(day ago) FAAST (Power Search Tool and Assets) provides near real-time property visibility and can be used from anywhere on the internet ... The U.S. military recognized the need for the system to help redistribut and track excess inventory between subordinate units, improving logistical readiness through redistribution of these assets. To resolve the issues discussed, Ganuch Inc. put together a team of certified functional analysts, subject experts, application engineers and senior application developers to develop the FAAST software. Ganuch Inc. currently offers the software application of Power Search Tools and Assets (FAAST) Who was very successful in helping the military achieve avoidance of costs and savings in the logistical and financial arena. FAAST is a material management application and redistribution of Web-based assets. The FAAST provides overall visibility of a property book and equipment responsible for a share record. This tool is currently in use for deployment planning, disaster preparedness, and readiness. It has the ability to automate equipment redistribution, redistributive equipment management functions, and quickly generate reports with a single click. Rediscovering the equipment is easy by automatically turning the transfer and sea clearing process to the end. A custom task force can be developed and sourced through the automated system processes. The FAAST application provides multiple levels of asset visibility to equipment managers that allow users to run multi-faceted queries from lin and NSN detail level to serial number searches. Automated reports are generated for wind transfer and forwarding guidelines and distributed via e-mail, allowing for full tracking of critical items. FAAST tag line item numbers (LIN) with pending instructions to prevent replication of these operations, and different filter reports help make equipment management decisions. FAAST provides asset managers with a 'one stop' system that provides visibility into assets and equipment management capabilities. Ganuch Inc. has now developed and maintained FAAST for the U.S. Army, U.S. Army Reserve and U.S. Army National Guard. FAAST is a proprietary software application developed, owned and maintained by Ganuch Inc. No other organization is authorized or able to provide the FAAST system. Commands can acquire access and support for the system through GSA, contract number GS35F0482W or through a direct contract with Ganuch Inc. THE FAAST has supported the U.S. military since 2000 in the materials management arena. Contact faast management staff today to learn more at: FAAST@ganuch.com. This digital alternative method to the standard method of tactical unit and management center performance assessments is designed to help review the management and training obligations involved. This mobile checklist covers: plans, standards, code, regulations, referrals, job applications, performance assessors, security plan, fire prevention program, emergency preparedness, healthcare business plan, quality assurance program, project management quality assurance program, current certification standards, building codes, logistics information systems, national standard plumbing codes, and career management center training program should provide ongoing certification training. Review and record all assessment details of the management and training of a military facility. Then, send, share and save your findings with cloud GoCarvas. 07/2011 Current Logistics Management (LMS) What are you doing? Ft BraggU.S. Army Reserve Orders:0346 Salary Plan: GS-12 Employment Status: Full-time / 40 hours per week.07/2009 to 07/2011LMS Trainee Developments Ft McPherson / Ft Bragg USA. Reserve Service:0346 Salary Plan: GS-7/9/11 Employment Status: Full hour / 40 hours per week Initially participated in a 3 1/2-month training course, which teaches the Army Logistics Interns Department (ILOG). ILOG served as an introduction to military cultural and logistics processes. Successfully completed the ILOG and underwent developmental training within USARC's G-4. The training was installed in 6 months in rounds within each branch of the G-4. The first round was in the Hunters Brigade, where I worked on a number of projects such as tracking subordinate units on offender transfers and closures, along with closing completed guidelines. With the assistance of a new equipment field at Ogden Utah.Coordinated with units to collect new equipment and secure paperwork was properly filled. The second round was in the G-4 operations chamber. During my time in operations I was in charge of briefing units at a joint evaluation conference on the current status of their reserve equipment lists and gave them an overview of operational needs statements, equipment sourcing documents and a joint operating image program of equipment. Function as an AR G-4 representative during team assistant visits to OFTS commands. During these visits I employed the staff during the G-4 portion of the SAV when questions were raised about metrics presented. The third round was in the supply industry.Created an Excel spreadsheet from the Logistics Analysis Data Tool (LOGDAT) that included all enterprise clothing and personal equipment (OCIE) that must be transferred from equipment concentration sites to major facilities.This illustrated the level of compliance achieved by units within the army's reserve fourth and final round was with the Standard Logistics Army Management Information Systems (STAMIS) branch. Created a workbook analyzing STAMIS Engineering Command LINs.This. This included pulling data from LOGDAT and FAAST and then analyzing the data to determine excess and shortages. Briefed units from the command of their current STAMIS equipment (Cont'd) coordinated to fill shortages and cross-level LINs utilizing FAAST and PBUSE to improve readiness.01/2000 to 12/2007Division ManagerGASupervised up to 23 employees and managed all relevant aspects such as: scheduled working hours, Resolved disputes, resolute salaries, and awarding awards for the exceptional Designed and produced a lawn maintenance team leader's guide to educate and train employees in all aspects of lawn maintenance and ensure a standard level of service and knowledge from verb to team leader. Held monthly team leader meetings, briefed team leaders and leadership on the company's performance and lawn maintenance Division.In an effort to create a more educated and professional environment I created an open plan for all employees within the company to take the Georgia State Category 24 pest license test. This test covered a variety of issues related to plants, insects and pesticides and served as points of sale to customers whose staff was professional and state-certified. I'm calling study sessions with managers, team leaders, and work that were interested in pursuing this opportunity. To motivate employees to take the test I could offer a \$100 bonus and a paid day off. The result of the initiative was 100% of the mountains and 80% of our team leaders to reach accreditation. Sold over a quarter of a million dollars in lawn maintenance accounts in contracts in 2006, which include commercial properties, apartments and residences. Compliance with contracts is guaranteed by checking completed points at work, meeting with asset managers and the landlord's two weeks and two weeks. Performed daily sales, complaints, and staff issues.Completely restructuring the lawn maintenance division to increase productivity and quality of work by increasing the frequency of scheduled visits and establishing regular routes for team leaders. The result was a decrease in contract cancellations by more than 50% and a decrease in customer complaints. Senior Functional Specialist/Commodities Manager Equipment Management and Data Analysis is responsible for logistics management operations related to \$1.6B of Army Reserve Equipment (AR) which includes a total of 142 line item numbers (LINs). Equipment management for AR includes all engineer equipment, most heavy tactical vehicle fleet wheels and all monitored vehicles. Management includes analysis and evaluation of statistical narrative data that will include project assignments including materiel concepts, development technology, cost analysis, Variables affecting inventory, asset accountability, supply plans, maintenance, warehouse rebuilding, re-capitalization plans, and supply data systems review service, automated equipment and equipment at hand (EOH) certifications to determine and initiate the operations needed to redistribute and across equipment according to a different organization and equipment table (MTOE) or distribution table and allowances (TDA) to improve readiness and ensure that units are equipped to perform tasks and deployments. Working with a modernization branch of power to equip units for their army (Cont'd) Demands and levels of regeneration of the military forces (ARFORGEN). Represent the AR G-4 and cooperate with the Army Headquarters (HQDA), Military Materiel Command (AMC), Tank-Vehicle Armaments Command (TACOM) and other large and subordinate commands. Develop, review and implement guidelines, programs, policy, programs, procedures and techniques affecting distribution, redistribution, cross-development, inventory management, supply, maintenance, readiness and character. Set up replacements/in Lieu-Of (ILO) relationships based on supply board 700-20 Appendix H, basis of issuance plans (BOIPs) and other guidance. Develop pivot tables together with a macro in Microsoft Excel to manage and track equipment through its lifecycle. Utilized data systems are Asset Tools and Power Search (FAAST), Enhanced Supply Asset Book Unit (PBUSE), Power Management System (FMSWEB) website, Army Hunter Enterprise System (AE2S), Army Global Combat Support Systems (GCSS-A), Logistics Information Warehouse (LIW) and Lead Material Integrator Decision Support Tool (LMI) (DST). Created over 3000+ guidelines providing nature for \$127M of AR equipment that is excess, on divestiture programs, or not cost-effective for repair. The deployment is provided through FAAST and DST. The effect of eliminating excess positively affects AR in multiple ways such as eliminating unnecessary maintenance and storage costs. Created over 1000+ character provision guidelines for realignment and cross-disintegration of \$83M of AR equipment. Realignment and cross-organizing are based on ARFORGEN, readiness and priority. Realignment and crossover positively affect unit readiness and enable the unit to effectively perform their mission. Serve as a Super-User AR for the launch of the Lead Integrator (LMI) Logistics Program Decision Support Tool (DST) which can be found in LIW. Assistance and provided input for AR shares in the developmental stages of DST. Create proposed sourcing decisions (PSDs) in DST to redistribut equipment outside ar. Work directly with TACOM item managers and Home Front Command Lifecycle Managers (ASC) for equipment deployment. Broker and provide solutions for standard military retail supply service (SARRS) operators with gaps between FAAST PSDs.Function guidelines as an expert on the subject and provide hands on training to assist co-workers within the distribution industry to equip and associates in other divisions. During logistical reviews of command in operational, functional, training and support orders (OFTS) 1 guide and train the local logistics G-4 on the capabilities of a clock and provide hands on training. Participate in the International Bi-Weekly Distribution Review Conference (DRB) hosted by AMC as needed to represent the AR G-4 in a priority review In charge of DRB discussions and notify commodity managers of all necessary actions. Work with the maintenance industry to determine the best policies and procedures (Cont'd) for the technical testing requirement for the reserve, as required by ASC. In helping to create the Army Reserve Equipment Policy Memorandum (07JUN2012) and the second bitterness (dated 23JUN2014) which changed the way the equip brigade and subordinate OFTS commands manage equipment. Proposed policy changes based on AR logistics programs and processes to ensure mission instructions. Expertise and input have been requested and used many

times by the manager of the hunter division and the main equipment distribution industry.Placed and held multiple departments for colleagues in the equipment distribution industry using equipment management best practices using Pivot Tables built into Microsoft Excel using data pulled from FMSWEB, click through and FAAST. Using Pivot Tables saves up to 12+ hours of work when you create a detailed analysis of equipment compared to previous methods. Saved army reserve \$83.6 million after analysis of memorandum targets plan FY-16 Depot rebuild (POM). It was determined that based on the activity of modernization power and support from the Army's Item Managers Department, a number of programs could be completely eliminated without any harm to the military's readiness or reserve capabilities. A function as a representative of the Equip Division during logistics review programs and a command is hosted throughout the United States at the OFTS command headquarters and are subject to various. Meet with ofTS G-4's logistics team and provide guidance as needed on logistics processes and make sure that procedures are in place to manage equipment according to army regulations and the army's reserve equipment policy memo.Provide an overview of pressure through and assist the logistics team in its use. Once the review is complete, the General Command will be briefed on the outcome of the visit to include equipment management, metrics and statistics. Designed and directed by a large number of expanded heavy tactical truck mobility (HEMTT) RECAP programs with a combined value of \$66 million. Management included locating available candidates within the AR for induction, providing deployment and coordinating the return shipment along with setting up new equipment training. As a HEMTT RECAP program manager I brokered and solved all problems inside and outside AR, to include TACOM and OSHKOSH, the manufacturer. RECAP plans to modernize the HEMTT AR fleet into the most current model, ultimately allowing war fighters to do their jobs more efficiently and securely. After this account was transferred to the Power Modernisation branch I provided assistance and expertise to the system operator.I successfully announced the completion of two British Aerospace (BAE) and engineering M113A3 programmes 72ea Properties. as ar commodities bus I brokered and solved all problems inside and outside AR, to include TACOM and the rebuilding manufacturer, BAE. The properties were new to AR and filled a critical shortage of items for 43 units. Units.
