Quantity: 1 2 3 4 5 6 7 8 9 11 11 13 14 15 16 17 17 19 20 21 21 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 Main features Quality of the data sheet: Created/Standardized by Icecat The product information and data sheet is provided by Icecat. Intercompras makes a constant effort to verify this information, but is not responsible for its veracity. The quality of the data sheet can have several levels: Created/standardized by icecat: the data sheet was created or standardized by an Icecat editor. Created by DELL: The data sheet was imported from an official source of the manufacturer, but has not yet been standardized by any Icecat publisher. Only logistical information has been imported: We only have basic information imported from the manufacturer, the data sheet has not yet been created by an editor. Submitted by a user: An icecat user loaded a data sheet. The listing has not yet been controlled by an Icecat publisher. For full descriptions, features, specifications, and compatibility, check the manufacturer's website based on the model you choose. Terms and Conditions Receive exclusive promotions At this time, compatible products do not have units available. Warranty extensions If you need warranty extension for a product you have already purchased, please contact your sales executive to validate your serial number in: If you need the warranty extension of a product you have already purchased, please contact our sales area to validate your serial number in: This product cannot be sold individually, if you wish to purchase it, you need to include any of the following products in your cart. Licenses supported by this product: Warranties supported by this product: Thank you for your understanding. We remove some products from your cart as they cannot be sold individually. What is CAL in the scope of Windows Server? The term CAL comes from the acronym Client Access License. It itself serves as a wizard component, so that it can help the operating system function properly on the computer. I find it very important to clarify that these do not provide legal rights for other users or devices to connect to the server in question, for this, it is necessary to acquire special cal licenses, as there are several types of these. Typically, when you purchase a product with a Windows operating system, it usually brings a server license and between five and ten CALs so that other users can connect to the server from other remote devices, however, if you need more CALs, they must be purchased separately. There are several types of CAL licenses, however, two in particular are especially useful, so the most common and popular among individuals who use them, these are the following: The CAL license for users: CALs for users are very important, so that each of the individuals who need to access the server can make use of functions such as printing or file storage. In this way, the CAL license for users is perfect for companies with a large number of workers who make use of multiple devices and who constantly require access to the company's network, especially if the number of devices in the company exceeds that of users. CAL for appliances: Another important type of lime that exists is lime devices that have access to the server, regardless of the number of individuals who make use of them. This alternative is much more logical for companies if multiple users use the same devices at different times, a perfect example of this would be a personnel shift change. In this case, it would not be necessary for the arriving employee to use a user's CAL to access the server, because the device he will use already has one. Where can CAL licenses be purchased? Buying a CAL license for Windows Server is extremely easy from the Microsoft web portal, where you can find the Windows Server section and within it, the Purchases section in which you can access all types of licenses. Similarly, CAL licenses for users and devices can be purchased in one, five, ten, and fifty packages, so if you need several, it's a good idea to take advantage of the occasional discounts offered by Microsoft. To see your office license, check this out. For Windows 10 licenses, see this. Windows Server operating system licenses are only for the operating system to run on the physical server for which the license was purchased. It doesn't give users or devices the legal right to connect to it. For users or devices to access the server and use certain services we need to purchase separate licenses, we'll talk about this in this article. Or put another way: When licensing a windows network, several types of licenses are required: server license (the server operating system... (Windows Server 2016, 2019, etc.) License of client computers... (Windows 7, 8, 10, etc.) License for computers to connect to a server or CAL license for users to remotely ocect RDS CALs... The CUSTOMER Access License or Customer Access License will not be required for anonymous users accessing the server over the Internet. The most popular are Windows Server, RDS, SQL, and Exchange CALs. In this article, we'll focus on the first two Windows Server CALs needed to grant users and devices access rights to the Windows Server operating system that is running on the server. Windows Server CALs are licensed per user or per device, depending on the scenario, we'll choose the most cost-effective option. We purchase a CAL for each user who accesses the server and uses services such as file storage or printing, regardless of the number of devices they use. It is ideal for companies with users who need roaming access to the corporate network using multiple devices, or when are unknown. It counts if the number of devices exceeds that of users. Cal device The other option is to purchase a CAL for each device that accesses the server, regardless of the number of users who use that device. It makes more sense, for example, if workers use the same device in different shifts. Remote Desktop Services (RDS) licenses – formerly known as Terminal Services, Terminal Services, or Remote Desktop Services are licenses for access to remote servers In addition to the traditional virtualization scenario (formerly known as Terminal Services), Remote Desktop Services are extending resources to service virtual desktop infrastructure (VDI). RDS CALs are also licensed per user or per device What is the difference between a Windows Server CAL and RDS CALs? A WINDOWS Server CAL is used for us to, for example, connect to the server and access your files, printers, etc. An RDS CAL serves remote access to the desktop to the server (accessing programs or the entire desktop remotely). For remote desktop access, we'll need an RDS CAL (user or device) + a Windows Server CAL (user or device) RDS CAL contains a product key for activation. NOTE: The server operating system purchase includes 2 Windows Server CALs and 2 RDS CALs for administrative purposes. Customer Access Licenses (CALs) can be purchased at any time, either when we purchase a new server, or later as a standalone option. Currently, Windows Server CALs can be purchased in packages of 1, 5, 10, and 50 (users or devices). RDS CALs in packets of 1, 5, and 20 (users or devices). Terer note that certain manufacturers, such as HPE and Dell, offer OEM version packages for their servers (they are a bit cheaper but come with BIOS blocking). Prices for RDS CALs are available on the Microsoft page. URL: caLs for Windows Server 2016 Default version and datacenter required. No CALs are required for Windows Server Essentials, the company will have a maximum of 25 users and 50 devices. Check the compatibility of the versions in the following image. Image.
