## Metric conversion ladder pdf

Updated on April 24, 2017 By accident E. Gartneer Although the conversion between standard forms of measurement in metric forms can be a bit daunting, conversion within the metric system is much easier. The classification of metric system units is created by making numerical prefixes on unit names. For example, a different number of meters can be indicated as kilometers or centimeters, each term means a certain amount of the original unit. Using the ladder method with metric conversion is an easy way to get the different metric classifications. Find your starting point. The starting point will invariably be the placement of the decimal in the number. For example, if you were to convert 5.5 meters, the starting point is decimal placement. Calculates the number of jumps. The number of jumps is the amount of digits required to move the decimal to get the correct conversion. Since the categorization of the metric system is based on powers of 10, any increase or decrease in unit measurement is a single jump. For example, converting meters into centimeters is a difference of 100 or 10 at the second power. Therefore, the number of jumps is the value of the change exponent, which is two for the example. Move the decimal place by the number of jumps. If you convert an amount to a higher classification, you move the decimal place to the left. If you're converting the amount to a lower rating, you'll move the decimal place to the right. For example, converting 5.5 meters to centimeters means that you are converting from a larger classification to a smaller classification, and then moving the decimal place to the right. For example, 5.5 meters will have its decimal place moved 2 positions to the right to create 550 centimeters. About author Chance E. Gartneer began writing professionally in 2008 working in collaboration with FEMA. It has the unofficial record for the most college hours at the University of Texas at Austin. When not working on his children's book masterpiece, he writes educational pieces focused on early mathematics and ESL topics.
