January 202113 January 2021All-numeric date01/13/20212021-01-13Time11:58 am11:58 [refresh] date and time notation in the United States differs from that used in almost all other countries. It is inherited from a historical branch of conventions from the United Kingdom. American use, dates in the monthday-year order (e..B January 13, 2021) are written with a comma before and after the year if it is not at the end of a sentence [2] and the time in 12-hour notation (11:58). International date and time formats typically follow iso 8601 format (2021-01-13) for all numeric dates, [3] write the time with the 24-hour clock (11:58), [4] and note the date in day-month-year format (January 13, 2021). [5] These forms are increasingly common in American professional, academic, technological, military, and other internationally written in the month-day-year order, although the order of meaning does not increase or decrease. This order is expressed both in the traditional all-numeric date (e.B. 1/21/16 or 01/21/2016) and the extended form (e.B January 21, 2016 – usually spoken with the year as the cardinal number, e.B January twenty-one, twenty-sixteen), on the historical grounds that the year as the cardinal number and the day as the ordinal number in the all-numeric form is the slash (/), although the hyphen (-) and the dot (.) have also recently been created in purely numeric format due to globalization. The Chicago Manual of Style prevents authors from writing purely numeric data in this format because it is incomprehensible to readers outside the United States. [5] Since the early 1980s, the number of annual orders per day has been increasing. The month is usually written as an abbreviated name, as in 19 Jul 1942 (sometimes with hyphens). [5] Many genealogical databases and the new Customs Declaration Cards for persons entering the United States, passengers are asked to provide relevant data in the numerical format dd mm yy (e...B. 07 42). Visas and passports issued by the U.S. State Department also use the daily month order for human-readable data and the annual month day for all-numerical coding, in accordance with the standards of the International Civil Aviation Organization for Machinereadable Travel Documents. [6] [7] The Day-month-year (e.B. August 25, 2006) in written American English is becoming more and more common outside the media industry and legal documents, especially in university publications and in some internationally influenced publications as a means of dealing with ambiguities. [Quote Required] The Chicago Manual of Style recommends it for material that requires many full dates because it does not require commas. [8] Most Americans still write ininformal documents on August 25, 2006. The day-month format is still somewhat rare, except for holidays like July 4. [Quote Required] The year-month daily order, e.B. ISO 8601 YYYY-MM-DD notation, is popular in computer applications because it reduces the amount of code needed to resolve and calculate dates. It is also commonly used in software cases where there are many separately dated elements, such as documents of the U.S. from month-day-year to one-month-day can be considered less pause because it maintains the familiar month order. Two U.S. standards require the use of annual month-day formats: ANSI INCITS 30-1997 (R2008); and NIST FIPS PUB 4-2 (FIPS PUB 4-2 in the United States 2008-09-02[9]), the earliest of which can be traced back to 1968. This order is also used within the Federal Aviation Administration and the military because ambiguities need to be removed. The U.S. military typically uses the format is used for correspondence with civilians. [10] The military date notation is similar to the date notation in British English, but becomes cardinal (e.B. Nineteen July) and not ordinal (e.B. The Nineteenth of July). [Quote Required] Weeks are usually denoted by the date of a day within this week (e.B. the week of May 25) and not by a number of the month (first, second, etc.) or at the end (last and much less often penultimate). Thanksgiving, for example, is defined as the fourth Thursday in November. Some of these definitions are more complex. For example, Election Day is defined as the next Tuesday after November. usually show Sunday as the first day of the week. Time Also: Time in the United States While most countries use the 24-hour clock The United States and p.m. (often shown as AM and PM) are appended universally in written language. Alternatively, people can specify noon or midnight, after or instead of 12:00. (Business events that are increasingly scheduled with groupware calendar applications are less vulnerable to such ambiguity because the software itself can be modified to adopt naming conventions.) If the a.m. p.m. Convention is typographically inconvenient (e.B. in dense tables), sometimes using different fonts or colors instead. The most common use in transport timetables for a.m. Times and fat face for p.m. times. It is also not uncommon for AM and PM to be shortened to A and P. 24-hour use. [4] It is best known for its use by the military and is therefore commonly referred to as military time. In u.s. military operations, the 24-hour time is traditionally written without a colon (1800 instead of 6 p.m.), and the army adds the word hours after military time (e.B. eighteen hundred hours.) However, the Navy and Marine Corps do not add the word hours after the military period. The 24-hour notation is also used by astronomers, hospitals, various modes of transport, and in radio and other radio and other broadcasters behind the scenes, where programming planning must be accurate without misunderstood AM and PM. In these cases, accurate and clear temporal communication is crucial. If someone fails at 5:00 p.m. in a hospital, for example, if medication or other medical treatment is needed at a given time, the result could be critical. For example, 24-hour time (5:00 p.m., written as 5:00 p.m.) is used. Features Some style guides and most people suggest not to use a leading zero is more commonly used with 24-hour notation, especially in computer applications, because it can help maintain column alignment in tables and correct the sort order, and also because it helps highlight the 24-hour character of the specified time.) Times of day ending in :00 minutes can be pronounced as numbered hour followed by clock (e.B. 10:00, 2:00 two o'clock, 4:00 o'clock, etc.). This may be followed by the a.m. or p.m. Beweserbegeber or not, if obvious. O'clock itself can be omitted, leaving a time like four a.m or four p.m. Instead of a.m. and p.m. the times can also be described as morning, afternoon, evening or night. The minutes (except :00) can be Minutes:01 to :09 are usually pronounced as oh one to oh nine. :10 to :59 are their usual number words. For example, 9:45 a.m is usually referred to as forty-four-fifths or forty-nine a.m.. Times of day from :01 to :29 minutes after ten or seventeen after ten. :15 minutes are very often as quarters after or quarter after and:30 minutes generally half past, e.B. 4:30, half four. Time of day from :31 to :59, on the other hand, are subtractive with the words to, of, until or till indicated: 12:55 would be pronounced as five to one. :45 minutes are pronounced as five to ten or guarters to ten or sometimes quarters to ten in the morning. However, it is always acceptable to pronounce time with number words and the above-mentioned oh convention, for example 12:55 twelve fifty-five, 12:09 twelve thirty, and 12:15 twelve fifteen.
