Next order evolution guide

The mechanics of the Digimon World Next Order are complex and rewarding, which can look rather warm at times. This Digimon World: The Next Order Diivolusi Terms Guide includes everything you need to know about achieving these terms as well as information on individual circumstances for each Digimon. The Digivolusi state is a unique necessity that must be met for Digivolve into a particular Digimon. Most, like HP or power needs, are pretty obvious, while others require more explanation. TF for example is Tamer Fail, which means how many times you leave your own Digimon land. Although Victory is the number of Digimon battles you have won (not the number of Digimon they have defeated). You can also unlock information about the State of The Digivolusi when you praise or scold your Digimon, you can also trade in Digivolution items on the Dojo - although this opens up the terms of the rawaon and not always for the Digimon you want. But don't be afraid, there's a great tool that you want to get a grip on. The great people at Reddit and GameFAQ have come together to create a very detailed overlay containing the practicals of each State of the Exclusivity in case of the Digimon time you are trying to get. No longer do you have to pack your belongings at the Dojo, or fight aimlessly to unlock a particular Digivolusi State. The expanses, which can be found HERE include The State of Digivolusi for ordinary Digimon, evolutionary errors, EXE Digivolutions and also DNA Digivolutions. Unlike their pocket giant cousins, Digimon does not develop through experience and flattening. They instead evolve - or digivolve, like phase turns for francais - over time. Just like humans, they turn out to be bigger, stronger and, just like us, shape uglier as they get older. DIGIMON STAGESAll digimons start their lives as eggs. In the Next Order you are assigned to look after two co-friends, and are therefore given two digi eggs. You can choose from several different digimons, both of which have the potential to develop into tens when dozens of different digimons. Digimon does not follow an evolutionary path. On the contrary, a single digimon can develop into a variety of new forms depending on how it is raised. For example, Koromon could develop into Agumon, Black Agumon, Veemon, and so on. The stage of digimon life is like:In ExerciseIn-Exercise II RookieChampionUltimateMegaDigimon evolutiongimon takes place after a few days in the game - the time moves in the Next Order at a rate of one minute each second real world. Digimon in practice usually develops so rookies are usually within a few hours of the game. Rookies develop generally after about three days in the game, Champions after seven days, and Ultimate is usually about 12 days. Mega digimons should not develop anymore, but rather through typical circumstances such as Digivolve DNA, and so on. EVOLUTIONARY NEEDS waiting for your digimon to develop does not mean it should happen. Because individual digimons have the potential to evolve into a variety of forms, certain needs must be met first to ensure a successful divorlution. Digimon World: Next Order displays six statistics (or, statistics) and seven additional values that determine evolution. The statistics are Strength, Stamina, Wisdom, Speed, HP and MP. All rather self-evident. You can easily raise your digimon statistics by visiting the dojo. Here you can improve a single statistic at a time, choose whether to train both digimons in a single statistic, or spread them across different statistics. For example, the proliferation of Agumon to Greymon means having the Power of Agumon in 800, his PHONE in 1200 and his Speed at 600. Digimon values are slightly different because they cannot be directly affected. To start, let's solve the values and what they mean; Main Thing – number required to trigger evolution (2 KP = 2 statistics, and so on)The Main Digimon - evolution will only happen if you have a famous share of digimonVictory - how much the battle of digimon has wonBond - measure your digimon affection towards you, increase by praising and taking good care of iDiscipline - if you scold or ignore his needsTM – if you fail to send your digimon to the toilet and he tweets himself this value will go up Heavily – how heavy your digimon is, increased by fatty foods such as meat and so on. Not all of these statistics and values are necessary for evolution and change depending on digimon. If statistics or values have symbols -, this means you don't have to pay attention. THINK OF EVOLUTIONARY NEEDSThe specific values and statistics for any potential evolution, as well as evolution itself, will not be known at first. What this means you won't know how to develop Patamon into Angemon, and so on. Thinking about how to develop your digimon into a certain form is easy, but time consuming. Events called Random Communication occurred after a successful battle in the wild, or after a training session at the dojo. Praising your digimon at these times not only creates its bond and/or discipline, but also reveals a potentially new form of evolution as well as one or two necessary statistics or values. Communication also applies if digimon is reluctant to eat the food given, where scolding it will teach adab good and reveal potential new forms and statistics/values. The good news is you only have to do this once for every 200+ digimon games. Once you know the form and the need for evolution it remains the information available. It helps you easily think of how to develop your digimon to get a reasonable Mega.DIGIMON DEATHLike we humans, digimon finally die. They will usually last for about 20 days in the game, or unless they fall ill, do not recover if injured, or you fail to develop your digimon by a certain point. Once the digimons die they will return from whatever form they form - Champion, Ultimate, and others - back into the digi egg. Again you will choose one of several options and start the whole process once again. As above, the potential digimon form and criteria for these forms will be accessible to you. UN-COVETED DIGIVOLUTIONDigimon will sometimes develop into uninformed forms, depending on how they are treated. Remember the TM grade? If metres of digimon droppings fill up along the way they will develop into unpleasant Sukamon and PlatinumSukamon - depending on the current shape. Digimon statistics can also negatively affect its evolution. If rookie power statistics are higher than Wisdom statistics he will develop into Numemon. This will only happen, however, except for all the needs of the for any form of champion that is potentially digimon it is not fulfilled by the time they turn seven. EXPERIMENT AND HAVE A WORLD OF FUNDigimon: Order Next is a long game, and you'll spend hours tinkering around with evolution. Your digimon will go through dozens of respawns and by the end of the game, you will reveal the details for all the digimons available. The best approach to evolution, as misleadingly misleading in the beginning, it was for fun and trying nothing and everything. And don't forget to share your experiences in comments and on forums. Digimon World Next Order allows you to be more powerful with your Digimon friends. As you digivolve, you will unlock several branches that you can turn into and can drastically change how your Digimon Is rationed. I'll explain how digivolusi works in this game as well as some things you want to know to make the process easier. This guide will address everything about Digivolution in the Digimon World Next Order including: Digivolution Basics - How digivolving works and the different stages you can achieve. Digivolution Dojo and Tips – How to make digivolving easier. Digivolution BasicsAs you Digimon got statistics and age, they will digivolve. What they're ivolusi is determined by their statistics -- and when determined by their current. There are 6 forms of Digimon you can go through: In Exercise I - This is the baby form you chose in the beginning. In Exercise II – This is the first thing he digivolves into, which can also be seen when you choose your Digimon. Rookie – This is the first form he digivolves into that can be changed by statistics. This applies around the age of 1 if you meet the minimum main case required for 1 option. Champion – This applies around the age of 3 years if the main thing is fulfilled Ultimate – This applies around the age of 7 years if the main thing is fulfilled. Mega - This is the final form that takes place around the age of 10 years if the main case is fulfilled. Key PointsEvery Digimon you can dig into have certain main things, or statistics, that must be achieved before they can go crazy. If you don't meet the required minimum number, you won't be sneering. Any of these cases can be HP, MP, STR, WIS, STA, SPD, Bon, Discipline, Weight, Training Failure, Victory, or Main Digimon.Discipline can be raised or lowered depending on how you respond to communication opportunities. Praising if they do something good, or scolding if they do something bad, will lead to Discipline. Doing otherwise would lower discipline. Failure Exercises don't basically keep them. Not letting them use the bathroom and asking them to train if they are sleepy will all lead to exercise failure. Some evil Digimons such as Beelzamon have various training failures as one of their main things. Key Digimon only has Digimon.At you won't know what the main thing is, or how much you need. Whenever you get a communication opportunity, praise or scolding. This will unlock 1 or more of the main necessary things. If the key point is light blue, this means you complete it. If you want to take an early look at the need. Reddit and Gamefaqs teamed up to create an overlay. Digivolution Dojo and Tipsif Digimon you have been reborn once or twice, you will see that you usually fulfill some of the main things digimon as as as you digivolve. This causes your Digimon to be rawak ethically into any choice. This may disappoint, but the digivolution dojo corrects it! This could unlock at the beginning of chapter 2 by recruiting Grapplemon and having a variety of upgrades/Digimons that could add to it. Other digimons to recruits who help the dojo include: Paildramon in the Entry hat - Unlocking the dna of the digivolusi. Antylamon in Gut Time – Helps you know the main thing. See my dojo guide for more information. The game TipsThe is a balancing act, coupled with Tamer's finesse that you can help a lot. I'm not worried about what digimon you're digivolve so you get the first upgrade for the dojo digivolusi. If you want to master your Digimon, I reserve tamer skills that increase parameters when silent and from practice. Also, make sure you recruit Kabuterimon so you can upgrade your training equipment. This will allow you to get more statistics when you train. That's all you need to know about being included in the Digimon World Next Order. Let me know if you have any questions! Q!
