For a portrait, it doesn't matter too much, but it's necessary for the landscape full uniform field F2.8 F2.8 F4 F5.6 F8 F11 F16 Angles / Coins F2.8 F2.8 F4 F5.6 F8 F11 F16 2.2 Lens Falling / Chromatic Anomalies / Distortion / Flare Lens Falls Away is visible and reduces slightly, when it closes but does not disappear Distortion moderate: appears in some architectural munitions Chromatic anomalies: not shown in my tests Good flare Lightroom has a lens profile for this lens and corrects distortion and the lens automatically drops 2.2 Vignettage/chromatic anomalies/distortions/torch Vigetti appears at full aperture, they shrink slightly, but never completely disappear Distortion is moderate, but appears in architectural photographs Chromatic anomalies: none during my tests Flare resistance is good Lightroom automatically corrects distortion and this lens vigector F2.8 does not fix /irreparable F2.8 fixed/fixed No CA , Good flare/not Ac , good resistance to torch growth 100% F14 - Effects of sun stars / star effects 2.3 Bokeh / Color Rendition - Bokeh / Rendering of Bokeh Colors: bokeh ball is ok; completely round but inside present sometimes some ringsson Backround blurring: good - relatively smooth Color turn is very good Bokeh spins are good, however, they sometimes have onion slices The background blurring is good and the relatively soft rendering of colors is very good F2.8 F4.8 F2.8 Video Sigma 19mm is an easy video and give a nice little blurry background effect Sigma 19mm is nice in the video and allows some background blurring effects 4 samples from photos E 19mm F2.8 19 mm - 1-250s to f- 2.8 ISO 8 100-109 crop 100% F2.8 - very sharp/well-stung harvest 100% E 19mm F2.8 19 mm - 1-50s to f- 2.8 big 100-129 E 19mm F2.8 19 mm - 1-320s to f- 11 to ISO 100-137 E 19mm F2.8 at 19 mm - 1-320s to f- 10 to ISO 100-139 E 19mm F2.8 19 mm - 1-250s to f- 8.0 standardin ISO 100-104 E 19mm F2.8 19 mm - 1-250s to f- 8.0 standardin ISO 100-157 E 19mm F2.8 19 mm - 1-160s to f- 8.0 standardin ISO 100-158 E 19mm F2.8 19 mm - 1-125s at f 6.3 to ISO 100-132 E 19mm F2.8 at 19 mm - 1-60s to f- 10 to ISO 125-117 5 Jothopátos Sigma 19mm F2.8 DG Art on erittain hyvä linssi hintaan (180 euroa) Pieni ja kevyt , se tuottaa erinomaisia tuloksia muotokuvaussa, jossa on vähän mukavia ja hyvää kontrasti Terävyyss on erinomaisen keskellä ja sujettu F8: lle se antaa myös erittäin hyviä tuloksia katu- tai maistemakuvalle, Kauki linssin puotimiseen, vääräistymiseen, CA: hen littiyttää ongelma korjaat automaattisesti so you don't have to worry about the highly recommended I own it and keep it! Options: Sony E 20mm F2.8 (330 euros) pancake lens, but almost double the price and much less good performances Zonlai 22mm F1.8 (170 euros) : manual lens that also has a similar sharpness level, but faster opening more background blurring and more vintage colors 5 Conclusion Le Sigma 19mm F2.8 DG Art est une très bonne optique pour son prix (€180) Compacte et légère, elle produit d'excellents résultats en portraits avec une petite dose de flou d'arrière plan assez doux , des couleurs très naturelles et un bon contraste Le piqu est excellent au centre et en fermant vers F8 il donnera de très bons résultats en photographie de rue ou de paysage Tous les détails de vignettage , distorsion ou éventuelles aberrations chromatiques sont automatiquement corrigés par le profil d'objectif de Lightroom Un maître achat (je possède cet objectif et je le garde !) Options: Sony E 20mm F2.8 (330 euros) un objectif pancake, toutant du double avec de moins bonnes performances Zonlai 22mm F1.8 (€170) : un objectif Manuel une plus grande ouverture pour des flous d'arrière plan plus prononcés en portrait. Le piqu est similaire au Sigma. Les couleurs sont plus saturées et proche d'une pellicule argentique IS le Sigma 19mm F2.8 good for travel, landscape and night photography I'm going on a trip to Europe is this lens recommended? I use the Sony A6000 and currently have a series lens ANSWER: This question has not yet been answered. Reply to thread Reply with quote Complaint 1 Reply to the chain Complain Re: IS the Sigma 19mm F2.8 good travel, landscape and night photography 2 You already have a universal zoom lens . Sigma copies the focal wheel you already have (so most of the time it's easier to simply keep the lens of the series on). It's only 1/2 stops faster than the series lens at 19mm, which doesn't make a real difference in low light or field depth control . I don't think you'll find it particularly useful, although I've heard a lot of praise for it as a lens . Maybe instead consider 50mm f1.8 (which duplicates the existing focal range but gives you a clear 3 stop advantage in low light and fine field control depth . Or an 85mm lens would give you something you don't yet have with reply with a quote Reply to thread Complaint Re: IS Sigma 19mm F2.8 good for travel, landscape and night photography Very ultimately only you can decide whether 19mm corresponds to your usage. Keep in place, however, that the lens of the series has image stabilization, which can easily form a 1/2 advantage of the sigma . So you may also need a pedesterd plan to benefit. If I remember correctly, I also believe that sigma can only use the A6000's more central AF scores (I was wrong) Labe gear list Panasonic FZ1000 Nikon Coolpix P950 Fujifilm FinePix HS30EXR +5 more Reply with quote Reply to Thread Complain Re: IS the Sigma 19mm F2.8 good trip, landscape and night photography 1 Tammingby wrote: I'm going on a trip to Europe is this lens recommended? I use the Sony A6000 and currently have a series lens that I bought this lens when it was just introduced. Newer versions can be different. Benefits: Very sharp and high price-quality ratio. Light and small. Disadvantages: AF: only key AF scores well. If much slower than the original Sony lenses. No: OIS= hide the signature - No life without a camera. Reply with a quote Reply to the chain Complain Re: IS the Sigma 19mm F2.8 good for travel, landscape and night photography Ok please! If I buy 50mm or more, should I consider sigma 60mm? 2.8 version Reply with quote Reply to thread Complain Re: IS the Sigma 19mm F2.8 good for travel, landscape and night photography 1 Tammingby wrote: Ok thank you! If I buy 50mm or more, should I consider sigma 60mm? 2.8 version All these cheap Sigma lenses are a little sharper than the Sony versions. Everyone has the same pros and cons as Sony. AF issues prevented me from buying more of these Sigma lenses. But like I said, I'm not sure this problem still exists. If you frequently shoot a video, it would be better for you to serve Sony lenses. -- hide signature -No life without camera. Reply with quote Reply to thread Complain Re: IS the Sigma 19mm F2.8 good for travel, landscape and night photography 1 Tammingby wrote: I'm going on a trip to Europe is this lens recommended? I use the Sony A6000 and at the moment there is a kit lens it is complicated . + The lens is cheap, light, small and sharp . & It's going to be sharper in the corners even around F8. But it's limited to 19mm . It is not wide enough in many cases. You can crop an image that is too wide (even if you don't get a longer lens FOV), but with an image that is too narrow, there's nothing you can do . There is no stabilisation . So, you should use it fully open in low light situations, forcing you into a narrow field depth. The lens of the series is stabilized, so the advantage of Sigma sharpening and the faster lens may close aperture 1650 and use lower shutter speeds to assist stabilization. They say your speed must be 2x medium to avoid blurring handshake, but I think with an unstabilized lens any speed below 1/60s is bad with any FL . At 1650, I could take decent pictures at 19mm, but not enough . For me - to justify keeping it. For a trip to Europe, I recommend 18-135. You'll get a lot more out of it. Amamba gear list: Amamba gear list Sony Alpha NEX-6 Sony a6000 Sony E 18-55mm F3.5-5.6 OSS Sony E 55-210mm F4.5-6.3 OSS Sigma 30mm F2.8 EX DN +6 more Reply with quote Reply to thread Complain Re: IS the Sigma 19mm F2.8 good travel, landscape and night photography I had a love affair with Sigma primes. But it ended pretty quickly, I still liked 30/2.8, but primarily because it's so small and sharp. I don't use it that much. Both Sigma primes I had (the original 19 and 30) suffered from slow focus, which was very unreliable in low light, a completely useless manual focus ring combined with a focus thread that provided zero functionality in the dark, a tendency to silly skin tones with terrible orange cast in some lighting conditions and poor flare. I wouldn't get Sigma 60mm as I use this for portraits (mostly 50mm) and there are plenty of optically fine old beginnings that are cheap. In fact I prefer MF when I have time to practice. Practically every brand used to have excellent 50mm primes, I have two Minoltas and one Pentax, all of which together cost less than \$60. If you want a modern AF short tele prime, I would look for a used Sony SEL50/1.8 OSS . It's very good optically and stable. Amamba gear list: Amamba gear list Sony Alpha NEX-6 Sony a6000 Sony E 18-55mm F3.5-5.6 OSS Sigma 30mm F2.8 EX DN +6 more Reply with quote Reply to thread Complain Re: IS the Sigma 19mm F2.8 good for travel, landscape and night photography Dutch Newchurch wrote: You already have a universal series zoom lens . Maybe instead consider 50mm f1.8 (which duplicates the existing focal wheel but gives a clear 3 stop advantage in low light and fine field control depth . Or an 85mm lens would give you something you don't yet have, yet I disagree . Sigma 19mm is sharper, especially in the corners. If you want to crop or print large ones, it's much better. It stops faster at 19mm of stagnant . I've been using it to photograph astrophotography, and it's going to be fine there, too. Reply with quote Reply to thread Complain Re: IS the Sigma 19mm F2.8 good for travel, landscape and night photography Tammingby wrote: Ok thank you! If I buy 50mm or more, should I consider sigma 60mm? The 2.8 version of Sigma is sharper and slightly more telephoto. It can be the sharpest APS-C fastening lens at any price. But Sony is stable and stops brighter. It really depends on which of the features above are more important to you. Reply with quote Reply to thread Complain Re: IS the Sigma 19mm F2.8 good for travel, landscape and night photography Amamba wrote: I had a love affair with Sigma primes, but it stopped pretty quickly. Both Sigma primes I had (the original 19 and 30) suffered from slow focus, which was very unreliable in low light, a completely useless manual focus ring combined with a focus thread that provided zero functionality in the dark, a tendency to silly skin tones with terrible orange cast in some lighting conditions and poor flare. So I still have those two original lenses, and I haven't found any real AF issues. But I'm not firing any action, so af's speed isn't critical. I haven't noticed much slower than their concentration. I've noticed how better the sharpness is compared to the 1650 series lens. For me, that's reason enough to film with them and not with a series lens that is small and stable, but optically very marginal. I haven't had any significant torc problems or color issues with those lenses. Responding with an Offer Reply to Thread Complaint Complain
