Star trek fleet command guide mining

READ LATER - DOWNLOAD THIS POST AS PDF >> CLICK HERE << Mining is one of the more important tasks you need to do in Star Trek Fleet Command. You need it to meet your daily goals, complete missions and events. The better you get at the maximum speed of your miners, you can finish all these things faster – and let yourself be moved to other funnier things. Hopefully you can do just that with these mining basics. I like that my mining is done every day before the end of my coffee. (Talk about coffee, Get your first bag From Amora coffee for free, pay 1.00 USD reservation fee today!) What You Mining The Resources Parsteel Tritanium Dillithium The Materials. Each of them comes in three classes (2*, 3* and 4*), and you need to refine them to produce the materials needed to update your ships, your station and your research. Specialty Items Data (damaged and undamaged) Raw Latinum With the tips in this article, this Antares is mining over 18,000 3 * gas per hour. Mining Basics – The right ship for the right job Various ships specialize in dismantling different things. These ships will give you a bonus that will increase when you ascend them. The bonuses listed apply to Tier 1 ships. ECS Fortunate +15% Mining Rate of Parsteel Envoy +15% Mining Rate of Tritanium The North Star 0.1% Discount on Officers Health in 3* Mining Bonus Horizon +15% Mining Rate of Dillithium Botany Bay +26,500% Mining Bonus for Corrupted and Undamaged Data D'Before +12.000% Mining Bonus for Raw Data K'Vort +70% Mining Rate of Crystal Antares +70% Mining Rate of Gas Valkis +70% Mining Rate of Ore B'Chor +120% Mining Rate of Crystal USS Hydra +120% Mining Rate by Gas Vorta Vor +120% Mining Rate of Ore Related Items – Please Stop Mining Latinum with Envoys You can increase the mining speed of your ship by updating its laser mining. And by choosing ... The right captain to pick the right captain for your ship depends on what you're trying to recover. Each member of the Surveyors and Miners group specializes in the resources of the material. Helvia +40% degradation rate of Parsteel K'Bisch +40% degradation rate of Tritanium Domitia +40% degradation rate of Dillithium Barot +40% degradation rate of Crystal T'Pring +40% degradation rate of gas stonn +40% degradation rate of ore Joaquin +50% protected cargo Ten out of ten +50% degradation rate to Parsteel, Tritanium and Dillithium The officers are important to some of the officer skills also make a big difference. (In brackets, the amounts are by level) Joaquin - Data Mining Speed (40%, 60%, 80%, 100%, 125%) Ten out of ten - mining (80%, 100%, 120%, 140%, 160%) T'Pring - Protected Freight (50%, 100%, 150%, 200%, 300%) Five out of ten protected cargo (30%, 35%, 40%, 45%, 50%) Cadey McCoy's officer's ability, a psychologist who increases the effectiveness of the captain's maneuver, has no impact on mining. Synergy is Here is a maximum synergy crew for gas mining. The other officers on your bridge are also important. When you bring your officers together with others from their group, you get a synergy bonus on the captain's abilities. Placing a command, science, and engineering officer also increases your synergy bonus. Officers of higher classes will give even greater synergy bonuses. The flash symbols and yellow lines indicate a synergy bonus. The percentages between the officers let you know how much synergy has been added. Location, location, location Not all nodes are the same. Resource and material nodes vary depending on the capacity that the node has before you need to reset it. This is a big reason why you don't want to ignore the engines on your miners, and why sometimes it can be worth sacrificing some synergies to add warp area with Scotty. Data and Raw Latinum nodes vary depending on the speed at which you mine. In general, the higher the warp range required to enter a system, the faster the mining rate for those nodes. You can see your Latinum cells in your item inventory, under Other – Misc There are also two systems in the Borg space that have the fastest raw Latinum nodes in the game. You need special Latinum cells to receive by meeting assimilated traders in the Borg space and refining the Latinum Antiques they provide for the command to gain access to these systems. You need a level 4 to 6 Vid'ar to get rare Latinum cells. Your Vid'ar must be levels 7 to 9 to get epic Latinum cells. Torra Sedra is a Level 28 system that requires entry to Rare Latinum Cells. Zed Alpha is a Level 31 system, and it requires Epic Latinum Cells to enter. Mining Basics – Protect your load The first block at the bottom of the screen shows your progress toward your protected charge. On most servers, unprotected cargo is a fair game, and OP or over-protected cargo leaves your ship vulnerable to attack. You can increase this by upgrading the cargo hold on your survey ingenuity ship or upgrading your ship – and by deploying your officers. Three officers in the game offer you charge protection bonuses. The ability of Joaquin's captain gives a protection bonus. The officer skills T'Pring and One of Ten also give protection bonuses. If you wanted to skip a miner overnight, you can put all three on a ship and create a Max Protect Crew – or you can use an Augment Synergy Crew with Joaquin to increase your protected cargo. Reset a node From time to time, you will exploit a node. You can use it but you need to reset the node. To do this, just remove the miner from the knot and put it back on. In the last few days, you would have to change your view from within the system and plug it back in so that the node can be reset, but no more. Of the simple mining basics, this is a big one. Some of them can Who knows? Redeem into your score scores for events and daily goals are calculated by taking your miner out of the knot (you can right back on it to keep mining). So you want to make sure that you have done this as often as you can just before the end of the current event to ensure that all points are counted. You can also preload mining for events, but mining as much as possible and not redeem before dailies or events begin. Good luck out there. LLAP, Carnac. Cover Photo by j3net Mining is a key activity in The Star Trek Fleet Command (STFC) to produce raw materials that you can refine and use to upgrade your star base and ships. Increase mining productivity by assigning the right officers to your ship and get bonus mining speed and defense against other players. This is a complete list of all officers available in the Star Trek Fleet Command, and a list of all captain and officer skills. We will then show you our recommended tasks based on common tasks in the game. Here are some of the best systems to extract certain raw materials. Latinum Mining LocationsRaw Latinum nodes have been added to 25 systems in the galaxy. The base interest rate for these nodes improves significantly in higher-level systems. In addition, they have a 1 out of 8 chance to spawn rich raw Latinum that mine at double base rate! Suliban is a special system and has only rich knots of different qualities. Raw Latinum can be refined at the refinery on a 22-hour cooldown from level 16. The refining process converts raw Latinum into Latinum at a guaranteed price. The conversion process produces ship parts for the Ferengi D'Vor as a by-product.
