Macquarie, Ethan... Macquarie and Simon have developed an excellent modern physical chemistry course that should inspire us to revisit our curriculum. - Chemical Education Magazine is a wonderful book, to be greatly appreciated and valued by generations of future students. Congratulations to the authors on a well-executed task. All of us who work to teach dreaded P. Chem. Of course are in your debt. - Richard Zar, Stanford University McQuarrie and Simon approach physical chemistry in a different way than most other books. This approach is pedagogically pleasing, because it builds physical chemistry from the considerations of atoms to systems containing many molecules. - The selection is beautifully produced, with clear diagrams and nice touches, such as short biographies of scientists that appear between the seasons... (Macquarie and Simon) set high standards and many of us, as teachers and professionals in physical chemistry, will find inspiration in, and have our aspirations raised before, this text. - Times top in the quantum university course here at Princeton, we use your physical chemistry book, which many of us affectionately call big red. I don't think most people expect much from a physical chemistry book, except maybe it's confusing. Your book, however, found it to be truly fascinating. It is both an exceptionally comprehensive and clear presentation of the concepts of physical chemistry. I have friends in the physics department who survived their very strict quantitative courses by relying on your book because they couldn't understand the one used in the physics class. - Benjamin Goldstein, a chemistry major at Princeton University's Real Double Thumb! Throughout my entire university studies, both thermal motor and interaction were conducted in a very classical way. While most courses are advanced, thermal. The reaction movement, conducted here at CMU, is mainly dealing with all kinds of microscopic phenomena. Your book has served as a very good platform to link my previous experiences with my current study. - Lim Jet Kang, a graduate student at Carnegie Mellon University as the first modern physical chemistry book to cover quantum mechanics before thermodynamics and movements, this book provides a contemporary approach to the study of physical chemistry. By starting quantum chemistry, students will learn the basic principles on which all modern physical chemistry is built. The text includes a special set of MathChapters to review and summarize the mathematical tools required to master the subject and thermodynamics are taught simultaneously from a large and microscopic point of view. The student was able to understand how the properties of bulk materials are related to the properties of individual constituent molecules. This new text contains a variety of recent research topics in physical chemistry, as well as hundreds of problems and examples that have been worked on. Student Solutions Manuals by Heather Cox brings back all the problems ending the chapter and provides detailed solutions. The equations and art of the text is available for the adoption of professors for download in lecture segments. New for 2015, online home companion is available from WebAssign. About authors: As the author of historical chemistry books and textbooks, Donald Macquarie's name is synonymous with excellence in chemical education. From his classic text on statistical mechanics to his last first tour of physical chemistry, McQuarrie's best-selling textbooks are highly praised by the chemistry community. Macquarie holds his Ph.D. from the University of Oregon and is an emeritus professor from the Department of Chemistry at the University of California, Davis. John D. Simon became George B. Geller's first professor of chemistry at Duke University in 1998. He is currently head of Duke's chemistry department and a faculty member in biochemistry, ophthalmology departments of Duke Medical Center. John graduated from Williams College in 1979 with a Bachelor of Chemistry degree and received his Ph.D. from Harvard University in 1983. After a postdoctoral fellowship with Professor Mustafa El Sayed at the University of California, Los Angeles, John enrolled in the Faculty of Chemistry at the University of California, Los Angeles in 1985. Translated into French, Italian, Japanese, Spanish and Polish.
