Portland police non emergency online report

ORLANDO, FL/ACCESSWIRE/FEBRUARY 21, 2019 / Earlier this week, cannabis testing lab Digipath Inc. (DIGP) found out that the company has been identified as one of the industry's top 10 players working in the cannabis testing market worldwide alongside some of the largest and most popular brands in the industry. In a highly competitive emerging market, this is strong news for a Nevada-based operator with an emerging business model that includes expansion into Columbia and California to test cannabis and cannabis and North Carolina, Oregon and Arizona for cannabis testing. But what might have been most beneficial to Digipath is not a prestigious inclusion among industrial stalwarts. What may be most important is what independent research firm Insight Partners believes that the international cannabis testing market will expand from $1 billion in 2017 to $2.5 billion in 2025, with a compound annual growth rate of 11.9% from 2017-2025.The factor in this larger and larger part of the countries is legalizing cannabis, which in almost every case requires testing, and the expansion market is clear. It is worth noting that the report, which has assumptions about the 2025 deadline date, may not fully consider other countries or states that could decide to legalize closer to 2025 and are not part of that projection. Of course, the report most likely does not affect any possible reduction or adverse growth regulation either, but we are currently seeing little of this kind. It also ensures that widespread use of CBD can create a Malcolm Gladwell-esque tipping point and that there could be an accelerated market appetite for CBD and cannabis. Perhaps it is the Nexus report of Digipath's inclusion in the list of the industry's top 10 players in cannabis testing and a bold market growth forecast that are compelling because if Digipath can ratify that Top 10 designation with relative market share the company will certainly be worth watching. To introduce an investor in Digipath, please visit Digipath Investor Info.About Digipath, Inc. & Digipath Labs, Inc.'s Digipath, Inc. supports the cannabis industry's best practices for robust testing, data collection, education and cannabis training, and brings impartial cannabis news coverage to the cannabis industry. Digipath Labs provides pharmaceutical analysis and testing in the cannabis industry so that producers, consumers and patients know exactly what is in the cannabis they are inhaling and to help maximize their client's product quality through analysis, research, development and standardization. Markets Consulting, LLCE-mail: jamespainter@emergingmarketsllc.comWeb: www.emergingmarketsllc.comSOURCE: Emerging Markets ReportView original version at accesswire.com: strong fundamentals should boost the streaming company's share price, says Needham analyst Laura Martin. KEYWORDS This is billionaire investor Carl Icahn talked to CNBC during Monday's selloff about the potential for a big stock market crash. Another thing they have in common is always saying: It's different this time, he continued. New Year's Eve, a new addition to the stock portfolio – what could make more sense than that? The right time to buy, of course, is when the stock is priced at the bottom. Buying low and selling high may be a bit broken, but it's true, and the truth has to remain power. But the markets are up. The NASDAQ rose 43% in 2020 and the S&P 500 showed a gain of 16%. With a market environment like this, finding stocks that fall into doldrums is harder than it looks. That's where Wall Street pros can reach out. We used the TipRanks database to identify three stocks that fit the profile: a share price that has dropped more than 30% in the past 12 months, but at least with double-digit potential upside down, according to analysts. Not to mention that everyone has earned a moderate or Buy consensus rating. Esperion (ESPR)We'll start with Esperion, a company that specializes in therapy to treat elevated low-density lipoprotein levels - a major contributing factor to heart disease. The company's main product, bempedoic acid, is now available in the form of tablets under the brand names Nexletol and on February Nexlizet.In, 2020, both Nexletol and Nexlizet have been approved as ring therapies to reduce LDL-C. Bempedoic acid remains in clinical trials of its effectiveness of reducing the risk of cardiovascular disease. The trial, called CLEAR Outcomes, is a large-scale, long-term study tracking more than 14,000 patients with top-line data expected in the second half of 2022. The study covers 1,400 locations in 32 countries. Esperion's shares peaked last February, following FDA approval, but the stock has since declined. Shares are down 65% since their peak. Along with the fall in the value of shares, the company showed a drop in revenue from Q2 to Q3, with the top line collapsing from $212 million to $3.8 million. Since the Q3 report, Esperion has announced pricing in a $250 million offer of senior subordinated banknotes, at 4%, due in 2025. The proposal gives the company a boost in available capital to further work on its development pipeline and its marketing efforts for bempedoic acid. Chad Messer, covering ESPR for Needham, views the note offer as pure positive for Esperion. We believe this monetary position will be sufficient to support Esperion until 2021 and for profitability in 2022... We believe this funding should help put to rest concerns about Esperion's balance sheet. Despite a challenging launch for NEXLETOL and NEXLIZET, product growth continues in 3Q amid the LDL-C contract market. This growth trajectory speaks to the potential for rapid acceleration as conditions improve, Messer wrote. To that end Messer rates ESPR shares of Strong Buy, and its price target, at $158, suggests the stock has room for huge growth this year - up 481% from current levels. (To watch Messer's track record, click here) Overall, Esperion has 6 recent reviews on record, with a breakdown of 5 Buys and 1 Hold to give the stock a strong rating to buy from analyst consensus. The stock, trading at $27.16, have an average price target of $63.33, implying a one-year upside of 133%. (See espr stock analysis on TipRanks) Intercept Pharma (ICPT)Liver disease is a serious health threat, and Pharma Intercept focuses on developing treatments for some of the more dangerous chronic liver diseases, including nonaltoholic steatogeptitis (NASH) and primary biliary cholanitis (PBC). Interception has a research pipeline based on regulator of bile acid tracts in the soldering system. The action of FXR affects not only the metabolism of bile acid, but also the metabolism of glucose and lipids, as well as inflammation of inflammation fibrosis around the liver. The lead compound, obethyholic acid (OCA), is analogous to CDCA bile acid, and as such can play a role in FXR pathways and receptors involved in chronic liver disease. Treatment of liver disease through FXR biology has direct applications for PBC, and shows the promise of treating complications from NASH. ICPT shares dropped sharply last summer when the FDA rejected the company's application to approve OCA to treat NASH-related liver fibrosis. This delays the drug's potential entry into the lucrative market; there is no current treatment for NASH, and the first drug to win approval will have a lead in reaching a market valued at $2 billion to $5 billion in potential annual sales. The impact on stocks is still being felt and the ICPT remains at its 52-week low point. In response, in December 2020, The Intercept announced major changes to top-level governance as CEO and President Mark Pruzanski announced that it would step up from January 1 this year. His successor is Jerome Durso, the company's former CEO, who will also take up a position on the Board of Directors. Prussian will remain an adviser, and will hold the position of director on the company's board of directors.Piper Sandler analyst Yasmen Rahimi is deeply immersed in the intercept's ongoing efforts to expand OCA applications and reapply a new drug to the FDA. She sees the leadership transition as part of this effort, and writes: [We] believe that Dr. Pruzansky's commitment to transforming liver space is still strong and that he will continue to drive ICPT progress as an adviser and board member. In addition, we have had the pleasure of working closely with Jerry Durso and believe that he will transform the company and lead ICPT's success in growing the PBC market and the path to potential approval and commercial launch of the OCA into NASH . Rahimi takes a long-term bull's position on ICPT, giving the stock an Overweight rating (i.e. Buy) and an $82 price target. The figure points to an impressive 220% upside over the next 12 months. (To watch Rahimi's track record, click here) Wall Street is somewhat more divided over the drug manufacturer. ICPT's consensus rating of Moderate Purchase is based on 17 reviews, including 8 Buys and 9 Holds. The stock is priced at $25.82 and the average price target of $59.19 suggests an upside potential of 132% over the next 12 months. (See ICPT stock analysis on TipRanks) Gilead Sciences (GILD)Gilead had a year as fireworks - fast and fast down. The profit came in at 1H20, when it emerged that the company's antiviral drug remdesivir would be the main treatment for COVID-19. However, by November, despite the fact that remdesivir has been approved, the World Health Organization (WHO) will recommend against its use, and covid vaccines are now on the market made remdesyvir irrelevant was just one of Gilead's recent winds. The company is working in conjunction with the GalapagosEs (GLPG) to develop filgotinib as a treatment for rheumatoid arthritis. While the drug received EU and Japanese approval in September 2020, the FDA withheld approval, and Gilead announced in December that it was suspending U.S. efforts to develop the drug. However, Gilead retains a diverse and active research pipeline, with more than 70 study candidates at various stages of the development and approval process for a wide range of diseases and conditions, including HIV/AIDS, inflammatory and respiratory disease, cardiovascular disease and hematology/oncology. On a positive note, Gilead posted Q3 earnings above estimates, with top line revenue, of $6.58 billion, beating the forecast by 6% and growing 17% for the year. The company updated its 2020 sales guidance from $23 billion to $23.5 billion. Among the bulls is Oppenheimer analyst Hartaj Singh, who gives GILD shares an Outperform rating (i.e. Buy) and a $100 price target. Investors are on the pocket of a 69% profit if the analyst's thesis is played out. (To view Singh's track record, click here) Support your position, Singh writes: We continue to believe in our thesis (1) of the robust remdesivir/other medicines business against SARS-CoV outbreaks, (2) underlying business (HIV/oncology/HCV) growing low single digits over the next few years, (3) operating levers of greater revenue growth, and (4) 3-4% dividend yields. What does the rest of the street think? Looking at consensus disruption, the opinions of other analysts are more common. 10 Buys, 12 Holds and 1 Sell add up to moderate buy consensus. In addition, the average price target of $73.94 indicates a 25% upside potential from current levels. (See gild stock analysis on TipRanks) To find good ideas for battered stock trading at attractive valuations, visit TipRanks' Best Stocks to Buy, a recently launched tool that brings together all tipRanks equity ideas. Investors hoping for a quick bounce in the stock market after Monday's crush will be disappointed by action in the futures market this morning. The news that Haven, a public health joint venture between Amazon, will disband next month is not surprising to many public health experts. A Business DailyA-Democrat investor victory in both Georgia elections could have huge implications for tax and spending policies, a form of coronavirus recovery and a stock market outlook. The DailyApple investor business has been an American success story several times over with Mac, iPod, iPhone and others But are Apple shares to buy now? Here's what its stock charts and earnings show. It is a stock that has underperformed over the past two years but is likely to surpass in a year of renewed growth in economic activity. Here's everything you need to know about raising Social Security, the cost of Medicare premiums and pension plan limits for 2021.Lance Roberts explains why money won't soon pour into the stock market from bank and money market accounts. Workhorse Group Inc. (NASDAQ: WKHS) has booked the largest order of electric delivery vans of the last mile to date. But the order depends on workhorse being able to complete it. Pride Group Enterprises, which operates 17 commercial and rental trucks in the U.S. and Canada, ordered 6,320 delivery vans between July and 2026 - five times the backlog Workhorse has for its C-650 and C-1000 composite vans with battery. A slowed COVID outbreak at its factory in Union City, Indiana, Cincinnati Workhorse expects to build 1,800 vans this year, gradually reaching production of 200 vans a month. It built just seven vans in the third quarter, two of which were delivered to Ryder System Inc. (NYSE: R) for use in its short-term COOP rental program. Workhorse plans to begin fulfilling a deferred order from United Parcel Service (NYSE: UPS) for this year's 950 C-Series vans. It had a total backlog of about 1,100 vans at the end of the third quarter of 2020, not counting orders for 500 trucks from commercial car distributor Pritchard Cos.The Pride Group orders are subject to varying production and delivery conditions, according to a Workhorse press release on Monday. A company spokesman did not immediately return a call seeking clarification of the terms and conditions. This large order asserts our preference for first move and indicates increased interest in our last-mile delivery products, Workhorse CEO Duane Hughes said in a release. Workhorse shares were trading up 21.32, up 7.79% at 2:52 .m EST Monday. Easy lead? Workhorse may have a slight standoff in the construction of last-mile delivery vans over market start-ups Arrival and Rivian, which expects to meet orders for 100,000 electric delivery vans from Amazon (NASDAQ: AMZN) by 2024. FedEx (NYSE: FDX) is buying 100 Chanje V8100 electric vehicles and leasing another 900 from Ryder System Inc.Pride Group is moving to make all its offerings electric. He reserved 150 Tesla Semis in November. It can purchase as many as 500 of the delayed electric large-tonnage trucks. Pride is excited to establish this new partnership that will add the last mile of vehicle delivery to our existing product offering, CEO Sam Johal said. – This is one of the key steps that we over the past year towards achieving our future goal of 100% electric vehicles. Hitachi Capital America finances inventory of both Workhorse and Tesla purchases. Business Daily InvestorSin the best cybersecurity stocks are well positioned in cloud services. Against the background of Covid-19, more and more companies are instructing employees to work from home, creating new computer security problems. Keeping tax forms up to date means you need to know how the W-4 form has changed due to recent legislation. Find out what has changed and what to do. That's what could really send bitcoin prices through the roof in 2021, argues one expert. SHARES of AT&T Inc. (T) fell 26% in 2020, closing the year within 22 cents of the last price traded in December 2018. Of course, AT&A's perennial backwardness T is a special case, saddened by years of debt accumulated by poorly executed purchases that include DirecTV's disastrous 2015 acquisition. The company also overpaid for Time Warner in 2016, but that bid could eventually pay off, with hboMax's new streaming service growing at a healthy pace. If you're wondering what investment income is and how important it is for your retirement, consider the fact that most of us just don't have enough savings just to bleed the balance every month after we leave work. Instead we need income-generating investments that produce regular salaries of this kind while we are retired. (Bloomberg) - Bill Ackman's Pershing Square Capital Management reported its second straight record performance in 2020, as a bid in the early days of the pandemic helped the fund return a 70% investment. The billionaire investor said Pershing Square has a net return of 4.6% in December alone. Annual results eclipsed a 16% gain in the S&P 500, and surpassed Ackman's record in 2019 by about 58%. The back-to-back win marks an impressive return for Ackman, whose hedge fund has previously made up for three consecutive years of losses after a disastrous bid for Valeant Pharmaceuticals Ltd. and an ill-fated sales campaign at Herbalife Nutrition Ltd., among other challenges. The year marked a comeback for human hedge funds, after years of reclassification by computer quantitative strategies. Pershing Square's performance in 2020 was driven by Ackman's lucrative credit hedging introduced in the lead-up to crisis and further market sell-off. Ackman said in April that he was so concerned about the potential impact of coronavirus that he considered liquidating the entire Pershing Square portfolio before instead opting for a credit and hedge strategy. The bid paid off, returning about $2.6 billion to Pershing Square by the time it was sold in March, or about 100 times the initial investment. Ackman used the proceeds to make what he called a recovery rate on the economy, by increasing stakes in portfolio companies and reinvesting in others, including the attention starbucks Corp.Ackman later turned to its clean-checking company, Pershing Square Tontine Holdings Ltd. In July, the special-purpose acquisition company, or SPAC, surpassed $4 billion in initial public offering as well as $1 billion in liabilities from Pershing Square , and is now looking for a private company to take the public. Ackman held talks with Airbnb Inc., Stripe Inc. and others. (Adds a return to the top of human funds in the third paragraph.) The grand council gave no reason for its decision in a statement released during the Asian hours, saying only that it had advised relevant regulatory agencies on Trump's executive order signed in November as part of his administration's push to test China's growing economic strength. The about-face described by Jefferies Financial Group Inc. described investors who on Monday sold shares of Chinese telecommunications companies and bet on which shares might be delisted further. China Mobile Ltd., China Telecom Corp. and China Unicom Hong Kong Ltd. all rallied tuesday.The lack of clarity about why the NYSE reversed course left investors to speculate over whether it was simply the outcome of the exchange, initially misinterpreting the November executive order, or something with broader geopolitical implications. The episode added to a sense of confusion around the implementation of Trump's order during the waning days of his administration. Indices suppliers FTSE Russell, MSCI Inc. and S&A P Dow Jones Indices all said last month they would remove some Chinese companies from capital sensors to fulfill the order, but their lists of affected shares were sometimes markedly different. Read more: China Mobile May Dodge Index Exclusion After NYSE U-Turn Rates for both Chinese and U.S. companies. The first has long turned to America's stock market for capital and and prestige, raising at least $144 billion over more than two decades. Their American counterparts, meanwhile, are eager to avoid any escalating tensions that could curb their access to China's vast economy. Wall Street banks in particular are pouring resources into the country after gaining unprecedented scope to work there last year. The NYSE reversal was quite unexpected, said Jackson Wong, director of asset management at Amber Hill Capital Ltd. in Hong Kong. Some funds that had an obligation to offload these shares will now need to buy them back. Some investors are also beginning to appreciate in the scenario that the decision to end delisting could be the beginning of a de-escalation of tensions between China and the United States. Calls and emails to the media department of the China Securities Regulatory Commission were not immediately returned Tuesday. The CSRC responded to the NYSE's original plan by calling it a baseless and not wise move. Representatives of the U.S. Treasury Department, the U.S. Securities and Exchange Commission and the Financial Industry Regulatory Authority did not immediately respond to requests for comment. It's unclear whether the NYSE reversal will have any impact on index providers who help guide investments worth trillions of dollars. The FTSE Russell declined to comment on Tuesday, while MSCI and S&B P Dow Jones could not immediately be reached. Bloomberg LP, the parent of Bloomberg News, also compiles stock indexes and bond indices. In separate statements, China Mobile, China Telecom and Unicom said they would continue to monitor developments. China Mobile, the largest of the three, jumped 5.1% in Hong Kong on Tuesday. Shares of NYSE rose 10% at 7:55 outside New York.m while U.S. shares of China Unicom rose 16%. Chinese Foreign Ministry spokeswoman Hua Chunying said Tuesday that Beijing hopes the United States will respect the market and the rule of law, and do things conducing standing up for order in global financial markets. The NYSE's initial proposal, announced on New Year's Eve, marked the first time the U.S. stock exchange has unveiled plans to remove Chinese companies as a result of direct rising geopolitical tensions between the two superpowers. In his executive order, Trump said the three telcos were among those directly supporting the Chinese military, intelligence and security apparatuses and assisting in their development and modernization. Developments have unfolded in the last few weeks of the Trump administration, which has for years opposed China for what the U.S. president calls unfair trade practices. Trump has imposed tariffs on imports from China and has conducted an aggressive campaign against Chinese technology firms like Huawei Technologies Co., measures that have often forked retaliation from Beijing. In a December article, Secretary of State Michael discussed how U.S. investors finance The People's Republic of China's Malignan companies, whose shares are included in the main indices. The NYSE has faced criticism from some market watchers over how it handled the situation. Travis Lundy, an Asian markets veteran and independent analyst who publishes on the Smartkarma platform, said in a tweet that the U-turn reflects the ineptitimacy of the rank of the exchange and weak leadership from the Treasury Department. They had seven weeks to talk to the Treasury about it, Lundy said, adding that the department had also published lengthy additional frequently asked questions. Execute a decision and then go back four days later - it's just amazing. Even though the impact on China Mobile and two of its peers has always been minimal given the bulk of stock trading in Hong Kong, the delisting plan has heightened concerns about sanctions between China and the United States as tensions between superpowers escalate. Read more: TikTok, Hong Kong and more U.S.-China flashpointsKin businesses without military ties are also potentially vulnerable to delisting after Trump signed legislation with bipartisan support last month that could push firms out of U.S. exchanges if U.S. regulators failed to review their financial audits. Prospects could depend heavily on how U.S.-Chinese relations develop after President-elect Joe Biden enters the White House later this month. While Chinese President Xi Jinping said in a congratulatory message to Biden in November that he hopes to manage differences and focus on cooperation, few expect tensions to ease soon. We don't know how the Biden administration will pick up the baton left by the Trump administration, said George Magnus, a research fellow at Oxford University's China Center and author of Red Flags: Why China's Xi is in danger of speaking Monday before the NYSE reversal. There will certainly be a transitional cost to China if sentiment in the US remains sour. For more articles, as it is, please visit us at bloomberg.comSubscribe now to stay ahead with china's most trusted source of business news.©2021 Bloomberg L.P.The New York Stock Exchange (NYSE) said it will no longer delist China's three largest telecommunications companies to comply with the November 2020 executive order, outgoing U.S. President Donald Trump, in a surprise U-turn policy before the first delisting takes effect. Shares of the three companies - China Telecom, China Mobile and China Unicom (Hong Kong) - soared in Hong Kong following the NYSE announcement. The NYSE announced a delisting plan for the New Year, in an unprecedented move to remove U.S. Depositary Shares (ADS) from three Chinese companies to comply with Trump's order denying U.S. investors from trading companies having with China's military. All three three are state structures managed by government-appointed leaders. Get the latest insights and analysis from our Global Impact newsletter on the big stories coming from China. The NYSE reversed its delimiting decision after further consultation with regulatory agencies, according to a market report on Tuesday, without elaborating. The NYSE did not respond to a request for comment after hours of work in the US. Unicom shares jumped 8.5 per cent to a seven-week high of $4.85, while China Telecom advanced 3.4 per cent to HK$2.16. Shares of China Mobile, the operator of the world's largest cellular phone network, rose 5.1% to HK$46.10 after making their biggest intra-day profit in nearly 10 months. China Mobile said it would take steps to protect the legal rights of the company and its owners after the NYSE moved to delist the company. Photo: AP alt=China Mobile said it would take steps to protect the legal rights of the company and its owners after the NYSE moved to delist the company. Photo: AP I've always considered this decision strange to begin with,' said the head of telecommunications research, Jeffreys Edison Lee, pointing out that New York shares of CNOOC, a unit of the state-owned China National Offshore Petroleum Corporation, were not meant to delist. It wasn't a consistent decision. Three Chinese telecommunications companies listed their ADS in New York after their initial public offerings in Hong Kong, giving U.S. and European investors access to trade their shares during the hours of the U.S. market. Yang Yangzu, then chairman and chief executive of China Unicom, during the company's listing ceremony on the Hong Kong Stock Exchange on June 22, 2000. ADSs Unicom listed on the New York Stock Exchange at the same time as foreign investors sought to capture a chunk of China's fast-growing telecoms market. Photo: AFP alt=Yang Xianzu, then chairman and chief executive of China Unicom, during the company's listing ceremony on the Hong Kong stock exchange on June 22, 2000. ADSs Unicom listed on the New York Stock Exchange at the same time as foreign investors sought to capture a chunk of China's fast-growing telecoms market. Photo AFPAdists have fun with their H-share in Hong Kong, which means they can be exchanged for their colleagues. Each Chinese telecom ADVERTISING equates to 100 shares in Hong Kong, while unicom's ratio is 1 to 10, and China Mobile's ratio is 1 for 5.Three ADS are thinly traded on the NYSE, with China's heaviest telecom-ADSs making up no more than 12 percent of the number of H-shares that have changed hands daily in Hong Kong in 2020. For China Mobile, the ratio is only 6.9 percent, according to Bloomberg data. However, the three companies said on Monday that they would take steps to protect their Rights. The Company will promptly conduct investigations and analysis and its communication and communication with the regulatory authorities of its listing locations, with a view to protecting the legal rights of itself and the owners of the company's securities, China Mobile said in a statement. US President Donald Trump has blacklisted nearly three dozen Chinese companies because of their links to the Chinese military. Photo: Getty Images/TNS alt=U.S. President Donald Trump has blacklisted nearly three dozen Chinese companies because of their alleged ties to the Chinese military. Photo: Getty Images/TNS The U.S. role as a global financial center depends on confidence from global companies and investors in inclusivity and confidence in its rules, Chinese Foreign Ministry spokeswoman Hua Chunying said during a regular press briefing tuesday in Beijing, reiterating that the plan to delist Chinese companies has seriously violated the principles of market economy and fair competition [from the United States], as well as international economic and trade regulations. China Unicom and China Telecom said separately on Tuesday that they remain on the list on the NYSE, but the NYSE Regulation will continue to evaluate the inseversibility of the executive order to companies and their continued listing status. The company will continue to closely monitor the development of this issue and will publish a further announcement as and when appropriate, China Telecom said in a stock exchange filing. Meanwhile, investors are advised to exercise caution in working with the company's securities. Traders on the New York Stock Exchange (NYSE) march 18, 2020. Photo: Xinhua alt=Traders on the New York Stock Exchange (NYSE) on March 18, 2020. Photo XinhuaTrump on November 12 signed an executive order banning U.S. investors from owning or trading shares of 35 companies allegedly owned or controlled by the Chinese military. On December 28, the Trump administration provided further clarification that the order applies to all U.S. individuals ranging from individuals to pension funds, and will block investors from owning exchange-traded funds (ETFs) and index funds that included 35 companies and any of their 50 percent divisions and subsidiaries. U.S. persons have until November 2021 to divest their holdings. The NYSE reversal came just after FTSE Russell announced it would remove Unicom, Panda Electronics Group and Semiconductor Manufacturing International Corporation (SMIC) from its global stock benchmarks to match December guidance. The shares will be removed from the FTSE (GEIS) global equity index series, the FTSE China A Inclusion indices and related indexes starting on Thursday, the index compiler reported. The FTSE Russell will continue to monitor any further updates from the US Department of Defence (DOD) and the Office of Foreign Assets Control (OFAC), the company said. Any names published by DOD and OFAC as subject to sanctions will be assessed after January 11, 2021. Uncertainty over how U.S. policy will affect U.S. Chinese firms could benefit Hong Kong Exchanges & Clearing (HKEX), the operator of the city stock exchange. Over the past two years, the Hong Kong stock exchange has attracted secondary listings from several high-profile Chinese companies, such as the owner of that newspaper Alibaba Group Holding, NetEase and JD.com, as tensions have risen between the world's two largest economies. HKEX recently surpassed CME Group to become the most valuable stock exchange operator in the world, now valued at about $75 billion. The company's shares have risen 15 percent since late November.The company's recent stock growth is partly due to further escalation of tensions between the United States and China, including the potential for U.S. delisting by Chinese firms, according to Citigroup analyst Tian Yafei. Delistings of Chinese companies such as those previously announced by the NYSE are likely to underpin HKEX's status as a key listing location for companies. Tian said in a note on Monday. Chinese [U.S. depositary receipts] could also speed up secondary listings in Hong Kong, the bank added. Traders on the New York Stock Exchange watch President Donald Trump's televised return to the White House on March 18, 2020. Photo: AP alt=Traders on the New York Stock Exchange watch President Donald Trump's televised speech on March 18, 2020. Photo The AP FTSE Russell removed eight companies from its indices in December to comply with the original executive order, including China Railway Construction Corporation, surveillance camera maker Hangzhou Hikvision and supercomputer manufacturer Dawning Information, which is also known as Sugon.The removals followed other major stock and bond index compilers that provide benchmarks for global funds to measure their performances. MSCI and S&; P; Dow Jones Indices, two other major compilers, dropped a number of Chinese firms from its global indices in response to the order. The executive order is one of a series of steps taken in the waning days of the Trump administration to restrict access to U.S. capital markets by Chinese companies because relations between Beijing and Washington are the most strained in decades. Trump separately signed into law a bill in December that would require the NYSE and other exchanges to delist Chinese companies and other foreign firms that do not provide their audit work documents for U.S. surveillance for three years. Whether those policies introduced in the waning days of trump's presidency will prevail in the Biden administration is in question. U.S. President-elect Joe Biden's policy on China is expected to be more predictable than Trump's moves, but bipartisan remains about China in Washington. Washington. appeared in the South China Morning Post (SCMP), the most respected voiceover about China and Asia in more than a century. For more SCMP stories, please check out the SCMP app or visit SCMP's Facebook and Twitter pages.
