Professionals for women's health

Women's health is an extremely important topic in the world of medicine today. There are doctors who specialize in women's health and related topics. There are many specializations that doctors offer women, they grow rapidly. For example, mammography, gynecology and reproductive health are fully targeted at women. Even fields such as nutrition science and radiology offer some services specifically for women. While it may seem like a niche topic for some, concerns about women's overall health are booming. Factly Health offers women's health news articles written in an accessible and easy-to-digest format. Some diseases and infections are certain symptoms in women that may not occur in others. Even a heart attack can be felt in women than in men. Your health is important to you and we know that. For more information about all the things we just mentioned, such as mammograms, check out our channel. Read about everything from natural home remedies to diet and exercise tips to help you stay on top of your game. Articles on women's health focus on women's specific health needs. Find information about health and health issues specifically targeted at women. Articles on women's overall health explore different aspects of women's care and maintenance. Find information on how to promote good health every day. Women are twice as likely as men to have multiple sclerosis, rheumatoid arthritis, migraine headaches and irritable bowel syndrome. Women experience depression twice as often as men. Migraine headaches affect 15% to 17% of women, but only 3% to 6% of men. Cellular differences between the sexes can affect the amount and type of drug needed to treat the disease. Although men have more heart attacks than women, women are more likely to die within one year of having one. More women than men die from stroke each year, even though the stroke rate among men is higher.80% of the approximately 210,000 hip fractures each year occur in women. About 20% of women who sustain a hip fracture die within the first year from complications of a fracture. The gastrointestinal tract is equally sensitive to sex: Irritable bowel syndrome affects twice as many women as men, while gastroesophageal reflux occurs in two-thirds of all pregnant women. People who are pregnant, experiencing menopause, or who are breastfeeding may need to take vitamins C, D, Calcium, and Iron. See more blog posts Knowledge is power, so get information.
