How many combinations with 3 numbers 1-9

Hi Mike. If an order is important, we will say choose the first number (10 options), then the second (9 options) then the third (8 options). So there will be $10 \times 9 \times 8 = 720$ possible options. But because orders don't matter, we need to keep the tired as you mentioned. How many twists are there for each set of three numbers? Well, again, we can choose one of the first three, so there are 3 options for that, then 2 options for the second digits, then 1 option for the last digits. There are, you see, $3 \times 2 \times 1 = 6$ ways that might organize triple digits. Therefore, in that set of 720 possibilities, each unique three-digit combination is represented 6 times. So we're just divided by 6. $720 / 6 = 120$. That's your answer. This is what is called a combination. You can use a formula that involves factors to determine the number of combinations. In this case, we say this is 10 Pick 3 and write it as $10C3$. This means that from a set of ten (digits in this case), select 3 regardless of the command. The formula for nCm is $nCm = n! / [m! \times (n-m)!]$ So in your question, we have $10C3 = 10! / [3! \times (10-3)!] = 10! / [3! 7!] = (10 \times 9 \times 8 \times 7!) / [(3 \times 2 \times 1) 7!] = (720) / 6 \dots$ because $7!$ at the top and bottom cancel. = 120 as we expected. For more information about their Confederations and close cousins Permute (where order matters), find these words in our Quick Search. Cheers, Steve La Rocque. Let's say you have a few specific things or objects. They can be numbers, letters, people, colors, etc. In how many different ways can these things be arranged in a row? The refinement of some objects means the accumulation of all possible orders of the object. Enter your object (or their names), one per line in the box below, then click Show me! to see how much they can be arranged, and what arrangement it is. Note: 8 items have a total of 40,320 different combinations. For the sake of output and server capacity, we can't let you insert more than 8 items! This JavaScript produces all 120 affiliates.out=[]; to (i=0;i<8;i++) to (j=i+1;j<9;j++) to (k=j+1;k<10;k++) out.push('+i+j+k'); out.join(' '); Each loop starts from either \$0 or one after the previous loop, and continues as far as it can go allowing another loop. "+i+j+k is a string in JavaScript, so the output is: \$012, 013, 014, 015, 016, 017, 018, 019, 023, 024, 025, 026, 027, 028, 029, 035, 036, 037, 038, 039, 045, 046, 047, 048, 049, 056, 057, 058, 059, 067, 068, 069, 078, 079, 079, 3 124, 125, 126, 127, 128, 129, 134, 135, 136, 137, 138, 139, 145, 146, 147, 148, 149, 156, 157, 158, 159, 167, 168, 169, 178, 189, 234, 235, 236, 237, 238, 239, 245, 246, 247, 249, 256, 257, 258, 259, 267, 268, 269, 278, 279, 289, 345, 346, 347, 348, 349, 356, 357, 358, 359, 367, 368, 369, 378, 379, 389, 456, 457, 458, 459, 459, 468, 469, 478, 479, 489, 567, 568, 569, 578, 579, 589, 678, 679, 689, 789 I had a combo that listed a combined number at 6 length but he stopped at 4-5-6-7-8-9. I need it to go ahead and stop when the first lane reaches 9. I have tried many ways but was unable to solve the problem. invalid static Main() { Console.WriteLine(); var n = int.Parse(Console.ReadLine()); Console.WriteLine(k); var k = int.Parse(Console.ReadLine()); foreach (var combo in Merge(k, n)) { Console.WriteLine(burst.Include(combo)); } Console.ReadLine(); combination of IEnumerable<int> burst { int k, int n { var decision = new int[k]; var hoard = heap<int>(); hoard.Reject(1); while (heaps.Approximate(0) { Var index = hoard.Approximately - 1; var value = hoard.Pop(); whereas (index <= n) { result[index++] = value++; stack.Push(value); if (index == k) { yield return result; break; } } } The calculation uses the binomial coefficient: $\binom{n}{k} = \frac{n!}{k!(n-k)!}$ Combinations uses calculus of factorials (the exclamation mark: !). 3 choose 2 = 3 combinations(1,2)(1,3)(2,3)4 choose 2 = 6 combinations(1,2)(1,3)(1,4)(2,3)(2,4)(3,4)5 choose 2 = 10 combinations(1,2)(1,3)(1,4)(1,5)(2,3)(2,4)(2,5)(3,4)(3,5)(4,5)6
