Yukon middle school calendar

The first biggest battle when you become a middle school parent is this: wrapping your mind around the fact that your child (emphasis on the child) will soon be thrown at the wolves – or at least the surly bunch that seems to populate your child's future school. Since when do sixth-graders grow sideburns? OK. Stop breathing into this paper bag. Your child will be fine - it is you who is worried. We know that as a parent it can be difficult to see your child growing up and becoming his own person. See how they burn under pressure from a new school, peers, sports and homework, and that's enough to restore the clock to simpler days – those that relied on kajoling a fearless toddler to eat broccoli. But this, my friend, is your first mistake. It's time for your mental game to move on. If your child's trip to middle school will be OK (and that's it), then you need to get your head in the game. And that means realizing that your child is growing up and setting a strategy for dealing with it before the first day of school. Survival Strategy Two: Independence Day Sweet Freedom. High school students miss it, but they can't handle it, and you may not be ready to start letting go. The key is to find a balance that is healthy for both of you. One way to do this is to fulfill the desire for freedom of the child (which is a natural developmental phenomenon, by the way), allowing him to participate in various approved activities. Playing basketball, for example, offers your child an end for many things: camaraderie, physical activity, and even peer pressure. Yes, peer pressure can have a good side. Just ask every tween who flunked pre-algebra, was benched by the coach and let down her teammates. This will not happen again. Moreover, organized extracurricular activities offer the child a (supervised) chance to escape from the watchful eyes. But you can still get to participate by cheering on games, applauding a two-act game or going to an art show. Whatever interests your child, give them a way to explore it. Your task is to offer borders, restrictions and support. One way you can practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to manage time, make choices and solve problems. Help your child set up a system - a place and time to learn with all the resources they need - and then let them face the challenges of homework in high school without your hovering presence. Keep in touch with your teachers, even if your child assures you that this is the most ingest thing you've ever done. Therefore, some intelligent person invented the email - use it to send an occasional inquiry about child in the classroom. Survival Strategy Three: Oh, the drama It's hard to animate bent on teen-hood. No No No if there is increased self-awareness (thanks, puberty), but there are also many new relational situations to encounter. When a school turns into a fashion show or popularity contest, all this drama becomes a bit risky. This is because it is difficult for parents to know when to enter and when to let their son or daughter work things alone. We happen to agree with Joe Bruzzese, author of The Parents' Guide to Middle School Years, which advises parents to play an auxiliary role as a form of peer relations and dissolve. Of course, we were guilty of choosing a mean girl's mom and about our opinion, but we learned that it's hard that usually doesn't help. Steer clear of the day-to-day drama of a friend, but be willing to step in if you feel that your child is being bullied. Another minefield to avoid? Fashion. Set a few clear boundaries, such as the length of the coastline or the stopping point at the waist, but be willing to let your child comment on what he or she wears. While the animations demand friendship in melee combat in high school, they are likely to try on different styles. Personally, we don't start worrying until we talk about tattoos and a lot of piercings come into play. When leading your high school student, remember: Your role is not perfection. Shake off any nagging doubts about your own worth that may bubble up the surface of the first chaperone middle school dance. (Hey, it's happening!) Engagement is key, even if you allow animation to be more autonomous. According to a report by researchers at Johns Hopkins University, when you're clued to in the middle school scene, your child is more likely to have better grades, attendance and homework skills. Plus, they will be prepared for success in high school. Hyperventilating again? All right. You can put down this paper bag. We'll leave our discussion in high school for another day. Page 2 Back to school means stocking up on pencils, glue sticks and other traditional materials that generations of children have tucked into desks, cupboards and lockers. In primary and secondary schools, teachers usually provide lists of specific subjects to pick up; and even in high school, many instructors require certain types of paper for notebooks, pens and the like. In addition to the classic consumables - crayons, notebooks, rulers - that constantly make these letters back to school, there are many others to keep in mind. Today's student has an arsenal of kitchenware and gadgets to help him manage workloads and improve the learning experience. Whether it's a fresh spin on a classic or a newfangled gadget, these five cool school tools make the classroom to make your son or daughter study in style. Content Even pre-K students can get an edge on computer science know-how from learning laptops. For less than \$50, these laptop-like gadgets can enhance the basic skills taught in the classroom with fun, educational games and In its short history, learning laptops now comes in handy sizes with more sophisticated graphics and a wide range of software that covers subjects including reading, math, foreign language and more. Children can navigate many of these models using a keyboard, an electronic stylus, or a control panel with an interface, such as a video game system. For high school students and high school students who need text processing and internet access, netbooks are a great option. Priced at a few hundred dollars, these mini-laptops have been grabbing tech headlines for their usefulness and affordability. In fact, some schools are starting to use netbooks in the classroom thanks to their budget-friendly assets. Advertising Finding the perfect backpack is crucial for many school children. After all, they tote it with them every day and they want to make a cool impression. Parents are probably more concerned about the fee that the package takes on these young backs. Fortunately, there are alternatives that will encourage both sides. Unfortunately, you will probably have to spend more cash in exchange for ergonomic quality. To protect the back and spine, pay attention to the packaging with plenty of padding. Padded straps and back panels are good signs. Make sure the straps fit your body and your backpack comes with a chest strap for extra support. When wearing a backpack should sit higher on the back, and not tighten the spine, dangling on the hips. There are also backpacks to choose from, but some schools already allow them. And they can detract from the key cool factor that your student requires. Advertising It is important that school children learn to add, subdue and so on in their heads - with the occasional help of fingers and anxies. But when higher mathematics takes place in middle school and beyond, it's time to pull out big guns. Calculators have been a routine item in older children's backpacks for some time now, and now they offer more mathematical and scientific help than ever before. Texas Instruments, one of the most popular brands of calculator manufacturers, offers additional software, storage and pre-installed tutorial programs on some models. Students can also now choose from more aesthetic calculators, such as pink chewing gum chart edits and red models for novice fire engines. Advertising Pencil and paper will never go out of fashion to take notes. But for techie students out there who want to get the most out of their note opportunities, Smartpens are neat and relatively affordable at about \$150. LiveScribe's Pulse Smartpen writes on specialized paper that digitally records what you write and where on the site. At the same time, the pen also capture sound, which means that the student can take notes and record a lecture at the same time. When When Time to study, Smartpen hooks up on your computer to download all your notes to a single source. In this way, students can put smartpen on notes on specialized paper to hear the right sound. If your student doesn't require as much technology magic, fly fusion pentop computer from Leap Frog also digitally records what the student writes. The writing device then converts the written notes into digital documents. Like LiveScribe Smartpen, Pentop also requires specialized paper. Since Pentop doesn't save audio, there are many discrete mP3 recording devices and audio recording add-ons for iPods that can fulfill this advertising feature between taking notes, learning a laptop and toting a backpack, kids need to do their homework. Whether it's solving a difficult math problem, researching a scientific fair project, or creating a bibliography for a timely document, the Web has plenty of educational resources. But tracking down the best of these resources can be a challenge, and parents may be hesitant to release their children online. Fortunately, some companies have developed robust homework assistance programs for students at all levels of learning. DiscoveryEducation.com, for example, provides assistance for seven different thematic areas, along with interactive games and tailor-made external web links for additional tutoring. For a monthly fee, Cosmeo by Discovery Education is a one-stop-shop for Discovery movies, science articles, step-by-step academic teaching and more. Using a wide range of valuable information online, children can improve their learning experience and continue to create A+ grades. Advertising
