Case files neurology 2nd edition pdf free download

54 cases with USMLE-style questions help you master basic skills to excel on the clerkship and ace the exam rack Clinical pearls highlight key points Primer teaches you how to approach clinical problems Proven learning system maximizes your exam scores We appreciate all the good reviews and suggestions from the many medical students over the past 3 years. Your positive reception was an incredible encouragement, especially in light of the short life of the Case Files series. In this second edition of Case Files: Neurology, the basic form of the book has been preserved. Improvements have been made to update many of the chapters. New cases include the infant disc, optic neuritis, multiple sclerosis, and febrile seizures. We looked at clinical scenarios to improve them. However, their real-life presentations formed after the actual clinical experience were accurate and didatic. Multiple choice questions have been carefully reviewed and rewritten to ensure they comply with the National Council and USMLE format. Through this second edition, we hope that the reader will continue to enjoy the diagnosis and management of learning through simulated clinical cases. It is certainly a privilege to be teachers for so many students, and we humbly present this edition. Sixty high-performance clinical cases focus on key abilities for clerkship neurology. Each case includes an extensive discussion, definitions of the basic terms, pearls, and USMLE-format review questions. It's an interactive learning system that helps you learn instead of just memorizing. Featuring: 60 cases of neurology with full discussions and Q&A review A Clinical Pearls highlight Primer's key points on how to approach the patient Helps you learn within real patientsUpdated to reflect the latest clerkship guidelines and changes in the core curriculum Section I. How to approach approach ProblemsYingo 1. Patient's Section 2 approach. Approach to Clinical Problem SolvingPart 3. ReadingSectin II approach. Clinical casesFifty-Four case scenariosSection III. List of CasesListing by Case NumberListing by DisorderIndex Reviewer: Joseph I Sirven, MD (Mayo Clinic Arizona)Description: This is the second edition of the self-assessment review of neurology that uses clinical vignettes to help medical students who take national boards and USMLE exams. Purpose: The book is intended to help medical students and, perhaps, residents and fellows with a basic overview of neurology delivered in a case based on the question form that mimics standardized exams. This is an important contribution in the field as neurology is a discipline that all medical professionals will deal with one way or another. Audience: Written for medical students, the cases reflect this level of sophistication. The authors reflect a wide range of both general and subspeci specific knowledge. Features: The book is divided into three sections: 1) how to approach clinical problems; 2) clinical cases; and 3) a list of cases by both number and disorder. The book is filled with amazing paintings, elements, and easy-to-understand clinical pearls. Evaluation: This is a welcome addition to the neurology review literature. Both medical students and residents and neuroscience scholars would find this study guide a welcome tool for updating their neurological knowledge. Doody Inspection Service
