Are you an engineer, architect or some other professional in the construction and construction industries who works with aluminum? If so, you can't be without the 2015 Aluminum Design Manual. This latest edition of the Handbook, which was last updated in 2010, includes essential information about working with lightweight and corrosion-resistant aluminum carcasses. Members of the Aluminum Association, please click here for special members' prices in the members' bookshop; Non-members can buy hardcopy here or digital download here. 2015 ADM includes: Specifications for aluminum structures and comment: Provides rules for determining the strength of aluminum structural components, connector and structures using multiple methods. The comments section includes additional backgrounds and research references. It is necessary to comply with the International Building Code of 2015. Design Guide: Deals with additional structural design, including diagrams and background on adhesive binder joints, aluminum composite material, extrusion design, corrosion prevention, fire protection, sustainability and design references for aluminum structural components in bridges, railway cars, ships, pressure vessels, pipes and tanks. Material and section properties: Material properties, including thumbnail and tempering systems for forged and cast aluminum thumbnails, comparative characteristics and typical mechanical/physical properties. Dimensions and properties sections for aluminum channels, I-beams, angles, tees, zees, pipe, roofing and siding. Design Aids & Illustrative Examples: Design aids provide buckling constants, permissible stress and load tables, fastening strength, minimal bending radius and beam formulas for various aluminum thumbnails. Illustrative examples include 31 examples of calculation of the structure based on the specification for aluminum structures. If you're working with aluminum constructions, you need the 2015 Aluminum Design Manual. The manual is available as a searchable electronic download, printed copy book or package package from the Association's bookstore. Members of the Aluminum Association, please click here for special members' prices in the members' bookshop; Non-members can buy hardcopy here or digital An essential reference for architects and designers now available at the ARLINGTON Association Bookstore, VA. — Today, the Aluminum Association has issued an Aluminium Design Manual from 2015, the 10th edition of an essential reference for all professionals working with aluminum in structural applications. This latest version of the manual, which was last updated in 2010, is available for purchase through the Aluminum Association online bookstore in www.aluminum.org. Aluminum design manual is absolutely essential for engineers who design buildings and other wearable structures using aluminum, said John Weritz, vice president of standards and technology at the Aluminum Association. A reference in the 2015 International Building Code, compliance with this important standard makes the Aluminum Design Manual an essential document that allows engineers to create safe and innovative structures using modern corrosion-resistant aluminum legos. The design manual is divided into several key parts, including: Specification for aluminum structures -- It provides rules for determining the strength of aluminum structural components, connector and structures using either permissible power or load and resistance factor design method. Safety factors for buildings and bridges and resilience factors for buildings are also ensured. 2015 edition fatigue, compression yield strength and shear top strength Axial compression member buckling strength Strength Alternative methods for determining pillar strength and beam Flexible yield strength, rupture, local buckling and side-torasia buckling Shear and torasia power rupture and shear strength rods and in nets supported at one edge of the welded bond, including partial penetration groove joint testing , quality control and quality assurance ... and more. Commentary specifications for aluminum structures -- provides background for provisions in the Specification of Aluminum Structures and references to the research on which the Specification is based. Design Guide -- Addresses structural design issues not included in the Specification for Aluminum Structures, including diagrams, diagrams, wacky joints, aluminum composite material, extrusion design, corrosion prevention, fire safety, sustainability and design references for aluminum structural components in bridges, rail cars, ships, pressure vessels, pipes and tanks. Material properties – Includes systems for the production of pouring and hardening for frames made of forged and cast aluminum; comparative characteristics of wrought drooling; typical mechanical and physical properties, including thermal expansion, electrical conductivity and density (all in US and SI units) and typical projectile power at The temperature. Section Properties -- Lists the dimensions and properties of the aluminum duct section, I-beams, angles, tees, zees, square and rectangular pipe, round pipe, pipe and roofing and siding; lim and roofing and section property formulas for different geometric shapes. Designer accessories - Provides fastening constants for welded and undesirable thumbnails, 24 permissible stress tables for various welded and immobile, permissible flexure loading tables for ducts and I-beams, tread plate, roofing and siding; fastening strength, minimum bending radius for aluminum sheet and plate, wire and rod, permissible stresses for fillet welds and complete and partial grooved deceptions and formulas for the moment, shear and deflection for 50 beam housings. Illustrative design examples: includes 31 examples of design construction calculation based on specification for aluminum structures. Aluminum Design Manual 2015 It can be purchased through the Aluminij Association bookstore, which can be accessed by clicking on the bookshop card on the Association's website. The pickup price is \$335 for members and \$375 for non-members. The book price is \$350 for members and \$395 for non-members. For a limited time, if you buy an electronic version and a hard copy together you can get a special discount on the offer package. Coupon codes are listed for members and nonmembers in the product description on the bookstore's website. # The Aluminum Association represents U.S. and foreign companies and their suppliers throughout the value chain, from primary production through value-added products to recycling. The Association is the industry's leading voice, providing global standards, business intelligence, sustainability research and industry expertise to member companies, policymakers and the general public. The aluminum industry helps manufacturers produce sustainable and innovative products, including more fuel-efficient vehicles, recyclable packaging, greener buildings and modern electronics. In the U.S., the aluminum industry generates \$152 billion worth of economic activity. For more information, www.Aluminum.org, on Twitter @AluminumNews or on Facebook.com/AluminumAssociation.
