Gunship battle hack game

by Adam PashRecently Apple announced that you can buy video games for your 5G Video iPod for 5 dollars per pop. Cool, isn't it? In addition to Scads of gadget-related announcements, the latest version of iTunes 7 is demoed at [Read more](#)But what if you don't own a video iPod? What if you get stuck in the world of obsolescence in front of the video? Worse still, what if you don't have 5 dollars? The new games for sale on the iTunes Store aren't for you, and that's not quite as cool. Fortunately, you can still play video games like Texas Hold 'Em, Tetris and Bejeweled (all for sale on iTunes Store) on pretty much any iPod with a little virtual elbow grease for free. Here's how iPodLinux and RockboxTwo non-Apple tools you can play games on your iPod: iPodLinux and Rockbox, both of which are completely free and open source. I used both and was impressed, but today we stick to iPodLinux as it is easier to install. I will describe the process from a Windows user's perspective, but iPodLinux installers are also available for Mac OS X and Linux. Always running games on iPodLinux is a pretty simple 3-step process:Install iPodLinuxInstall some gamesPlay your gamesIt's not exactly news that you can play games on an iPod with iPodLinux, but you can't know how easy the process can be. In its most recent feature Get the most out of an old iPod, my co-editor Adam mentioned installing Linux Read moreStep one: Install iPodLinux on your iPodNOTE: Although I had no problems with iPodLinux, you might be able to run into a snag that would require you to restore the firmware of your iPod, which could mean you're losing all the music currently on your iPod. So back up the music and files of your iPod before proceeding. First, download the iPodLinux installer and extract the content to a folder on your computer. Do not use a temporary folder as you will use the installer more than once, and here it will back up your current firmware and settings for easy uninstall if you decide to get rid of iPodLinux. The iPodLinux wiki currently claims that the installer doesn't work properly if you updated your iPod firmware with the new iTunes 7, but I'm running the latest firmware on my 4G iPod and have no problem. Your mileage may vary, but if you have a problem with your iTunes 7-upgraded iPod, you can always downgrade your firmware with iPod Updater 2006-06-28 to install iPodLinux (since iTunes 7 is a bit messy, scads from downgraded anyway). If you are ready to try it, run the installer. Again, the iPodLinux people make a point to tell you that many iPods are not officially supported, but you will find that for most purposes (at least for the games we will install), pretty much every iPod should work well. The installation is simple. Connect your iPod with hard drive mode enabled run the installer while maintaining the default settings. You may be told at some point (at least I was) that there are some dependency errors, but just click OK and lead ahead. When you go to the bootloader options, you have the choice: you can automatically boot your iPod to Apple's default firmware (hold the Rewind/Back button while booting will load iPodLinux), boot them by default iPodLinux (keep Rewind booting Apple firmware), or select the iPodLoader2, which gives you a boot manager interface where you can choose what you want to download each time you want to charge. In most cases, I would suggest loading the iPod firmware by default, although I am currently using iPodLoader2 (top picture) without any problems. When the installation is complete, go to iTunes and eject your iPod. You may need to plug your iPod into the power outlet to complete the installation, but the next time your iPod starts, you should be able to boot into iPodLinux. Step Two: Download some gamesNow that your iPod is dual booting Linux and the default Apple firmware, it's time to run these games. Connect your iPod to your computer, launch your iPod into Apple firmware, and run the iPodLinux installer again. This time, the installer will recognize that you have already installed iPodLinux. Select Update My existing installation and click Next. The installer should take you to a page of packages that you can install on your iPod. Here you can select your games. The installer gets a little buggy for me at this point, but you can easily bypass it. When the package list is finished with the download, I don't always have the option to go to the next page and view the packages. However, if I go back and then continue to hit, I will be taken to the package list. (I'm just a man, so this can happen to you or not.) Once you make it into the package installation tree, you can choose from a long list of cool games and other modules for your iPod. [1] Select the games and modules you want to install, click next and wait for the installation to complete. Step three: Play your gamesOnce the installer is finished, you can eject your iPod and boot it back into iPodLinux. Once the interface is loaded, go to Extras - > Games (just like you on Apple's firmware) and you should see all the games you have installed. Here's a sneak peek at all the games I'm playing on my 4G iPod have:BlueCube (Tetris)DuckHunt (It's surprisingly playable on an iPod, but chances are that the dog will laugh at you more than normal)Deal (Deal or No Deal game)Gem (Bejeweled)PodPoker (Texas Hold 'Em)TuxChess (Chess)Keep in mind that some of these games work and look a little better than others, but all the games I mentioned , work very well on my 4G iPod. And they are all free. As I said, iPodLinux is not the only way to play games on your iPod; in fact, in the past I had a lot of fun playing Doom with Rockbox (in my experience, experience, Doom in Rockbox much easier to set up than iPodLinux). If you feel particularly ambitious, you can set up a triple boot from Rockbox, iPodLinux and the standard Apple firmware with iPodLoader2. Whatever you choose, it's pretty easy to get a bunch of fun games on your iPod for absolutely free. If someone out there has tried iPodLinux or Rockbox and you want to weigh in, or you have any questions about this process, redirect your iPod game-lovin' energy to the handy comments box below. Finally, if you're looking for more ways to have fun with your iPod, check out my other iPod-focused features. Click to seeAdam Pash is an associate editor for life hackers who doesn't have a 5G video iPod and wouldn't buy games for it even if he did. Its special hack attack appears every Tuesday on Lifehacker. Subscribe to the Hack Attack RSS feed to get new installments in your newsreader. FOOTNOTES:[1] The package list is also the place to remove annoying modules. For example, the MPD module caused iPodLinux to freeze during boot, but removing it by the installer takes care of this problem. Also, if you're trying a game you don't like and want to remove it, just come back to the package installation tree and disable it. [back up] If you're playing video games like World of Warcraft, Diablo, and Starcraft, you should change your Battle.Net passwords now – Blizzard, the manufacturer of those games, has a security breach. The 2012 hacking spree continues, according to Last.fm, LinkedIn, and a slew of other companies that violated their servers and stole data. You know the drill: It's time to change your Battle.Net passwords and any other passwords similar to those. Yesterday it was LinkedIn and eHarmony accounts compromised; today it is Last.fm. The music... Read moreIf you've followed our security advice so far, use strong, different passwords for each account by using a password manager like LastPass to keep them all straight, and changing your Blizzard password is all you need to do. However, if you use the same password everywhere, you must change it everywhere so that hackers do not have access to these accounts. We've put together a guide to monitoring and updating your passwords, so now would be a great time to do so, not to mention some of the other security procedures we recommend in the wake of this week's Amazon and Apple compromise. We have always argued that the most secure password is one that you don't even and is basically... Read moreBlizzard says no signs of financial data have been compromised, and what was stolen is probably not enough to get someone into your account – it mainly contained email addresses, the answer to security questions and mobile authenticators. However, it is better to be safe than to regret it. Click on the link to read more. Important Security Update | Blizzard Auto Auto is a newer genre and is gaining momentum quickly. I saw mass successes on the PC with games like Dota Auto Chess, Teamfight Tactics and others. The premise of these games is pretty simple. You burst characters on the board every turn and these characters fight with the enemy characters. The characters fight on their own without further input from you. That's why they call it car chess or car fight. If you win, the enemy takes damage, and if you lose, you take damage. The different characters work together with synergistic abilities to give you an advantage in battle. Each game has its own variant of this core mechanics, but they all work roughly the same way. This list is young similar to the genre itself and we promise to improve it with every update. Here are the best car chess games and car fighting games for Android! Chess RushClash RoyaleDota UnderlordsHearthstoneTeamfight Tactics Arena AllstarsPrice: Free to playArena Allstars is a pretty decent car fighter. Players have access to a number of different cards, characters and different game modes. It offers games with up to seven players along with a co-op mode if you want to play with friends or strangers. It also has a campaign, a practice mode, tournaments and nice little things like emotes. The game seems to tick all the boxes and most players seem happy enough. Most complaints deal with either connection problems or minor bugs with AI opponents that don't take the damage they should. However, we assume that these are all temporary issues. The game is free to play with an optional combat pass if you want to unlock premium content. Arena of Evolution: Red TidesPrice: Free to playArena of Evolution: Red Tides is another car chess game that seems to hit most of the right notes. It has over 50 pieces to collect and use for your team. In addition, players get eight players free for all PvP and fairly standard auto chess mechanics. The game allows you to send and receive heroes to other players and has global servers for better or worse. Many of the game's complaints stem from Internet connectivity issues. Apart from that, however, the experience is solid all around. The developers also intend to add cross-play between PC and mobile phone in a future update, so check that if it interests you. Auto Chess by Dragonest GamesPrice: Free to playAuto Chess by Dragonest Games has a lame name, but it's actually a solid game. It was one of the first wave of car chess games on the phone. It features seven-player free-for-all battles, Esports League and, if you are well relegated in the Esports League, actual cash prizes. Luckily, the game is actually quite easy to learn with one of the friendlier users we've seen in a car chess game. We feel that this is great for beginners of the genre and the difficulty is only scaled up from there when you are facing more and more competent opponents. Seine Seine Error is the finicky cloud storage function. Be especially careful if you intend to uninstall and reinstall or buy a new phone because many people have lost their stored data. Auto Chess LegendsPrice: Free to playAuto Chess Legends is another competent car fighter. The game offers 15-minute games (maximum), over 50 heroes to play, a variety of game modes and many special events to keep things fresh. This felt like one of the simpler car chess games on the phone and it's another one that we recommend to new players in the genre. Despite its simplicity, however, there are shortcomings. You can buy heroes and that introduces a potential pay-to-win mechanism, even though we haven't noticed anything bad in our tests. This one has the potential to be big or bad and it seems that the developers haven't quite made their choice yet. It's a fun game in case it's in the foreground. Badland BrawlPrice: Free to playBadland Brawl is probably the easiest car fighter on the list. It uses a 2D, side-scroller card compared to the traditional checkerboard style setup. Thus, this is an excellent game for beginners of the genre. The core premise, however, is the same: You drop characters on the board and they fight with your opponent's characters. The winner is the last standing. It has a bit of a gacha element, but there's nothing too serious. In addition, you can watch other people play the game if you don't feel like it. We can catch some Flak for this selection, but we think it's a good starter auto battler for people new in the genre. Chess RushPrice: Free to playChess Rush is another decent car fighter with all common core elements. You burst characters, synergize them, and you beat your opponents if you outwit them. The game has more than 50 characters along with different game modes, including two against two, four against four and eight players free for all. It also includes a turbo mode with games that last about ten minutes. It hits almost all the right marks and that makes sense. This is a Tencent game, developer of Arena of Valor and PUBG Mobile. Apart from some connectivity issues, most people seem to enjoy the game and it's nice to see bigger developers of mobile games in the genre. Clash RoyalePrice: Free to playClash Royale is the mainstream option for a car fighter. It is most of the same elements as other games in the genre. You play characters on one board, they attack the other player, and the last stander wins. However, this is quite different in the execution and has many game elements Supercell's other hit game, Clash of Clans. In addition, the game is a one-on-one duel, with most car chess games larger for all modes. We would understand if you don't consider this to be a pure auto fighter experience, but it meets all qualifications, even if it's a bit closer to a deck-building game. Dota Dota FreeDota Underlords is the most famous name in car chess. The whole genre was created by a Dota 2 mod. The genre started from there and Dota Underlords is the mobile version of the mod. It's your standard car chess game so you should know how it works now. You get heroes, you send them down, you make synergies and try to beat your opponents. The game also includes an offline mode. It had a character rotation, but instead it now has cross-play with Steam, a very reasonable trade-off. It is also available in the only completely free car chess game on the list. It's not perfect, but it's solid. HearthstonePrice: Free to playHearthstone is another game that may not fit right here, but it's still a auto-battler and it belongs on a list like this. It is one of the most famous deck-building car-battlers on any platform and most people know how it works. You build a deck, start a duel, drop your cards and fight. The last one who stands wins. The game includes a few different game modes, cross-platform game with PC, and it is a pretty mature game. It's not quite the same as most others on the list, but it's close enough in most cases. Teamfight TacticsPrice: Free to playTeamfight Tactics is a big name in the auto chess and auto-battler genre. It is from Riot Games, developer of League of Legends. The game features a rotating pool of League of Legends Champions. Players set them up in the game and update them to try to win. The game has enough randomness to prevent real bumps, but it's still skill-based enough to be entertaining for hardcore players. The learning curve is a bit steep, but the mechanics are solid and the game is actually quite fun. If we have missed any great car chess games or car fight games for Android, tell us about it in the comments! You can also click here to see our latest Android app and playlists! Lists!
