## Chapter 9 section 9.2 plate tectonics answers

Diagram or model shows the entrance of the earth, labeling all principal parts and the expected thickness of each layer. The rthadascaraby features various conditions in the temperature inside the earth and their effects for internal processes such as convection. The magnetic field of Aonyapallin and the magnetic field of time such as the early evidence for the reversals of the magnetic field as early as the 20th century to promote this theory. It was used as a basis for understanding the global geological process that they underwent to understand the method of plate tectonics and the evidence that the plates have moved and created the single field and the Fiatorisdeskarai seven important plates, their range and their path of movement, and the identification of the range types (Konorgant, Multiplechicago, or Change) define the geological process between the multiple chicago and the konorgant plate. The boundaries take place, and explain why the change is caused by the stypallan stypallan show to shape super continents and how they break the mechanism for plate movement and the terms of this connection to the geological process on the ground as well. The Snow Stone, The Mountains, Tension, and The Goutatooon. Review questions Chapter son #2 9 and 6 to 11, Chapter 10 #1 26 (#3 to leave)-(T-Chart Format for please!) B. Write a convincing argument for the Continental Creative Writing Assignment (10 GB) (letter) for continental flows which will influence the thinking of 19 century scientists. Address of the letter to the head of geological sciences at a university in Germany. Be sure to support the arguments with evidence (the contiuis of the container and the north, the awaadankphatom geosahim, palaeoklatology, and geology) that are clear and logical. C is. Ask the following additional questions (TChart)-Total 30 GB1. How will Stanospahery be made to create a concept of a container draftmemory manifest? 2GB 2. Around 200,000,000 years ago explaining the management of continents. What is the name of this super continent? 1GB 3. Outline 3 types of tectonic plate boundaries: Multiple Chicago, Change (also called strike slip) and Conorgant (or subsmoothness) zones. Enter a picture to explain each type, list the geological scale events that occur in it, and give examples of each one. Record your information in the form of table below. (9 Gigabyte) Boondarigiyulogak EventsExamples Explain the type of seismic activity in the trench. What is the Banov Zone? Add a scout (3GB) 5. Average, How Fast Moving plates? 2GB 6. Briefly explain the rock cycle in the context of plate tectonics. Explain how the Ayaha, Rasobe and Metamorefaq Rock forms process in 3 types of plate boundaries. 5GB 7. Explain that tectonic boundaries are the aerigologacally to strengthen the geographical lying areas and active and internal areas. (3GB) 8. Why are the oldest sea floor ings about 200,000,000 years of age, while some of the container seriating rock are over the age of 3,000,000,000? 2GB 9. Although most earthquakes occur in plate margins, sometimes very large earthquakes occur within the lothospherak plates. How can this be? (1GB) 10. Using the concept of asustatoc adjustment, explain what happens to the singi circle, if (a) weight is added to it, for example, on the glacier farm continents? 1GB (b) weight is for him, for example, the tension of mountains? 1GB define the following conditions in your notebook, use to create gesture cards, or The Quizlet read set. Use your words or pictures whenever possible. 1 Plate Tectonics Chapter 9 2 Section 9.2 Plate Tectonics 3 Important Questions-Objectives What is the Singi Circle? What are the 7 main plates? What are the 3 types of plate boundaries? 4 The top part of the singly circle and dependent crystal is the top part of the crystal which floats down on top of the melted rock as a strong and hard-sheet. Inflexible crystals 5 6 plates plates 7 8 types Plate boundaries Wherever two plates come together, they will form one of the three type plate ranges. Multiple Chicago boundaries Change the boundaries of the Konorgant boundary 9 plate ranges of multiple Chicago boundaries whenever two plates move away from each other. 10 plate ranges ranges of the Conoregrant whenever two plates move directly towards each other. 11 Plate ranges ranges whenever two plates move towards each other but change to neither or far. 12 Section 9.3 Works on plate boundaries 13 14 No. 15 Misc. 17 Multiple Chicago Boundaries Continental Crack 18 Multiple Chicago Boundaries Continent Darra Continental Heels are in the original of the Atlantic-like sea. 19 Conorgant's boundaries The sea continent produces 20 Mt. St. Helens volcano essays creates trench21 connoregant boundaries 22 volcanic island parentheses at sea 23 The boundary of Conorgant makes the continent 24 very long mountain boundaries. 25 Change Range Earthquake Creates 26 27 Finally Thank you for your participation! Earth Science Science. PG. 255 1. A part of the crystal (the singi field) that run as a unit. 1 inw 2. Change the boundaries of The Konnorgant, Multiplechicago, and Error. 1 inthree 3. The principles of plate tectonics. 1 inw 4. . In the boundary of The Conoorgrant, two plates move Within the range of multiple Chicago, two plates are moved separately. In changing the limits of error, two plates past each other. 1 inw 5. The flow of the continental swell, the continents are swayed by the sea floor; in the plate tectonics principle, the sea floors are an essential part of the lothosfarak plates and move along the continents. 1 Inw 253 pages 264 264
