Jbl everest elite 700 how to pair

If the headset is off, press and hold the ON/OFF button for about 7 seconds on Everest ELITE models for 16 seconds. (ELITE also changes to 7 seconds from 0.5.6 software). Bluetooth memory is now deleted and new pairings may be created. Elite headphones allow pairing with only one source device at a time. If you do not want to perform the full restore described above, you can use the following method. Without resetting, ELITE tries to re-pair the last source when it is turned on. If the last source is not detected, perhaps because you want to use a different source device, turn elite off and on again to make sure that the source device you last used is no longer turned on. Thus, ELITE will not be able to see the old source and will look for a new one. Now ELITE searches for the last paired source again, and since it can't find it after a few seconds, it switches back to be open to pairing with a new source. To indicate this, the LED flashes red/blue. Everest BT models allow pairing with two source devices at the same time. If you have used both source pairings and want to pair with a third source, please perform the reset as described above (hold the ON/OFF button with Everest OFF for about 7 seconds). You can now re-pair two source devices. Marca JBL.
