new residential heat pump to identify safety information. This is safety alert icon guides, be alert to the potential for personal injury. Stigmatize the words of the signal danger, warning and caution. These words are used with the safety alert icon. Danger identifies the most serious dangers that will result in serious bodily injury or death. A warning symbolizes dangers that can cause personal injury or death. An alert is used to identify unsafe practices that can cause minor personal injury or damage to the product and property. Note It is used to mark suggestions that will result in improved installation, reliability, or operation. ! CAUTION: Electric shock, fire, explosion, risk of personal injury Improper installation, adaptation, modification, service, maintenance or use may result in personal injury, death and/or property damage. Consult an authorized installer, service agency or distributor for information or assistance. The approved installer or agency must use manufacturer-approved kits or accessories when modifying this product. ! Caution: Electrocutation, single action and safety risk of acting as a result of this warning may result in damage, death and/or property. Read and follow all instructions and warnings, including labels sent to or connected to the unit before the operation. Important Facts To better protect your investment and prevent unnecessary service calls, know the following: • Do not activate your heat pump system without a properly installed clean air filter. Plan to check the filter periodically. A clogged air filter will increase operating costs and shorten unit life. • Do not block supply and repeating air. Curtains, furniture and toys are some of the common items in a blocking grill. Limited airflow limits the efficiency and lifespan of the unit. • The external unit must have unlimited airflow. Don't cover the unit, lean on it with anything, or stand on it. Do not allow grass clippings, leaves or other debris to accumulate around or on top of the unit. Maintain 12-in. Minimal classification between the high grass exterior unit, vines, shrubs, etc. • Your multifunctional indoor thermostat is the control center for your heat pump system. You need to know his proper action. Attempting to control the system by other means - for example, replacing the power supply Action and shut down - may damage the unit. • During heating, increasing the thermostat to more than 2 degrees may cause complementary heaters to be activated to provide the thermostat. Unnecessary use of complementary heat reduces potential energy savings. • You may find that you can maintain greater personal comfort by running the fan continuously. Air pockets can be created due to the structure of the house, the location of the registers, etc. These air pockets may be too cool or warm for your liking. Continuous fan action minimizes all temperature differences. Also, systems equipped with electronic air cleaners and/or humidifiers offer the added benefits of continuous cleaning of the air throughout the year, and humidity during the winter season. • Your heat pump will remove the moisture from the house during the cooling season. After a few minutes of operation, you should be able to see water dripping from drainage processing of indoor cooling gozle. Check this occasionally to make sure the drainage system isn't cessated. Of course, don't expect to see much drainage if you live in a very dry environment. Note to installer: This guide must be left with the equipment user. User Guide . When you see this icon in the unit and in the instructions or ! Relax and feel comfortable knowing that your fan coil has been custom-fitted to your home and heat pump or air conditioning. It is designed to provide the perfect amount of airflow for even temperatures and a possible SEER-rated boost, or cooling efficiency, in some systems. For time-long performance, quiet operation, and carefree comfort, this is the model for you. Multi-speed fan blower that can quietly provide even more levels of temperature control efficiency optimized thermostatic expansion valve (TXV) corrosion resistant to any filter aluminum coil can be washed filter completely insulated cabinet completely insulated wireless drainage ramp drain design helps reduce mold and bacteria accumulation 10 years smooth Limited Warranty * Ther Expansion ValveMostatic (TXV) Sturdy Galvanized Steel Cabinet Compatible With Thermostat: Two-Step Heat / One Cool Non-Ozone Draining R-410A Cooling Capacity: 1.5-5 Tons * Timely Registration Required for 10 Years Parts Limited Warranty. Limited warranty period is 5 years if not registered within 90 days of installation. Jurisdictions where liability benefits cannot be conditioned on registration will receive the registered limited warranty period. Please refer to warranty confirmation for additional details and restrictions. Californians Please See Proposition 65 65
