Honeywell xnx gas detector manual

The advantage of Honeywell XNX is the advantage of an easy-to-use, low-maintenance universal platform that works with other safety equipment on a digital bus system, including Honeywell Analytics' proprietary Searchline Excel, Optima or other gas detectors, industry-standard PLCs, and third-party gas monitoring controllers. Honeywell XNX supports electrochemical, infrared and catalytic bead gas monitors and uses standard 4-20mA wiring and HART; options include Modbus, Fieldbus (pending) up to three relays and a local Heart Adapter for configuration and diagnostics using existing HART handheld devices. With more than 200 unique configurations, XNX meets the intrinsically safe, explosion-proof requirements of Class 1/Class 2 in upstream/downstream oil, chemical, wastewater and other industries. The case is available in stainless steel or aluminum, with a marine-grade coating. Five threaded ports, available in metric or NPT versions, and robust mounting options provide ultimate installation flexibility. Instrumentation built on various detection technologies can be attached locally to the transmitter or remotely with the right accessories This library contains the following Honeywell XNX Universal Transmitter Gas Detector Manuals with downloadable links.
