It tells the story of a group of history students who travel to 14th-century France to save their professor. The book follows in Crichton's long history of combining science, technical details, and action in his books, this time addressing quantum and versatile theory. The novel gave rise to Timeline Computer Entertainment, a computer game developer who created the Timeline PC game published by Eidos Interactive in 2000. Additionally, an eponymous film based on the book was released in 2003. Plot In Corazon, Dan Baker and his wife are lost and driving through the northern Arizona desert when they come across a man in his seventies who looks like a priest. They pulled over to help him, then take him to a hospital in Gallup, New Mexico. They learn that the man works at ITC and has vague growth abnormalities in his blood vessels. Twenty-four hours later, the man dies. In the Dordogn (southwest) part of France, archeologist Edward Johnson leads a group of relatively young archaeologists - Chris Hughes, Kate Erickson and Andrick - as they study fourteenth-century towns Castellgaard and La Roque. Professor Johnson travels to New Mexico because he has reason to believe the ITC, their wealth provider, is guilty of foul play. During his absence, his students discovered several troubled sites, including Professor Johnson's glasses and lenses for an inexplicable message from him. A computer expert named Chris, Kate, Andre, and David Stern are whisked away to ITC headquarters in New Mexico by The Company's Vice President John Gordon. Once there, ITC CEO Robert Doniger informs them that Professor Johnson has traveled to 1357 using their unknown quantum technology. Students decide to venture in the past to save the professor. Stern chooses to stay behind, realizing that time trip is probably terrifying for a biology. Immediately when they arrive in 1357, they are attacked by knights. His ITC guard is murdered, and activates a grenade before he is seriously injured, and inadvertently begins his return, causing the return pad to be seriously damaged at present. Stern and ITC staff then struggle to repair it so students can return home. Kate and Andre find Professor Johnston; Lord of castelguard Keeping him under arrest because he is convinced Johnston knows the secret passageway to the famous castle of La Roic, commanded by Arnaut de Servole, lord Oliver's arch-nemesis, who plans to attack Lord Oliver's domain. Meanwhile, Chris inadvertently disguises a boy that he is aristocrat and the boy has been revealed to be a woman named Lady Claire in disguise. She takes Chris to Sir Guy de Malent, her fiancé. Chris and Andre (who have since found Chris) meet the man, who challenges them to a joust. Chris's proclamation of nobility and his flirtation with some women has turned him into the enemy of many men. Both escape thanks to Andre's intelligence and knowledge of the field. Oliver orders students' deaths. They flee and are followed by the boy and his knight, Robert De Kere. To keep Lord Oliver's men from chasing them, students seek the secret route to Stopping L.A. Focusing on Chris and Kate's secret passage, Andre secured entry to Castelgard by posing as Professor Johnston's assistant. Andre learns that Professor Lord Oliver is helping to build a weapon to defeat Arnaut's incoming forces, believing that Oliver lost the siege as he is perceived. At the same time, Chris learns that another future person is helping De Cervole forces. The man has revealed De Kere, who actually found Robert Deckard, an ITC worker who has undergone so many quantum leaps that his DNA is manipulated and weak, much like the seventy-year-old man's couple in Arizona at the beginning of the novel. Deckard plans to take the next trip to the future for itself. Arnat begins the siege of Castelgaard, and eventually triumphs. During the fight, Kate runs away from the man and sends him falling to his death. Andre and Chris free Professor Johnston from a basement. They see Arnaut battling Oliver, who ends with the latter being trapped in a deep pit. As part of Time Passengers, Chris is attacked by Deckard but kills him by setting him on fire with ammo supplied by Professor Johnson. Stern and ITC staff repair the machine just on time for the return of students. Andre realizes that he is longing for this life, and forbids others to return to the present without him. Currently back, the team is faced by Doniger, who had little concern for his safety, intends to exploit quantum technology for his monetary advantage. Fed up with his boss, Gordon knocks him out and uses the machine to trap him in Europe 1348, during the black plague. The novel culminated with an epilogue. Chris and Kate are now married and expecting their first child. One day when digging through a site, they come to the tomb of Andre and Lady Claire. They are happy to know that the two led a happy life together, and Andre never forgot them. Style Point of View The third person is written in the omniscient point of view. is. Many voices uses the main characters to tell their story, including those of Marek, Kate, and Chris, as well as those of younger characters, like the couple who finds a confused man wandering in the desert, and the cops who can't accept the incredible story of an old man who just wandered away from his car in the desert. The letter Andre Marek Andre Marek is a researcher who works with Professor Johnston at Dordogn. Marek is always a fascination with medieval times that is so intense that he taught himself the joust, to fight with a sword, and shoot a longbow. So, when Marek gets a chance to go through the invention of ITC in that era, he jumps at it. Marek proves himself very brave in the medieval world. He fights many soldiers, does not hesitate to take their lives; Bravely stands for medieval warlords and archprice; And the role of a knight is very convincing. No one - not even the Knights who oppose him - has doubts about him being one, perfectly deserved called Sir Andre. Eventually, Marek suggests he was meant to stay in the period. That is why he chooses to stay behind. When Professor Johnston, Kate, and Chris return to their world, they find Marek's grave and discover that he lived a happy life in that alternate universe. Kate Eriksson began her college career as an architecture student of Kate Erickson, but found it boring and stopped her majoring for history. Kate now works the Dordoggan site from the architectural perspective, checking the ruins to see how they were built and make recommendations for restoration. Kate Marek's team is part of that journey to the 14th century to save Professor Johnson. Kate repeatedly demonstrates her bravery and uses her climbing skills to outsmart period soldiers. Kate is also something of a romantic and falls in love with Chris during the adventure. Chris Hughes Chris Hughes is a student of Professor Johnston. The archeological site in Dordogon has a specialty find of Chris; He is trying to determine whether the mill was strong or not, a feature that was quite new at the time. When Johnston disappears and Marek asks Chris to be part of the team that saves him, Chris jumps at the chance. Chris is a vulnerable who often finds himself getting into tough conditions, usually something on women. When she goes past, she finds herself lying to a beautiful girl to impress her, and her lies causes her to end up having joust with her potential husband. As time passes, however, Chris proves himself more daring than he appears. In fact, he alone kills De Kere, a guy crazy enough to kill Chris' entire team. Professor Edward Johnson Professor Edward Johnston is a college professor who is in charge of the archeological site at Dordogn in France. Johnson is an inspiration to and support his students, and they admire When Johnson goes missing after traveling to New Mexico to confront the ITC CEO, his team rallies to find a way to save him. Johnston has travelled past through a different universe. He has been found by locals and has created a new personality for himself for this reason, as a magistrate who has come to help the abbot of the local monastery look for important information in his archives. In this calibre, Johnson quickly becomes something of a local legend. This has led Sir Oliver to request his help in defeating Arnaut. Johnston plays with when the moment comes when he can return home. David Stern's David Stern is a computer geek who takes a job with the Dordogon River Valley archeological site just close to where his girlfriend is attending school. When Doniger calls Marek and asks him to take his three best people to return to New Mexico, Marek Chooses Stern is part of the team. When other universes have discussed the science behind the ability to transmit people. Stern probably understands it better than anyone else and, therefore, also chooses to be the only one who recognizes that it is dangerous and not to go. However, by not going, Stern becomes a key part of the team by assuring its existence through its innovations to rebuild the water walls that provide buffer for the re-construction team. Stern saves his life. Reception Cahners Business Information says the book will draw teens' attention from the very first page.[1] and entertainment weekly call timeline exhilarating entertainment. [2] The novel has also understood the attention of scholars of medievalism, as Crichton has praised Norman Cantor's discovery of the Middle Ages (1999) as a central influence on his characterization of academic research on the medieval past. Crichton's narrative supports Cantor's notion that the work of academic medievalists is little more than the subjective reinventions of the medieval era. [3] Film Adaptation Main Article: Timeline (2003 Film) Paramount Pictures produced a feature film adaptation with a budget of \$80 million released on November 26, 2003. The adaptation was written by Jeff Maguire and George Nolfi, and directed by Richard Donner, and stars Paul Walker as Chris, Gerard Butler as Marek, Billy Connolly as Professor Johnson, and Frances O'Connor as Kate. The film got spoiled by critics and audience alike. [Citation needed] Centennial War reference Also see ^ Crichton, Michael (1999). Review timeline on Google Books. Alfred A. Knopf.
