Ccna 4.0 final exam answers

1 2 3 4 5 6 7 8 9 This website or its third-party tools use cookies that are necessary for its operation and are necessary to achieve the goals illustrated in the cookie policy. If you want to know more or withdraw your consent to all or some cookies, please refer to the cookie policy. By closing this banner, scrolling through the page, clicking on the link, or continuing to view otherwise, you agree to use cookies. Click on the alphabet below to see the full list of models starting with this letter: No 0 1 2 3 4 6 7 7 8 8 8 B B D F G I J J K L M N O P S T U V W X Y - Double boiler, continuous filling system - allows you to add water at any time without having to wait Until the device cools down 5 bar - 72 PSI steam pressure Patented EMC2 technology prevents the accumulation of precipitation and scaling in the boiler Flexible hose with ergonomically designed handle, Which is a regular hot while running a digital pressure sensor to maintain the ideal level of steam Low Water Light Big rear wheels and swivel front wheel for stability and maneuverability Over length 16.6 feet cord power High quality 20-piece accessory set included standard accessories : Flexible hose with handle, 2 sticks, floor brush with filler pads, triangular brush with pad filler, squeegee window, brass tip nozzle, aluminum nozzle, 30 mm nylon brush, 30 mm white nylon brush, 30 mm brass brush, 30 mm stainless steel brush, scraper, slidding. Components manufactured in Italy, assembled in China Affordable residential steam cleaner Incredibly dry steam cleaner Pressure sensor to maintain the perfect level of steam High level stainless steel boiler Low level stainless water light indicator with automatic shutdown Compact, lightweight design Removable steam hose for easy storage Easy maneuverability Built-in safety features Included standard handles accessories: flexible hose with , small brass brush, wiper, high pressure nozzle, scraper, 2 cleaning fabrics and funnel Made in Romania Standard Accessories If you are looking for a good product, in general, most customers are happy with this product and strongly recommend it to everyone. Cleaning vapor used true steam for disinfection, deep cleaning and deodorizing in one easy operationGreat cleaning method for allergy sufferers or those who simply prefer smoke-free cleaning, commercial class attachments, good quality aluminum boilerDestroys germs, viruses, dust mites, mold, fungi, bacteria, dissolves and emulsifies Improves indoor air quality removes soap squimp and mold, degreases kitchenVapor steam cleaner uses true steam (285 degrees F for WhiteWing) for disinfection, deep cleaning and deodorization deodoriz easy operation without the use of cleaning chemicals. This is an attractive cleaning method for allergy sufferers or those who simply prefer smoke-free cleaning. Dry vapor kills dust mites, viruses, mold and fungi instantly. The steam cleaner can help with difficult cleaning tasks such as floors, tile solution, upholstery, carpets, car detailing and more. This AllergyBuyersClub.com steam cleaner is made for home use and comes with a closed board that humidity or an overflow tank can't effect. The manufacturer has been selling WhiteWing tools successfully in the commercial market for 6 years. The dashboard includes: power, on the button turn off, steam exit button, orange low water indicator, green light steam ready indicator, pressure sensor. Allow the block to cool for 20 minutes before the boiler is refueled (allowing time to take a break to clean). The filled tank will last up to 2 hours or more of continuous cleaning time and has an aluminum boiler that heats a full tank of water in about 10-15 minutes. Key safety features include a safety trigger on the handle to activate steam, a trigger lock switch on the handle, a low water light indicator (orange), a pressure safety cover, and a pressure sensor. The tip of the finger steam trigger on the handle provides a light and shutdown release of steam. A handy diagram in the owner's guide tells you what tool and level of steam to use for what cleaning is a chore. What delivery and processing options are available? For more information, please click on the link below and find the best deal for you. WhiteWing Steamer - Vapor Steam Cleaner WhiteWing Steamer - Vapor Steam Cleaner - Steam steam cleaner uses real steam (285 degrees Fahrenheit for WhiteWing) for disinfection, deep cleaning and deodorantization in one simple job without the use of cleaning chemicals. This is an attractive cleaning method for allergy sufferers or those who simply prefer smoke-free cleaning. Dry vapor kills dust mites, viruses, mold and fungi instantly. The steam cleaner can help with difficult cleaning tasks such as floors, tile solution, upholstery, carpets, car detailing and more. See more information. If you are looking for the top recommended WhiteWing Steamboat - Vapor Steam Cleaner, then WhiteWing Steamer - Vapor Steam Cleaner is our offer. Many good reviews already prove the quality of this product. WhiteWing Steamer - Vapor Steam Cleaner completes with a variety of possibilities, making it a great product. If you want to learn more about this tool search site, just read its main features below. Cleaning vapor used true vapor for disinfection, deep cleaning and deodorization in one easy operationGreat cleaning method for allergy sufferers or those who simply prefers smoke-free cleaningUbible design, commercial class attachments, good quality aluminum boilerDestroys germs, viruses, dust mites, mold, fungi, bacteria, dissolves and emulsifies greaseHelps to reduce allergies, improves indoor air quality removes soap styply and mold, degreases kitchen if it should have a product, make sure now to avoid disappointment. Get the best cheap price on the internet we have been looking for. Click here to get WhiteWing Steamboat - Steam Steam Cleaner right nowPrice: BUY NOW How to find: Click Ctrl and F in the browser and fill out any wording in question to find this question/answer. NOTE: If you have a new question on this test, please comment on the issue and list several options in the form below this article. We will update the answers for you as soon as possible. Thank you! We really appreciate your contribution to the website. 1. Which statement best describes THE WAN? WAN connects LANs over long distances. WAN is a utility that provides access to the Internet. WAN is another name for the Internet. WAN is a LAN that is expanded to provide secure remote access to the network. 2. Connecting offices in different locations using the Internet can be business-efficient. What are the two important business policy issues that should be addressed when using the Internet for this purpose? (Choose two.) solution to bandwidth privacy wan 3 technology. What is a disadvafntage network that is packaged compared to a network that has been switched to a scheme? Higher fixed capacity cost less flexibility is a higher latency. The company is considering upgrading the WAN campus to communications. What two WAN variants are examples of private WAN architecture? (Choose two.) cable rented Ethernet WAN municipal Wi-Fi digital subscription line 5. What is the description of the multiplexing of the dense wavelength division (DWDM)? It supports the SONET standard, but not the SDH standard. This allows you to communication on one pair of copper cables. It can be used in long-distance communications such of communications between providers. 6. What WAN technology can be used as the primary network for several types of network traffic, such as IP, ATM, Ethernet and DSL? ISDN MPLS Relay Relay Ethernet WAN 7. Which two WAN technologies are more commonly used by businesses than by workers or home users? (Choose two.) DSL Frame Relay Metroe VPN 8. The company's security policy stipulates that sales staff must use a VPN to connect to a corporate network to access sales data when they travel to meet customers. What component does sales staff need to create a remote VPN connection? VPN Gateway VPN device VPN Hub VPN client software 9. How many DS0 channels are included for the 1,544 Mbps T1 line? 10. What function does the PSO Multilink provide? traffic spreads across multiple physical WAN links separating the bandwidth of a single link to separate time slots, allowing traffic from multiple VLANs to travel to a single link in layer 2, creating one logical link between two LAN switches using multiple physical links 11. Check out the exhibition. The Network Administrator sets up the PPP connection between the R1 and R2 routers. However, the link cannot be established. Based on the partial release of the show's launch team, what is the cause of the problem? Usernames don't match each other. User names don't match host's names. The r1 username must be set up on the R1 router, and the username r2 must be configured on the R2 router. 12. Refer to the exhibition. The network administrator sets up RTA and RTB routers, but can't ping from a serial interface to a serial interface. Which layer of the OSI model is the most likely cause of the problem? The transport network's physical 13 app. What is the advantage of DSL over cable technology? The speed at which DSL is downloaded and downloaded is always the same. DSL is faster. DSL has no distance limits. DSL is not a common environment. Which broadband technology would be better for a user who needs remote access when traveling in the mountains and at sea? Wi-Fi Grid mobile broadband WiMax satellite No. 15. What technology requires PPPoE to connect PPP to customers? dialup ISDN modem DSL T1 16. Check out the exhibition. What does the network administrator check when issuing a short show in statement command on R1 regarding ppPoE connection to R2? that the Dialer1 interface is manually assigned to the IP address that the Dialer1 interface us up and that Dialer1 interface was assigned to the IP address router that the IP address on R1 G0/1 is in the same network range as the DSL 17 modem. What technology creates the display of public IP addresses for remote tunnel spokes in the DMVPN configuration? 18. What is the purpose of the general encapsulation protocol? ensure that IP traffic is encrypted at the package level between remote sites to manage the transport of multi-protocol and multi-protot traffic between remote sites to support a basic unencrypted IP tunnel using multi-rard routers between remote sites to ensure fixed flow control mechanisms using IP tunnels between remote sites 19. Check out the exhibition. What is used to share routing information between routers within each AS? static routing protocols of IGP routing protocols EGP routing protocols by default routing 20. What range of IPv4 addresses covers all IP addresses that correspond to the ACL filter specified 172.16.2.0 with a wildcard mask 0.0.1.255? 172.16.2.0 to 172.16.255 172.16.2.1 to 172.16.3.254 172.16.2.0 to 172.16.3.255' 172.16.2.1 to 172.16.255.255 21. Check out the exhibition. The named access list, called chemistry_block was written to prevent users from accessing the Recording Server from accessing the chemical network and the public Internet. All other school users should have access to this server. The list contains the following statements: refuse 172.16.102.0 0.0.0.255 172.16.104.252 0.0.0.0 resolution 1 72.2.0 16.0.0 0.255.255 172.104.252 0.0.0.0 What sequence of teams will place this list to meet these requirements? Hera (config) fa0/0 Hera (config-if) interface, IP access group chemistry_block in Hera (config) , s0/0/0 Hera interface (config-if) IP access-group chemistry_block out Apollo (config) interface s0/0/0 Apollo (0/0 Apollo)config-if) IP access group chemistry_block out Apollo (config) interface fa0/0 Apollo (config-if) ip access-group chemistry_block in Athena (config) interface fa0/0 Athena (config-if) ip access-group chemistry_block out 22. What guidelines do guidelines usually follow about the placement of expanded access control lists? They should be placed as close as possible to the source of traffic that will be denied. They should be placed on the fastest interface available. They should be posted on the WAN destination link. 23. When creating an IPv6 ACL, what is the purpose of implicit final command records, allow icmp any nd-na and allow icmp any nd-ns? to IPv6's MAC resolution address to allow IPv6 multicast packages to allow automatic address configuration to allow the resold packages of ICMPv6 24. The network administrator doesn't want any other host to connect to except for one test computer. What type of IPv6 ACL can be used for this situation? only standard ACL standard or extended ACL only extended ACL ACL The extended, named or moderated ACL is only named ACL 25. Check out the exhibition. The IPv6 access list LIMITED_ACCESS is used on the S0/0/0 R1 interface in incoming directions. Which IPv6 packages from the provider will be removed by ACL on R1? HTTPS packages for PC1 ICMPv6 packages that are designed for PC1 packages that are designed for PC1 in port 80 neighbor advertising that are sourced from router provider 26. What is a secure configuration option for remote access to a network device? Set up SSH. Set up Telnet. Set up 802.1x. Set up an ACL and apply it to VTY lines. 27. What protocol should be disabled to help mitigate VLAN attacks? 28. What term describes the role of the Cisco switch in the 802.1X port access management? Agent requester authentication server 29. What two protocols are supported on Cisco devices for AAA communications? (Choose two.) VTP LLDP HSRP RADIUS TAKAKI 30. When setting up SNMPv3, what is the purpose of creating an ACL? identify the original traffic that can create a VPN tunnel to determine the type of traffic that is allowed in the control network to indicate the original addresses allowed to access the SNMP agent to determine the protocols allowed for to use for authentication and encryption 31. Check out the exhibition. What function does an SNMP manager need to be able to set the setting on the ACSw1 switch? a manager who uses a string of SNMP K44p0ut manager who uses a Inform Request MIB manager who uses a host 192.168.0.5 manager who uses autPriv 32. Which Cisco function sends copies of frames entering one port to another port on one switch to perform traffic analysis? What are the two characteristics of video traffic? (Choose two.) Video traffic is more resistant to loss than voice traffic. Video traffic is unpredictable and inconsistent. Video traffic consumes less network resources than voice traffic consumes. What mechanism does the AIA allow you to first send data sensitive to delays, such as voice, before sending packages to other queues? Contact the exhibition. As traffic is forwarded out the egress interface with the treatment of qoS, which congestion avoidance technique is used? formation of traffic weighted random classification of early detection and marking of traffic police 36. What type of AIA marking is applied to Ethernet footage? CoS' tos DSCP IP priority 37. What is the function of the AIA trust boundary? The trust boundary determines where traffic cannot be laughed at. The trust boundary determines which devices trust labeling on packages that have a network.The trust boundary allows traffic to enter only if it has previously been marked. The trust boundary allows only traffic from trusted endpoints to enter 38. The vibration sensor on the automation production line detects an unusual state. The sensor communicates with the controller, which automatically turns off the line and activates the alarm. What type of communication does this scenario represent? car-to-people machine-to-car people to car 39. What pillar of Cisco IoT system allows you to analyze and manage data in the place where it is generated? Data analysis fog computing network connectivity platform raising 40. Which cloud computing service is best for a new organization that can't afford physical servers and network hardware and needs to purchase an on-demand network services? The data center recently updated a physical server to place multiple operating systems on the same processor. The data center can now provide each customer with a separate web server without allocating an actual discrete server for each client. What is the network trend that the data center is implementing in this situation? BYOD virtualization, maintaining the integrity of communication in online collaboration 42. What is used to pre-fill the adjacency table on Cisco devices that use CEF to handle packages? ARP table in fib DSP 43 routing table. What is a wildcard mask that is associated with the network 128.165.216.0/23? 0.0.0.255 0.0.1.254 0.0.1.255* 0.0.1.0 0.0.0.254 44. What two features have been added to SNMPv3 to address the shortcomings of previous versions of SNMP (Choose two.) authorization of encryption authentication with the priority of managing the ACL community line, filtering 45 MIB 3D objects. Which component of the ACI architecture translates application policies into network programming? The Nexus 9000 switches the final app network profile, allowing the application policy infrastructure controller, Hypervisor 46. What two parts of the information should be included in the logical topological chart of the network? (Choose two.) OS/IOS device type connection type version of the cable identifier cable identifier specification type and ID 47. What network performance statistics should be measured to verify SLA compliance? NAT processor translation statistics and memory delays, frights and loss of packages number of error messages that are logged on the syslog 48 server. Which feature sends simulated data over the network and measures performance between multiple network locations? 49. What troubleshooting tool will the network administrator use to check the idle of layer 2 frames that leave a particular host? CiscoView 50 basic knowledge protocol analyzer. Check out the exhibition. Network Administrator tool for OSPF Network TroubleShoot. Network 10.10.0.0/16 does not appear in the table Router1. What is the likely cause of this problem? Serial Serial on Router2 not in his life. The OSPF process does not work on Router2. The OSPF process is incorrectly configured on Router1. There is an incorrect statement of wildcard masks for the 10.10.0.0/16 network on Router2. Check out the exhibition. The user turns on the computer after its service and calls support to report that the computer does not seem to be able to reach the Internet. The technician asks the user to give commands arp-a and ipconfig. On the conclusion, what are the two possible causes of the problem? (Choose two.) The IP configuration is incorrect. The DNS server address has not been set up. The subset mask is incorrectly configured. The default gateway device cannot be contacted. What will lead to a company deciding to implement a corporate WAN? when its employees are distributed to many branches, when the network will cover several buildings, when the number of employees exceeds the capacity of LAN, when the company provides its corporate LAN 52. Coincidence of AIA methods with description. (Not all options are used.) The excess of traffic is stored in the queue and is planned for more than 2nd time - traffic, forming excess traffic, is sticking out when the speed of traffic reaches a pre-configured maximum - What are the two types of WAN suppliers? (Choose two.) DNS servers of the satellite web hosting service of the telephone company Internet search engine service 54. What two types of devices are specific to WAN environments and are not online? (Choose two.) Broadband modeum access switch - CSU/DSU's main switch - router S5 distribution layer. What is the feature of the dwdM multiplexing technology? It replaces SONET and SDH technology. It provides a two-way link on a single fiber strand. It provides a 10GB/s multiplex signal on analog copper phone lines. 56. What is the disadvantage of an ATM compared to Frame Relay? Less efficient Iack of SVC support doesn't scale well to ensure the high speed WAN connection requires multiple interfaces on the edge of the router to support multiple VCs 57. What WAN solution uses tags to determine how packages are sent through a network of vendors? DSL Frame Relay MPLS VSAT 58. The long-distance bus company wants to offer a permanent Internet connection for users traveling by bus. What two types of WAN infrastructure will meet the requirements? (Choose two.) Private Public Infrastructure dedicated scheme-switched cellular communications No. 59. What device in the central office to aggregate many digital subscription lines from customers? SMTS DSLAMS HSS/DSU HSS/DSU Server 60. The corporation is looking for a simple and inexpensive solution to provide teleworkers with a safe connection to headquarters. What solution should I choose? dialed connection of the site's leased connection line to the VPN site via the Internet's remote ACCESS VPN via the Internet. What is the maximum number of DS0 channels in the 1.544 Mbps T1 line? Contact the exhibit. What type of layer 2 encapsulation will be used to connect RtrA D if it is left by default and the router is a Cisco router? Ethernet Frame Relay HDLC PPP 63. What two features are provided by NCP while PPP is connected? (Choose two.) Identifying fault conditions for the PPP link that provides a multilink to the PPP link, resulting in network layer protocol or up-and-down network problems the type of traffic that is allowed to indicate the original network problems the authentication of peer routines failing PPP 64. What information about PPP will you see if a network engineer sucks out a multilinks show ppp command on a Cisco router? Link LCP and NCP status queue type on link IP addresses links interfaces of certain interfaces involved in multilink 65. Check out the exhibition. What statement describes the state of the PPP connection? Only the networking phase has been successfully completed. Neither the communication phase nor the network level stage have been successfully completed. Both the communication phase and the network level have been successfully completed. The communication phase and the network level stages are in progress. What command sets up the PPP link with commands: R1 (configuration-if) ppp R1 encapsulation (configuration-if) - the quality of the ppp 70 What is the effect of these commands? The ppp link will be closed if the quality of the link drops below 70 percent. The NCP will send a message to the dispatch device if the use of the link reaches 70 percent. The LCP phase will not begin until the bandwidth reaches 70 percent or more. The PPP link will not be installed if more than 30 percent of utilization cannot be accepted. How does virtualization help in disaster management in the data center? Food is always provided. Less energy is consumed. The server is always reserved faster. The equipment should not be identical. What broadband solution is appropriate for a home user who needs a wired connection that is not limited to a distance? 69. What is the protocol that allows PROVIDERS to send PPP footage through DSL networks? What architecture, what function is removed from network devices and performed by the SDN controller? Control of the plane data of the security policy 71 security plane. As much as the network administrator expected the R1 router table to look like, was connected to the provider through the PPPoE configuration? 192.168.1.0/32 is a subnet, 2 2 C 192.168.1.1 directly connected, Dialer1 C 192.168.1.2 directly connected, Dialer1 C 192.168.1.2 directly connected, Dialer 2 0.0.0.0/0 directly connected, Dialer1 S'0.0/0 is directly connected, Dialer 5'0.0/0 is directly connected, Dialer1 192.168.1.0/32 is a subnet, 2 sub-prisoners C 192.168.1.1 are directly connected, Dialer1 C 192.168.1.2 is directly connected, Dialer1 72. What is the advantage of introducing a dynamic multi-point vpn of network design? DMVPN will use an encrypted session and does not require an IPsec. DMVPN uses the Layer 3 protocol, NHRP, to dynamically create tunnels. DMVPN will support remote nodes by providing a mapping database of public IP addresses for each of them. 73. What remote access scenario would support the use of general encapsulation routing tunneling? a mobile user who connects to the central site of the Ata branch router, which securely connects to the central site of the mobile user, which connects to the SOHO central site, which connects to the SOHO site without encryption. Check out the exhibition. All routers are successfully operating under the BGP routing protocol. How many routers should EBGP use to share routing information in autonomous systems? What is the description of standard APv4 ACLs? They're configured in interface configuration mode. They only filter traffic based on the original IP addresses. They can be configured to filter traffic based on both original IP addresses and sequential ports. What three values or sets of values are included in the creation of an expanded access control list? (Choose three.) Access list number between 1 and 99 access list number between 100 and 199 default gateway address and wildcard mask destination address and wildcard mask the original address and the subnet of the candlestick subspot sign and wildcard mask 77. Check out the exhibition. The router has an existing ACL that allows all traffic from the 172.16.0.0 network. The administrator tries to add a new ACE to the ACL, which denies a packages from 172.16.0.1 and receives an error message shown in the show. What action can an administrator take to block packages from host 172.16.0.1, while allowing all other traffic from the 172.16.0.0 network? Manually add a new ACE failure with a sequence number of 15. Create a second access list that denies the host and apply it to the same interface. Add denying any ACE to access list 1 78. Which three implicit access control records are automatically added to the end of the IPv6 ACL? (Choose three.) deny IP any deny any permission IPv6 any deny icmp any icmp any nd-na' resolution icmp any nd-ns 79. Computers used by network administrators for the school are on the network 10.7.0.0/27. Which two commands are needed at least for the use of the ACL, which ensures that access to routers will only be allowed to devices used by network administrators? (Choose two.) Access Class 5 in Access 5 access list to deny any access list of standard VTY 10.7.0.0 0.0.0.0.127 access list 5 resolution 10.7.0.0 0.0.0.31 IP access group 5 from IP Access Group 5 in 80. The Network Administrator adds the ACL to the new multidimensional IPv6 environment. Which IPv6 ACE is automatically added implicitly at the end of the ACL so that two adjacent routers can detect each other? IP permission any IP permission any IP 81. What will be the main reason why an attacker launches a mac-address overflow attack? so the switch stops rewinding traffic so that legitimate hosts can't get a MAC address so that the attacker can see the footage intended for other hosts so that the attacker can execute arbitrary code on Switch 82. What are three of the six main components of Cisco IoT? The Fog Computing' wearable data analysis robot directs cyber and physical security smart bandages 83. What security measures are effective in preventing ATTACKS from overflowing CAM tables? DHCP Port Security Surveillance IP Source Guard Dynamic ARP Inspection 84. What SNMP function provides a solution to the main drawback of the SNMP query? SNMP's SNMP message set traps SNMP community line messages of 85. When SNMPv1 or SNMPv2 is used, what feature provides secure access to MIB objects? The encryption package of the community integrity message strings is the source of the information of the 86th. Which two are added to SNMPv3 to address the shortcomings of previous versions of SNMP? (Choose two.) mass authorization of MIB messages with priority authentication of the ACL community line of filter management 87. What queue mechanism supports user-defined traffic classes? 88. What field is used to mark the framework of Layer 2 of Ethernet for the treatment of AIA? The Service Field Type Priority Field Traffic Class Version is field 89. What is the example of cloud computing? Continuous interaction between people, processes, data and service things that offers on-demand access to shared resources network infrastructure that encompasses a large geographic area of the architectural style of the World Wide Web 90. What type of resources is required for a Type 1 hypervisor? VMware Fusion host operating system, VLAN 91 remote control. The network technician made a configuration change on the main router, solve the problem. However, the problem has not been solved. What step should the technician take next? Gather Isolate the problem. Restore the previous configuration. The user reports that when a corporate web page is entered into a web browser, an error message indicates that the page cannot be displayed. A support professional asks the user to enter the web server's IP address to see if the page can be displayed. What is the method of troubleshooting used by the technician? Divide from top to bottom and win 93. What is the main function of Cisco iOS IP services? to detect potential network attacks to provide network connectivity for customers to customize network device configurations to avoid overload to measure network performance and detect network failure as early as possible. What level of IOS reports indicates the highest level of seriousness? Level 0 Level 1 Level 4 Level 7 95. What symptom is an example of network problems on the active network? The wrong firewall blocks traffic to the file server. There are too many invalid frames on the network. Neighboring administration is formed with some routers, but not others. Contact the exhibit. H1 can only ping H2, H3, and Fa0/0 router interface R1. H2 and H3 can ping H4 and H5. Why can't H1 be able to successfully ping H4 and H5? The R1 router has no route to the destination network. The S1 switch is not set up for an IP address. The connection between the R1 router and the S2 switch failed. The H1 host does not have a default gateway. Contact the exhibit. Based on the conclusion, what two statements about the connection to the network are correct? (Choose two.) There is a connection between the host and the device on 192.168.100.1. Between this device and device 4 jumps on 192.168.100.1. The average transfer time between the two hosts is 2 milliseconds. This host is not the default gateway set up. Fill in the gaps. Use a dotted decimal format. The wildcard mask associated with 128.165.216.0/23 is 0.0.1.255 99. Appropriate characteristic to appropriate authentication protocol. (Not all options are used.) Compare the term with the description. (Not all options are used.) 101. What is the main difference between LAN and wan services that it uses? The company must subscribe to an external WAN service provider. The company has direct control over its WAN links, but not over its LAN. Each lan has a specified demarcation point for a clear separate access layer and distribution layer equipment. LAN can use a number of different standards of level of access to the network, while WAN use only one standard. At which two levels of the WAN model do WAN provide services? (Choose two.) layer of the session of the network layer of the physical layer, the data layer of the transport layer, the filter layer 103. Which two technologies are private wan technologies? (Choose two.) Cable frame Retransmission DSL ATM' cellular 104. What WAN technology can switch any payload based on tags? What technology can be used to create a private WAN using satellite communications? VPN 3G/4G cellular sat VSAT- WiMAX 106. What public access technology does WAN use cooper phone lines to provide access to subscribers who are multiplexed in a single T3 connection? 107. How many DS0 channels are limited to the production of the DS1 1,544 MB/S line? Contact the exhibit. The connection between the two colleagues failed. Based on the products shown, what is the most likely cause? interface reset disabled cable of the wrong type of PPP cable issue 109. Check out the exhibition. What type of layer 2 encapsulation is required to connect D to Cisco routers? Three statements are true with regard to PPPs? (Choose three.) PPP can use synchronous and asynchronous circuits. PPP carries packages from multiple network-level protocols to LCPs. PPP uses LCPs to create, customize, and test connections to data links. The Network Administrator evaluates the authentication protocols for the PPP link. What three factors can lead to CHAP choosing PAP as an authentication protocol? (Choose three.) installs identifiers with a two-legged handshake, periodically uses three-step authentication during a session to confirm the remote host's control of the frequency and time of the login event transmission to the encrypted format, uses the unpredictable value of the variable task to prevent playback attacks, making authorized administrator interference a requirement to establish each session 112. What is the standard of cellular or mobile wireless communication considered a fourth-generation technology? 113. The company is looking for the least expensive broadband solution that provides download speeds of at least 10 Mbps. What broadband solution would be appropriate? DSL WiMax 114 satellite cable. What technology can PROVIDERS use to periodically call broadband customers via DSL networks with PPPoE? PAP CHAPS HDLC Relay 115. What are the three main components of Cisco ACI architecture? (Choose three.) Cisco Nexus Application Application Policy Controller switches to Cisco Information Server Virtual Security Gateway 116. What statement describes the VPN function from x cairy? The VPN VPN not determined statically. VPN client software is installed on each host. Internal hosts send regular, unfinished packages. What are the three features of the GRE tunnel? (Choose three.) creates unprotected tunnels between remote sites, transports multiple Layer 3 protocols, creates additional package overheads, uses RSA signatures to authenticate, which provides encryption to ensure VPN traffic privacy as endpoints of the GRE tunnel by installing Cisco VPN 118 client software. Check out the exhibition. Which two commands are needed to complete the GRE tunnel configuration on the R1 router? (Choose two.) R1 (config-if) - tunnel source 209.165.202.129 R1 (config-if) , the source of the tunnel 172.16.2.1 R1 (config-if) , destination tunnel 206.165.202.130 R1 (R1 (Confederate) Config-if) - Destination tunnel 172.16.2.2 R1 (config-if) , tunnel source 209.165.202.130 R1 (config-if) tunnel destination 206.165.202.129 119. What does BGP use to share routing updates with neighbors? TCP's number number 120. Check out the exhibition. A network administrator with an IP address of 10.0.70.23/25 must have access to the FTP corporate server (10.0.54.5/28). The FTP server is also a web server that is available to all internal network employees within the 10.x.x.x. What advanced ACL will be used to filter this traffic, and how will this ACL be applied? (Choose two.) access-list 105 permit tcp host 10.0.70.23 host 10.0.54.5 eq www access-list 105 permit tcp host 10.0.70.23 host 10.0.54.5 eq 21 access-list 105 permit tcp host 10.0.70.23 host 10.0.54.5 eq 21 access-list 105 permit tcp host 10.0.70.23 10.0.54.5 eq any access-list 105 permit tcp host 10.0.70.23 host 10.0.54.5 eq www access-list 105 permit any any access-list 105 permit tcp host 10.0.0.0 0.255.255.255 host 10.0.54.5 eq 21 access-list 105 deny ip any host 10.0.54.5 access-list 105 permit ip any any* R2(config)# interface gi0/0 R2(config-if)# ip access-group 105 in R1(config)# interface s0/0/0 R1(config-if)# ip access-group 105 out* R1(config)# interface gi0/0 R1(config-if)# ip access-group 105 out 121. Check out the exhibition. Which two commands are needed to complete the FTP connection? The ACL is missing to deny IP any ACE. Because there are no matches for line 10, the ACL doesn't work. The ACL is only traffic monitoring designed for 10.23.77.101 of the three specific hosts. The router did not have Telnet packages from 10.35.80.22, intended for 10.23.77.101. What is the only type of ACL available for IPv6? The standard Extended number standard, moderated by an extended 123. What recording of the IPv6 ACL command will allow traffic from any host to the SMTP server on 2001:DB8:10:10::/64? resolution tcp any host 2001:DB8:10:10:100 eq 25 resolution tcp host 2001:DB8:10:10:100 any eq 25 resolution tcp Any host 2001:DB8:10:10:100 any eq 23 resolution tcp host 2001:DB8:10:10:100 any eq 23 124. Check out the exhibition. Given how packages are handled on an ACL router, what is the correct order of operators? C-B-A-D A-B-C-D C-B-D-A'A B-A-A-D-C D-A-C-B 125. Which two hypervisors are suitable for supporting virtual machines in the data center? (Choose two.) VMware Fusion VMware VMware ESX/ESXi Oracle VM VirtualBox Microsoft Hyper-V 2012' 126. How can DHCP spoof attacks be mitigated? by disabling DTP's negotiations on non-intruding ports by implementing DHCP surveillance of relabeling on trunk ports by introducing port security by applying the ip verify source command to unreliable ports 127. What action can a network administrator take to help reduce the threat of VLAN attacks? Turn off VTP. Set up all switch ports to be members of VLAN 1. Turn off automatic barrel negotiations. Turn portFast on all switch ports. What type of message does SNMP immediately inform the network management system (NMS) of certain specific events? Get the SET request to GET response Trap 129. Check out the exhibition. The SNMP manager uses the snmpenable community line and is configured with an IP address of 172.16.10.1. The SNMP manager cannot read the configuration variables on the R1 SNMP agent. What could be the problem? The SNMP agent is not configured to read only. The snmpenable2 community is incorrectly configured to the SNMP agent. The ACL does not allow access to the SNMP manager. Contact the exhibition. SNMP authentication password should be supplied by a member of the ADMIN team on the R1 router? cisco54321 cisco98765 cisco123456 cisco654321 131. The network administrator noticed an unusual amount of traffic received on the switch port, which is connected to a college computer class. What tool will the administrator use to make suspicious traffic available for analysis in a college data center? RSPANG TAKAX 802.1X DHCP surveillance SNMP 132. Voice packets on a regular IP phone network, but due to network overload, the latency between each package varies and causes broken conversations. What term describes the cause of this condition? buffering the delay of the queue fright No. 134. What mechanism compensates for the fright in the audio stream by buffering the packages and then playing them out in a steady stream? digital processor signal playback delay buffer voice codeKWF 135. What type of network traffic can't be managed escape tools? The network administrator transferred the company's web server from the Switch port to a special router interface. How can an administrator determine how this change has affected the performance and availability of the company's intranet? Take a quantitative measurement of the baseline that was set earlier. Interview departmental administrative assistants to determine if web pages are downloading faster. Compare the number of bumps on the company's web server in the current week with those recorded in previous weeks. At what stage of the troubleshooting process will property rights be investigated and documented? Collect the symptoms. Isolate the problem. Update the user and document the problem. What's the best way to fix trouble for an experienced network administrator than a less experienced network administrator? A less structured, guess-based approach compares working and non-working components to detect significant differences in structured approach, starting with the physical layer and moving up the layers of the OSI model until the cause of the problem is determined by an approach that starts with the end-user's applications and moves down the layers of the OSI model until the cause of the problem is determined by 139. The router was configured to connect network traffic to monitor network performance between the router and the remote network device. Which team will display the results of this analysis? Show ip-route showip protocols show ip sla statistics show monitor 140. What type of tool will the administrator use to capture packages that are collected from a particular device? The nmS tool's knowledge base, the basic analysis base of the 141 instrument protocol analysis. Check out the exhibition. What two statements describe the results of these commands? (Choose two.) R1 will send level 0 system messages (emergencies) to Level 4 (warnings) to the server. R1 will reset all warnings to clean up the log. R1 will display system messages in local RAM. The syslog server has an IPv4 address of 192.168.10.10. Check out the exhibition. The network administrator discovers that Host A is having trouble connecting to the Internet, but the server fam has a full connection. In addition, Host A has a full connection to the server. What action can a network administrator take to help reduce problem? The router has the wrong gateway. Host A set up the default gateway. Host A has the wrong subnet mask. NAT required for host network A. the AIA model. Lead. Compare the cloud model with the description. 145. Match the firewall traffic is zgt; when excess traffic has decreased when the speed of traffic reaches a pre-configured maximum. The value marking is added to the header of the package. Traffic formation - excess traffic is stored in the queue and is scheduled for more than 2nd transmission with more time. This determines the traffic class to which the frames belong. Empty - TCP traffic is smothered to prevent the host from falling. What are two factors that allow businesses to communicate safely and perform Internet operations? (Choose two.) security - privacy solution and WAN 147 bandwidth. What are the two allegations about DSL true? (Choose two.) Users are on a common environment uses radio signal transmission local cycle can be up to 3.5 miles (5.5 km) , physical and communication layers data determined by DOCSIS connecting users aggregated on DSLAM located on CO 148. What are the two allegations true regarding the PPP connection between the two Cisco routers? (Choose two.) LCP checks the quality of the link. The NCP terminates the link when the data exchange is complete. With CHAP authentication, routers exchange simple text passwords. The network administrator was asked to develop a system that would allow 250 users to access the Internet at the same time. The provider can only provide five public IP addresses for that network. What technology can the administrator use to do this? The classy subnetization of the variable-length subnet masks the classless inter-domestic routing of port network 150. Check out the exhibition. The administrator sets up NAT to provide Internet access to the internal network. Once the configuration is complete, users cannot access the Internet. What is the cause of the problem? The NAT pool uses an invalid range of addresses.

The internal and external interfaces are in the opposite direction. ACL refers to the wrong network address. The internal NAT source team refers to the wrong ACL. What is the expected behavior of ADSL? Download speeds are faster than download speeds. The user can choose the download and download speed, depending on the need. 152. Dynamic NAT, a network troubleshooter that is configured on the R2 router. Which team can the administrator use to see the total number of active NAT translations and the number of addresses allocated from the NAT pool? R2 show IP Nat stats R2 show IP Nat translations R2 show running-config R2 clear IP Nat translation 153. What type of traffic, will have trouble going through the NAT Telnet IPsec HTTP ICMP DNS 154. Check out the exhibition. The internal local PC-A IP address is 192.168.0.200. What will be the internal global address of PC-A packages after they are translated by R1? 10.0.0.1 172.16.0.1 192.168.0.1 192.168.0.200 209.165.200.225* 155. Check out the exhibition. Which NAT is set up for R1? THE SPEAKER PAT NAT port overload is overloaded No. 156. What is the benefit of NAT64? This allows sites to use private IPv6 addresses and transfers them to global IPv6 addresses. This allows sites to connect multiple IPv4 hosts to the Internet using a single IPv4 public address. This allows sites to connect IPv6 hosts to the IPv4 network by translating IPv6 addresses to IPv4 addresses. What are the three benefits of using Frame Relay to connect WAN? (Choose three.) Support for the zoos using the IP priority field is one physical interface that can be used for multiple integrated encryption technology of mature reasonable cost seamless direct connection to the Ethernet LAN 158. The DLCI number assigned to the Frame Relay scheme must be manually added to the link from point to point. Which three underground commands can be used to complete the configuration? (Choose three.) bandwidth kilobites encapsulation frame-relay frame-relay interface-dlci dlci' frame-relay map IP address dlci-address IP address mask no shutdown 159. Which team can be used to verify congestion information on Frame Relay? Show frame relay pvc' show frame relay lmi show interfaces show frame-relay map 160. Check out the exhibition. The network administrator put the configuration into the displayed output. What is missing in a configuration that will prevent OSPF routing updates from being transferred to Frame Relay? The passive interface command was not released on the 0/1/0 serial interface. The broadcast keyword was not issued. The disconnect team of the divided horizon was not issued. 161. What is the Frame Relay feature that allows customers' data to flow dynamically to burst over their CIR for short periods of time? The combination of LMI status messages and ARP backlinks allows you to exceed CIR. Frame Relay's physical schemes are divided between subscribers, and there may be times when unused bandwidth is available. BECN and FECN messages notify the router that cir may be exceeded. 162. Which broadband technology would be best suited to a small office that requires a fast-rising DSL fiber-home WiMax 163 cable. What technology requires PPPoE to connect PPP to customers? the isDN modem modem set of the DSL T1 164 modem. Why is it useful to classify networks by size when discussing network design? Knowing the number of connected devices will determine how many multi-layer switches will be needed in the main layer. Knowing the number of connected devices will determine how many additional layers will be added to the three-tier hierarchical network design. With a known number of connected devices, high-level redundancy at the access level can be better implemented. The complexity of the network infrastructure will vary depending on the number of devices connected. The company connects to one provider through several connections. What is the name of this type of connection? one-room 2hom-room 2homable No. 166. What is one of the advantages of designing networks in a fashion building block for large companies? bounce insulation increased the time of rough network security management, less physical resources needed 167. Which network module supports the resources that employees, partners, and customers rely on to effectively create, collaborate, and interact with information effectively? Access Services Data Center Corporate Edge 168. A group of Windows PCs in the new subnet has been added to the Ethernet network. When you test your connection, a device discovers that these computers can access local network resources rather than Internet resources. To fix the problem, the technician wants to first confirm the configuration of the IP address and DNS on the PC, as well as check the connection to the local router. Which three Windows CLI commands and utilities will provide the information they need? (Choose three.) arp -a ipconfig'nslookup' ping' telnet tracert interface ipv6 shows a neighbor 169. The engineering team identified a solution to a significant network problem. The proposed solution is likely to affect critical components of the network infrastructure. What should the team follow when implementing the solution so as not to interfere with other processes and infrastructure? Change Management Procedures - One of the layered troubleshooting systems fits the basic sislogue and reports 170 recommendations. Which two specialized troubleshooting tools can control the amount of traffic that passes through the switch? (Choose two.) TDR is a digital multi-meter portable network analyzer DTX 171. What is the typical statement for the MIB SNMP? MIB organizes variables in a flat manner. The SNMP agent uses the SNMP manager to access information in the MIB. NMS must have access to MIB in order for SNMP to work properly. that device or supplier. Referring to Exhibition. The R1 router was configured by a network administrator to use version 2 of SNMP. The following commands were published: R1 (config) snmp-server community batonaug ro SNMP_ACL R1 (config) snmp-server contact Wayne World R1 (config) snmp-server host 192.168.1.. 3 version 2c batonaug R1 (config) IP access list standard SNMP_ACL R1 (config-std-nacl) resolution 192.168.10.3 Why the administrator is not able to get any information from R1? The Snmp server to include the trap team is missing. The snmp-server community team should include the rw keyword. There is a problem with the ACL configuration. 173. What is used as the default event registration location for Cisco routers and switches? Terminal line syslog server console line' workstation 174. In the process of collecting data, what type of device will listen to traffic, but only collect traffic statistics? NMS syslog server NetFlow collector SNMP Agent 175. What three streams associated with consumer applications are supported by NetFlow collectors? (Choose three.) bandwidth accounting regulation billing quality monitoring network correction of service errors No. 176. Which algorithm is considered unsafe to use in IPsec encryption? Two corporations have just completed the merger. The network engineer was asked to connect two corporate networks without the cost of renting the lines. What would be the most cost-effective way to ensure proper and secure communication between the two corporate networks? Cisco AnyConnect Secure Mobile Customer with SSL Cisco Secure Mobility Without Customers SSL VPN Frame Remote VPN Access remote access via IPsec site on VPN 178. Check out the exhibition. Which IP address is configured for the physical interface of the CORP router? 10.1.1.1 10.1.1.2 209.165.202.133* 209.165.202.134 179. What are the three characteristics of the overall routing encapsulation protocol (GRE)? (Choose three.) GRE tunnels support multi-cash traffic. GRE creates additional overheads for packages that travel via VPN. GRE provides encapsulation for one type of protocol that travels via a VPN. What two statements describe a remote-access VPN? (Choose two.) Remote access VPNs are used to connect entire networks, such as affiliate to headquarters. End users are unaware that VPNs exist. A leasing line is required to implement a remote access VPN. Which two categories of WAN connections are suitable for Frame Relay? (Choose two.) public infrastructure infrastructure dedicated to disabling the package on the Internet 182. What term is used to determine where a customer network ends and a network of service providers starts? CSU/DSU central office is a local demarcation point cycle183. What two characteristics describe time multiplexing? (Choose two.) Traffic is allocated bandwidth through a single wire based on pre-scheduled deadlines. coding technology provides high data bandwidth in the minimum RF spectrum, supporting parallel data transmission. Depending on the protocol of the tuned layer 2, data is transmitted through two or more channels at time intervals. The data capacity on one link increases as bits are transferred from multiple sources using intertwined time fragments. The branch uses a leased line to connect to the corporate network. A leading network engineer confirms the connection between users in the branch, but none of the users can access the corporate headquarters. System logs indicate that nothing has changed in the branch network. What does an engineer have to consider nearby to solve this network failure? The branch's network technician must fix the problem in the switched infrastructure. The system administrator in the branch should reconfigure the default gateway on users' computers. The system administrator in the branch must reconfigure the DHCP server. The branch service provider must fix the problem, starting at the point of demarcation. Check out the exhibition. What three steps are needed to set up Multilink PPP on the headquarters router? (Choose three.) Assign serial interfaces to a multi-lyss package. Include PPP encapsulation on the multi-link interface. Include PPP encapsulation on serial interfaces. Create and customize the multilink interface. What does it take for a host to use an SSL VPN to connect to a remote network device? Customer SOFTWARE must be installed in the VPN. A VPN from site to site should be configured in advance. The web browser must be installed on the host. What information should network engineers check to see if this situation is part of normal network behavior? The network configuration of syslog records and output debugging messages captures the basic level of network performance 201. What structured principle of engineering desing ensures that network reamins are available even in abnormal conditions? flexibility of sustainability and flexibility 202. The engineering team identified a solution to a significant network problem. The proposed solution is likely to affect critical infrastructure components. What should the team follow when implementing the solution so as not to interfere with other processes and infrastructure? suslog messages and reports are one of the layered troubleshooting approaches to changing the procedures for controlling the basics of Knowledge Guidelines 203. What is a relay frame that supports the dynamic display of an IP address to DLCI? FECN Reverse ARPH ARP BECN 204. A small remote office must connect to the headquarters through a secure IPsec VPN connection. The company is implementing the Cisco Easy VPN solution. What component of Cisco Easy VPN solution should be added to the Cisco router in a remote office? Cisco AnyConnect Cisco Easy VPN Server Cisco Easy VPN Remote Cisco VPN Customer 205. What scenario would require the use of static NAT? when an internal corporate web server should be available from the home network, when there are more internal private IP addresses than available public IP addresses, when all public IP addresses have been exhausted when IPv4 connects to IPv6 206. The organization purchased Frame Relay from a supplier. The service agreement indicates that the access rate is 512 kbps, cir is 384 kbps and bc is 32 kbps. What happens when a customer sends a short spike above 450 kbps? The frames are marked with a BIT of DE set on 1, and are likely redirected. The footage is marked with a 0-bit DE and is likely redirected. The frames are marked with a 0-set DE bit and are allowed to pass. The footage is marked with a BIT of DE set on 1, and is likely deleted. What is Frame Relay that supports dynamic IP address mapping to DLCI? Reverse ARP- ARP BECN FECN 208. The administrator wants to set up the router so that users of the external network can set http-connections to the internal website only by navigating the . What function will the administrator set up to achieve this goal? the port's overloading dynamic congestion NAT NAT static NAT PAT 209. What two components are needed to ensure that DSL is connected to SOHO? (Choose two.) PPPoE included the CMTS transceiver CM DSLAM 210 switch. Network engineer troubleshooting a failed PPP multilink connection between the two routers. This multilink interface was created and assigned to the number, the interface was enabled for the PPP multilink, and the interface was assigned to a multi-line group number that corresponded to the group assigned to the member of the physical serial interfaces. Physical serial interfaces have also been included for PPP multilinks. What additional command should be given on the multilink interface? 4000,000 - encapsulation of the ppp ip address 192.168.10.1 255.255.255.252 is not ip address 211. What is the international standard for cable-related technologies? What three describe the characteristics converged corporate network architecture? Server applications are placed in a fistic corporate network. The networks are limitless. 213. What is the ineffective feature of time multiplexing that the statistical TDM overcomes? unused high-speed data buffer buffering time intervals during peak periods use multiplexer on transmitter and receiver 214. What are the three characteristics of a VPN SSL? Authentication can be one way of authenticating uses common secret or digital cerificates' ssl vpn supports web applications, email and file-sharing connections can challenge non-technical encryption users requiring key lengths from 40 bits to 256 bits of ssl vpn requires a specific PC configuration to connect 215. The network engineer designs IPsec VPN between Cisco routers for the national bank. Which algorithm provides the highest level of data privacy when crossing a VPN? 256bit AES 512 bit RSA SHA-1 3DES 216. With the sequence numbers, which IPsec security function prevents spoofing by checking that each package is not duplicated and unique? 217 Data Authentication Protection. A small law firm wants to connect to the Internet at a relatively high speed, but with low cost. In addition, the firm prefers that the connection was through a special link to the service provider. What type of connection should I choose? ISDN DSL 218. How can an administrator set up a Cisco Easy VPN server so that the company can effectively manage many remote VPN connections? by regularly updating the client's software by preconfiguring IPsec settings when deploying a client solution by providing dedicated bandwidth for VPN connections by pressing IPsec security policies on customers while building Tunnel 219. How does the AIA improve the efficiency of telework? It provides wireless data transmission to large urban areas. Provides high-speed connections on copper wires. It provides better service to VoIP apps and video conferencing. What two networking technologies allow businesses to use the Internet, rather than WAN, to secure their distributed networks? (Choose two.) DSL remote LANs remote access VPN site to VPN Site Frame Relay 221. What are the two benefits of using SNMP traps? (Choose two.) They eliminate the need for some periodic survey requests. They can passively listen to the exported NetFlow They restrict access only to control systems. 222. The Network Engineer released a serial interface show 0/0/0 command on the router to examine the team's output show that the encapsulation is PPP and that the LCP is open. However, the IPV6CP NCP does not appear as open. What does an engineer have to set up to open an IPV6CP NCP link? Set up an IPv6 address on each interface here. Give the compression predictor command on each interface by clicking. Set up CHAP authentication on each router. Which address translation is static NAT? The internal local address is transferred to the listed global address Internal local address is transferred to the specified external local address The Internal Local Address is transferred to the specified external global address External Local Address translated to the specified external global address 224. What are the two benefits of using IPv4 NAT? (Choose two.) provides consistent traceability when you need to address internal corporate network issues, retains public IP addresses, and ensures consistency in the development of an internal enterprise IP-addressing scheme, allowing you to maintain a permanent solution to the 225 network performance problem. Which network design module doesn't usually connect to the edge of the service provider? Remote access and VPN - E-Commerce Enterprise Branch WAN Site-to-site VPN 226. Which two types of devices are specific to wan-environments and not found ona LAN? (Choose two.) The distribution layer of the Broadband modem router Main Switch Access to the switch CSU/DSU 227. What is the plausible reason that an employee will become a TV worker for the company? to become busy without having to share files or resources to become employed in the traditional workplace, to keep a job during rehabilitation, to keep the job without having to comply with the rules of company No. 228. Connecting offices in different locations using the Internet can be business-efficient. What are the two important business policy issues that should be addressed when using the Internet for this purpose? (Choose two.) Wan security bandwidth troubleshooting privacy solution 229. A technician at a remote router troubleshooting location and emailed a partial exit from the network engineer's debugging team at the central office. The message received by the engineer contains only a number of LCP messages that relate to the serial interface. What WAN protocol is used on the link? HDLC VPN Frame Relay PPP 230. What is a physical feature that is WAN links? Point links are usually the least expensive type of WAN access. The MAC address is not used in the address area of the current to the point of the frame. layer (layer OSI 3) . WAN services switch from point to point in a diagram. What PPP protocol allows the device to specify an IP address for routing via PPP? Which two statements describe the benefits of NAT? (Choose two.) NAT simplifies troubleshooting, eliminating the eventual need for traceability. NAT can provide multiplexing of the port level of apps to preserve public IP addresses. NAT makes tunneling protocols, such as IPsec, more efficient by changing addresses in paddocks. NAT provides package filtering features similar to the firewall. What is one of the drawbacks of using the top-down troubleshooting method? trying to decide which device to check first the number of documents that are generated you need to check each device and interface on the network and document their need to check all possible application problems and document it 234. What three features does syslog provide? (Choose three.) specify the destination of the captured messages to provide traffic analysis to collect registration information for monitoring and troubleshooting, to select the type of registration information that is captured to periodically swell agents for data to provide statistics on packages that pass through the Cisco 235 device. What two types of hardware are needed to send digital modem signals upstream and downstream via cable system? (Choose two.) DSLAM CMTS' transiver microfilter cable modem No. 236. What are the two advantages associated with Frame Relay WAN technology compared to rented lines? (Choose two.) Dedicated data transfer path between sites Fixed and allocated capacity Flexibility Globally unique DLCI for each site Cost effectiness 237. What statement describes the advantage of deploying a Cisco SSL VPN solution rather than a Cisco Easy VPN solution? It provides a stronger authentication mechanism. It provides greater access to network services. It provides a stronger encryption algorithm. It supports access to remote access without customers.
