## Future city model rubric

Students build a physical view of a section (or multiple parts) of their city using recycled materials. In addition to presenting their city of the future, the City Model must also show the team's solution to this year's challenge. The model must have at least one moving component, be built at scale, and must not exceed the \$100 expense budget (including all materials also used in the presentation, Q&A, and Special Awards). Engineers, architects, scientists and urban planners all use models and visuals, such as slide shows, to convey their ideas, share their research and predict the success of their design. Please note that the ideas represented in the City Model should be in accordance with the City Essay team. New format for 2020-2021: To accommodate both personal and virtual learning environments, there are two model building options for the 2020-2021 competition. Both options are submitted via a slide show format prior to the regional competition. • Option 1: Your team can choose to build a single model. • Option 2: Your team can choose to build multiple model segments. These model segments are separate pieces that represent different parts of the city. Model segments don't have to physically fit together. After building the model or model segments, each team will have a slideshow (using the included template) that showcases their city via photos, a link to a short video of the moving part, and brief descriptions of their work. Slide shows are scored by judges who use the section to get started Before students get started, you should do the following: View the City Model Rubric in the program manual or download here. Check out the requirements for the city model (listed below) Check out the city model video instruction on our resources page See examples of other city models in the gallery for inspiration City Model Requirements Model Segments: Teams can create as many model segments as they like, although there is a limit of 19 photo slots available in the slide show. Before you start planning your model or model segments, check the slide show template and category. Model segments don't have to fit together to form a single physical model. Scale: Each model segment must be in line with the scale. However, different segments (even between the same team) can use different scales. For example, if your team creates three model segments, they can each have a separate scale (total of three), but each segment must be consistent in scale. Each team will record a short video (no longer than 1 minute) demonstrating their moving role, describing the role it plays in the city and explains how the team designed and built it. Teams link to this video in their slide show (instructions are included in the template). Teams can use any video platform that is public YouTube). Include the name of your team/city in your video. Slide show: Each team submits one slide show. They can use photos of all model segments created by their team. Teams use the included slide show template. Slides may not be added or deleted. Text in purple must be deleted before submitting it. Text in black should be left on the slides. Teams cannot resize the text box in the slide show template. All descriptions must fit in the box. The font size must not be smaller than 14 and must be Calibri (or an equivalent) font. The model slide show must be stored as a PDF and submitted in the online portal on FutureCity.org. Budget: The combined value of materials used in the city model and city presentation should not exceed \$100. Costs must be reported via the match expense form. General: The use of live animals, perishable objects or dangerous objects (e.g. dry ice, fire, flying objects) is not permitted. While a small number of separate pieces of previous competition models can be reused, the models must be a new representation of a future city and of the bare baseboards built up. There are no size restrictions for the model or model segments this year. But this doesn't mean that a larger model is better. Before you start, check the category and slide show template. Download the program manual from the Sources section for the full list of rules and details about the city model. Visit this page for a further overview of rules, scores and deductions: 2012 Great Plains Region Due Dates - Item Date Due Sim City Model Due November 16, 2012 (filing at the end of the day) Sim City file Research Essay & City Narrative Due December 14, 2012 (filing by the end of the day) Essay, City Narrative, RE-CN-HS Form (see Resources page) Regional end date January 26, 2013 (Kansas State University in Manhattan, KS) Physical model, presentation material, expense form/receipts See the Rubrics below for how the Future City components are assessed. Assessed.
