If you find inaccuracies in our frequently asked questions, please let us know using our contact form. My vacuum cleaner hose is clogged, what can I do? Checked Disconnect the hose and look through it to determine if it is actually clogged. In this case, you can take a long object, for example, Broomstick, and carefully push it through the hose. This will usually remove all objects that clog the hose. If this did not work, contact the manufacturer. It was useful (1085) My vacuum cleaner power cord does not turn back into the device, what can I do? Checked The wire may contain rotation or folding. Fold the cord completely and unscrew it back into the device under the direction of the hands. If this does not resolve the problem, the cord-reswing mechanism may be damaged. In this case, contact the manufacturer or repair service. It was useful (175) What size dust bag is there? Checked There are two sizes to consider. The first is the size of a plate with the entrance of the bag. This determines whether the dustbag is suitable for a particular vacuum cleaner. Then there is the size of the bag. This is usually indicated in liters and determines how much dust bag can hold. It was helpful (149) My vacuum cleaner makes whistling noise, what can I do? Checked This problem is often caused by a complete dustbag or filter or when there is an outlet that allows the air to enter the hose. Check the dustbag and filter and replace if necessary. Check the hose for holes or bad connections. If this does not resolve the problem, contact the manufacturer. It was useful (129) The vacuum cleaner shuts down while I use it, why is it? The tested majority of Dyson vacuum cleaners have a safety system that disables it in case of overheating. This was due to a dirty filter or blockage. Allow the vacuum cleaner to cool for at least one hour, then clean the filter and remove any possible blockage. It was useful (103) What setting should I use on the head of the vacuum cleaner brush? Almost all vacuum cleaners have a head with an adjustable brush. Use a brush for hard surfaces to avoid scratches and damage. Turn off the carpet and mat brush. It was useful (99) How to remove dust and hair from the head of the vacuum cleaner brush? Checked Removal of dust and hair from the head of the vacuum cleaner brush is carried out manually. If this is not as desired, it is possible to use a small comb to remove the remaining dirt. It was helpful (80) Can I use a paper dust bag more than once? Checked This is not recommended. The pairs of bag wat will be saturated, resulting in loss of suction and possibly damage to the engine. It was useful (76) What is HEPA? Tested HEPA means high efficiency particulate air. Many vacuum cleaners have a HEPA filter. The HEPA filter will stop at least 85% and not more than 99.999995% of all particles of 0,3 micrometer (µm) or more. It was useful (16) Can I use an ordinary vacuum cleaner for ash sucking? Tested No, it's absolutely impossible. Ash, which looks cool, can still be warm or even hot inside. The usual vacuum cleaner is not designed for this purpose and can cause a fire. In addition, filters for conventional vacuum cleaners are not always suitable for maintaining very small particles, such as ash. It can then reach the vacuum cleaner engine and cause damage.
