Since 1999 we have been a low voltage connection supply leader in cables, connectors, tools and other networking hardware; we perform networking and wiring products of proven brands such as AFL, Corning, Dynacom, 3M, etc. to get the best products available at discount low voltage. With handling fees and 24-hour online orders, everyone from contractors to homeowners can get low voltage cables and accessories that suit their needs. Need a Cat5 cable to set up a large office network? Looking for a 25-foot HDMI cable, a pre-terminated fiber optic cable? Discount-Low-Voltage.com has it all. We carry thousands of products for both wiring professionals and enthusiasts. There are solutions for everything from bulk switch plates to wholesale network cables that can be pre-shut down for you in cable warehouses. Discount tools Help you shop stores to install, troubleshoot, and certify performance cheaply and professionally. Availability (We stand behind all our guaranteed products, they are items on stock ships within 1 business day, so you can use new keystone jacks, rack mount cable management systems or fiber optic/cable tools if necessary. VALUE One of the secrets of our ultra-low price is that our low overhead allows us to pass on our savings to you, bringing you unrivalled discounts on almost every low voltage product you can think of. The quantity discounts available for some products are: The more you buy, the more you save. Many of our products are also eligible for free shipping if they meet the minimum eligibility, meaning more storage if you choose the option. But we're not just about low prices. We carry equipment from the best names and brands in the industry to ensure the highest level of quality. We also back up the products we sell with a 100% guarantee of total satisfaction. Resources We put customer service first because we want to earn your business time and time again. We offer professional low voltage cable advice and order support by free phone and email. Our educational DLV blog and YouTube channel are constantly updated. Check back regularly for product tutorials, installation guides, and other tips. Follow us on Facebook as well. In addition to providing descriptions and specifications, many product pages on our website contain informative videos to take a closer look at a particular product. You can also download data sheets, installation instructions, and manufacturer's materials from this page. With nearly 20 years of experience in low voltage supply, we have choice, knowledge and availability in any situation. Discount low voltage cables, accessories, tools, hardware and much more, who better to be Discount-Low-Voltage.com a company called 2016? Our name says it all - networking, communication and other low voltage equipment you need at a price you can afford. Search our selection or call us today for free. When it comes to setting up your own lights for poorFair, you may be confused about the steps it takes to do your job safely. Let's start with the basics. One of the simplest types of lighting is low voltage. This type of lighting is suitable not only for landscaping projects, but also for many others. Low voltage and soft lighting tones are more suitable for outdoor use. Whatever you want to use for them, the best low voltage horizontals etc. have some key qualities. Read on to understand what to look for in lighting before your next project. How to choose landscape lighting? If you're set up when using low-voltage street lights, here are some tips you can follow to get the best type. First, understand the purpose of lighting. Landscape lighting is usually available as floodlights, spotlights, or path lighting. Depending on what you want to illuminate, you can purchase different models. First, look at the floodlights. This type of light can shine on large sections in one movement. This is best if you want to focus or illuminate a large area. Spotlights are slightly different because they focus only on certain small areas. The area is usually less than 45 degrees wide, so the lighting is intense. Path lights or sidewalk lights are clearly used to illuminate stairs or sidewalks. These Dull in their tones, they do not light up large areas well. But they get the job done when you need to light up the garden path at night. The type of light you choose also depends on the aesthetics you are trying to achieve. If you want to make a bold statement or focus on a specific part of your backyard, high beams or floodlights work best. If you want something subtle and don't want a specific look, you can use a path light. After you define the purpose of the lighting, you can explore the actual model. There are several types of landscape lighting. You can choose LED, fluorescent or halogen lighting as needed. It's also important to remember your budget at this point. LED lights run for longer hours, but they are also the most expensive lights in the herd. Fluorescent and halogen lighting are cheaper, but need to be changed frequently. 12 The best low voltage horizontal lights are easy to think of as all low voltage lights are the same, but there are some important differences. Different brands and models offer different specifications and details. Here are some of the best models of street light lighting you can try: Best Low Voltage Landscape Light Review 1. ZUCKEO LED LANDSCAPE LOW VOLTAGE GARDEN AISLE LIGHTING START WITH ZHUKIO LED STREET LIGHTS. These color-changing lights have a lot to offer the user. Perfect if you want to crowd please or host a party in your backyard. The installation process for this brand is very simple. All you have to do is stick planting spikes on the ground and make sure you have a firm hold. It is also waterproof, so that the wires do not overheat or destroy. Since this is a spotlight design, it can be rotated and has variations on the degree angle. An adjustable head allows you to change the light in any direction you want. If you put it on high ground, like a fence or wall, it works well. The biggest advantage of Jukeo LED street lights is that they have a 12-month warranty. There is also a three-month return policy without question. It is definitely one of the cheaper options on the added security list. 2. Super large LED street light Low voltage next product is super large LED street light. This product works well, not only for security measures, but also for sequins. It is served with 6 lights with 850 lumens per one. You can use this as a floodlight or as a focus light. This is a very safe street light to use as it has 12 volts. The main body and its wires are waterproof to the three, making them weather resistant to all weather conditions. The only problem with this setting is that it does not contain voltage transformers. You will have to buy it separately, which will add to the cost. The super large LED street light is adjustable very much, too. You can turn the angle. Installation is also a breeze, because the product must be firmly fixed to the ground. For the price, this is a reasonable item. It is one of the most expensive products, but it is one of the cheapest. There is also no mention of warranty or return policies. If it's something you need, you're need to check for something else. 3. Let's say meikee LED street lights want a product that focuses only on aisle lighting. Meiki LED street lights can do the trick for you. At 800 lumens, it is very bright and nice for lighting patios or trails. This works with a 12V or 24V operating voltage because it is a low voltage street light. This is another product that requires the purchase of voltage transformers separately. There are also no additional colors or light patterns. Colorful lighting can add excitement and fun to your backyard. It is not necessary, but still adds a touch of something good. As long as protection goes, this is a top-notch product. The thick aluminum body makes it suitable for all types of weather. With this product, you don't have to worry about overheating. As for pricing, this is a pretty standard item. You can find multiple products in the same price range as this one. All in all, the Meiki LED street lights are good to begin with. 4. Sunriver LED Landscape Lighting Low Voltage Outdoor Spotlight If you want a soft product, sunriver LED street light is perfect for you. These lights are for decoration. So, they have much softer white light than other products. Most low voltage lights are 12V or 24V compatible. This lighting is great if you want to create a warm atmosphere. It can be used alone or with stronger, brighter lighting. When it comes to quality, this product is made from the finest materials. They are made of cast and aircraft grade aluminum. You don't have to worry about messing up your light, as the rain is waterproof. The glass is great and you don't get yellow or old and you get mycobacterium. Glass for lenses is resistant to high temperatures and high impacts. There's also a lifetime warranty, something you don't see in many lights. Returns can be made without question within 3 months. Sunriver LED landscape lighting products seem like a good place to start, but they are still a bit pricey. 5. GreenClick LED outdoor low voltage horizontal light is the following items are GreenClick LED outdoor spotlights. This product has four products connected to one long cable. All you have to do is connect it to make the installation very simple. GreenClick LED lights display only four components. For this reason, this product is not as cost-effective as others. In addition, it has a great storage device and setup mechanism. Long extension cables allow you to place them far away. It no longer needs to be safely applied using existing wiring methods. Gone are the days when you had to use a timer to make sure the wires weren't overheating. If you only want to use lighting, not cables, you can do so. Alternatively, if you want to add more distance, you can also buy another extension cable. GreenClick LED lighting products are also well-warranted. You get 18 months of money back guarantee policy, but because of its sturdy design, you probably don't need it. 6. If you don't have a lot of room to install INNERWILL LED street light lights, you may be a worry when you need to attach a stand to the ground. However, innerwill LED streetlights are well on the way to this problem. It is very small in size and does not install on the ground. Instead, they are mounted on a small hole wall or fence on the back of the product. When the light is mounted, it is more robust than placing it on the ground. Like other lights on the list, these lights come with all the bells and whistles. There is a triple waterproof seal on every connection of the light. It also has premium grade components such as thick aluminum casting and tough lenses. They are made to maintain any pressure or shock and do not corrode or melt. The price of this product is a bit tricky because it has eight lights in a pack and can be mounted. The additional benefit of being able to mount becomes more expensive. If you don't mind paying a little extra, these lights are worth your time and money. 7. JESLED LED in ground well lit then jesled LED outdoor lighting. This product has 6 lights in one pack. The price is more expensive than others, but the light also shines brightly. The size of this light is very small, so it is suitable for aisles. You can easily install stairs to make stairs or trails rain. Their small size provides the perfect amount of light. It is easy to install, but you need a transformer to change the voltage version. This is another cost that you will have to pay if you buy this product. Transformers are not expensive, but they cost money. Jesled LED outdoor lighting comes with high-quality light chips. The average life expectancy of this chip is 30,000 hours, which is a lot of usage. One negative characteristic is that these lights need to be installed in a certain way. The process is simple, but if you are not familiar with wiring, you may need additional help. Jesled outdoor lighting comes with a 2-year warranty if there is a problem. This seems to be the real deal of outdoor landscaping supplies. 8. YGS-Tech LED Landscape Lighting We YGS-Tech LED Street Lights Select. With six lights in a pack, it's one of the cheapest on the list. There is also one bright light from the rest of the group. Its design makes the light look brighter with the help of a wide brim and reflective surface. Perfect for reaching long distances during rain or light. Speaking of rain, the YGS-Tech lights are ip65 and waterproof. This design feature provides stability for long-term outdoor use. It is a 12V product with voltage measurement. Compatible with most low voltage street light systems. The rotation mechanism of the lighthouse allows you to change it in any direction. You can focus light on specific areas or cover larger areas. You can also use this as a walkway light, but it can be too large depending on the size of the yard. The only negative part of this product is that there is no product warranty. Almost all other products have some sort of return or refund policy, but they don't. If you can live without it, this is a good light to add to your yard. 9. Hykolity Low Voltage LED Landscape Pathway Lighting In Hykolity, this low voltage garden lighting is a great way to add style to your trails or gardens. Decorated with 150 lumens and 139-degree beam angles, the lights offer a lot of coverage, while the brown/bronze finish and sleek design make it look great in front of the house. The sturdy cast aluminum design and ip65 waterproofing are strong enough to withstand rain and snow, so you don't have to worry about normal weather conditions no matter what climate you're in. In addition, they are good at dissipating heat that extends their lifespan. Thanks to the heavy-duty stake design and quick installation wire connectors, it is easy to install. LEDs are expected to last about 50,000 hours by about 23 years if run for six hours a day. It also has a 5-year warranty. 10. Sterno Home GL22627BK Paradise Low Voltage Path Lighting At Sterno Home, this light is a good choice if you are looking for something to give you a path or a walkway. It's 5.2 inches wide and 8.6 inches above the ground, the perfect size for lighting and good accents without overpowering the grass. Each light has 20 lumens and a 360-degree angle for maximum coverage. These lights are made of heavy-duty plastic that is strong and durable enough to withstand almost any weather, including rain and long-term sun exposure. It is rust-rust-1-year warranty. It is easy to install and requires no tools or maintenance. Place the fixings in the garden and clip them to the horizontal wire and you're done. Repositioning is also really easy if you change your mind about placement. 11. When it comes to Moonrays 95557 low voltage LED lighting lighting, sometimes you want more. Spotlight than ambient brilliance. If so, take a look at these two packs of light from Dalleigh. They have adjustable heads so you can put the focus right where you want. The sleek and simple design is easily designed into the landscaping. Each light is made of black, decath aluminum and is durable. It is waterproof and the glass lens cover protects it from dust and dust. When this light is installed, it is only about 4 inches above ground level, allowing you to make the necessary adjustments without being too disturbed by the lighting. These 1-watt LED bulbs are expected to last approximately 100,000 hours and the lights themselves are covered by a one-year limited warranty. 12. LEONLITE Low Voltage LED Street Lights If you are looking for a low voltage garden lighting set with a lot of flexibility, this lighting may be the right set for you. Choose from 6 to 12 bright colors, including cool white, warm white, and daylight, and three bright colors. The simple style of these lights makes them a great accent along the path, flowers and even in front of the house. Made of a robust, corrosion-resistant aluminum housing, it effectively dissipates heat, extending its lifespan as much as possible. Installation is also quick and easy. Compatible with AC and DV 12V low voltages, the LED has an estimated lifespan of 50,000 hours. It also has a 5-year warranty. How to install low voltage street light lighting? There are a few things to do before installing low-voltage outdoor lighting. The first method to consider is the current settings. Understanding what you already have in place gives you a good foundation. You must make sure that you already have lighting fixtures installed. You also need to find new fixtures or connections for the results you want. Record the ports or cables needed for future lighting. Many of the new homes in residential areas have outdoor lighting sources on the side of the house. If you don't have a default setting like this, you need to hire an electrician to find one. This makes it easier and safer to find the electric circle. After you know what you're working on, you can proceed with the lighting installation. If you are setting up aisle lighting, it is better to place the lights where they need to go. Don't connect yet. Just put it down. Usually, it is best to keep them 8 feet apart from receiving 10 feet. You also want to put the first 10 feet of equipment in a transformer or power source. If you are lining up lights, use a 14-age cable for lighting systems up to 200 wt. If you have more than 200 watts, use a 12-age system. When you arrive at an obstacle during lining, it is best for strings. around or under the cable. Do not go through shrubs or fences. Next, it's time to prepare the ground for outdoor lighting. Start by digging a 3-inch trench next to the walkway where the lights will go. This is where you are going to place the electrical cable. Once you have dug the area, keep that soil. When you install the lights, you will place them again. Now, when it takes time, install the pressurer and make an electrical connection. This is where you may need the help of electricity. If you are not familiar with how to set up a transformer, you may need to ask for help. Different models and different products have different transformers attached to them. Either way, the transformer and lighting system must be attached to the power source. Once the electrical wiring is aligned, start digging a hole in the stand. When you make a hole, you just have to dig about 2-3 inches where the steak should be. Once the hole is created, it's ready to put everything back where it belongs. Start by putting wires in a 3-inch trench with dugouts. Next, place it where the light stands in the hole it belongs to. Cover everything with dust that has been pulled out before. Before covering the lights, make sure they are properly connected to the electrical source. If the hole is too deep, it will be tricky to get through the electricity. If everything is in place and knocked down lightly, it is better to move on to the garden hose. Adding a little water allows the soil to mix together and become firmer. You also need to change the old bulb or fusion wire as soon as you find out. Storing too long also reduces the life of the remaining bulbs. How to test low voltage horizontal light? If your electrical and lighting system has been running for a few weeks, it's a good place to keep checking. This lets you know that the product is working as expected. First, a bolt system and a sim meter are required for testing. There are two areas to look at during testing: transformers and lighting. If you are testing a transformer, start by looking for the device. Place the boltmeter head on one output lead of the transformer. Do the same with other tips. The number displayed is the amount of voltage you currently have. Take the sim meter and close one of the transformer's leads. Please note the number again. This number is the number of amplifiers taken from that lead. Compare this number with the user's guide for the transformer. If they are lower than they should be, the problem is with the transformer itself. If you are testing lighting, the methods are slightly different. First, remove the bulb from the socket you are testing. Test the socket with the bolt system, Note the given bolt. Next, put the bulb back in its place. Take a rock system and connect it to one of the leads that power the facility. This is the number of amphibious acids. Again, compare this to the manual. If it is too low, it means that there is a problem between the transformer and this light. In this way, you can perform routine check-ups on the system. This allows you to know weak lighting or transformers before they become a bigger problem. Installing outdoor lighting Can be tricky, but it's actually very simple. Understanding the different parts of the process makes it easy to put them together. It is also helpful to maintain a user guide for the product. Outdoor lighting gives your yard a sophisticated and sophisticated look. It also increases your curb appeal, not to mention increasing your yard security. Low voltage landscape light is definitely a project you should try.
