(7.RP. A.1)For example, if a person walks 1/2 miles in every 1/4 hour, calculate the unit rate as the complex fraction 1/2/1/4 miles per hour, equivalently to 2 miles per hour. Rate problems with fractions 4.1 I can recognize and represent a proportion as a declaration of equality between two ratios. (7.RP. A.2) 7.RP. A.2 (5 Practice Items) 4.3 I can analyze two relationships to determine if they are proportional to each other with a variety of strategies (e.g. using tables, graphics, or images). (7.RP. A.2a) Identifying proportional relationships identifying proportional relationships with 4.4 charts can identify the proportionality constant (unit rate) in tables, charts, equations, diagrams and verbal descriptions of proportional relationships. (7.RP.2b) Type problems with 4.5 fractions I can explain what the points of a graph of a proportional relationship mean in terms of a specific situation and recognize what (0.0) and (1.r) in a chart represents, where the unit rate are. (7.RP. A.2d) Interpreting proportional relationship charts 4.6 I can apply proportional reasoning to solve problems multipass and percentage ratio (e.g.: simple interest, taxes, markups, markups, gratuities, fees, fees, percentage increase decrease or percentage of errors). (7.RP. A.3) 7.RP. A.3 (5 Practice Elements) Elements)
