Middle school curriculum guide

The private school curriculum is set by an individual school charter, unlike public schools, which are subject to strict curriculum guidelines developed by the state. While the majority of private schools are free to teach their preferred curriculum, they are still subject to the basic educational requirements determined by their local Education Department. These requirements vary from state to state, but they generally include health and safety measures to protect student wellbeing, such as transport regulations, food handling, employee behavior and record keeping. Requirements may or may not address the curriculum, but if they do, standards are more flexible than those governing public schools [sources: the Wisconsin Department of Public Schools]. The flexibility of this curriculum allows private schools to focus their teachings on areas they consider important, or on subjects that meet the basic philosophy of the school. For example, religious schools are allowed to teach religious-based classes that use bibles or other religious texts, all of which are banned in the majority of public schools. One of the biggest debates on the topic lies in the teaching of evolution vs. evolution in science class. While most public schools are required by law to teach evolution alone, private schools are free to teach either or these two theories. Many private schools, especially at high school level, offer students the opportunity to participate in programs that are not found in most public schools. For example, in art-based

private high schools, students can spend half the day for regular academic studies and the other half of the day following vocal or dance training. Other curriculum focuses on athletics, honorary discipline or special needs programs for students who need additional academic guidance or assist in learning skills. In most public schools, these types of special programs are often funded or nonexistent. For example, many public school students in high-popped urban areas can participate in arts, music or gym classes only once a week because of budget constraints. Another benefit to the private school curriculum is the opportunity for students to thrive under an alternative teaching philosophy. In schools that follow popular Waldorf or Montessori programs, for example, children are not graded on performance and do not study in formal and organised classrooms, especially in early years. The Quaker-based Friends School uses a curriculum where all classes are taught in the context around a particular topic. If this week's topic occurs as an ocean, all mathematics, English, reading and other classes to This will centre around the aspects of the ocean, which gives children context for learning. This type of teaching methodology is much different from those implemented in public schools, which must serve when it's time for students to take standard tests. Although public schools often have to teach tests (so to speak), private schools can take the time to develop students' curiosity while building a lifelong love of learning. It's not uncommon for your child to feel burned after months of learning away. Here's an expert strategy for some common online school struggles. Read More If you're going to homeschool your kids, chances are you can use some advice. Login: Reddit users who have experienced it from the students and informed all.
