keywords that can be used for indexing purposes. Statements All manuscripts must contain the following entries under the heading Statements. If any of the sections are not relevant to your manuscript, please include the headline and write Not Applicable for that section. To be used for non-life science journalsFunding (information explaining whether and by whom the research was supported)Conflicts of interests (including appropriate disclosures)Availability of data and material (data transparency)Availability of code (software application or code)Contributions from authors (optional: view the entries guidelines from the journal whether statements are required)To be used for life journals + articles with biological applications from authors (optional: view the entries guidelines from the journal whether statements are required)To be used for life journals + articles with biological applications from authors (optional: view the entries guidelines from the journal whether statements are required)To be used for life journals + articles with biological applications from authors (optional: view the entries guidelines from the journal whether statements are required)To be used for life journals + articles with biological applications from authors (optional: view the entries guidelines from the journal whether statements are required)To be used for life journals + articles with biological applications from authors (optional: view the entries guidelines from the journal whether statements are required)To be used for life journal whether statements are required (optional: view the entries guidelines from the journal whether statements are required)To be used for life journal whether statements are required (optional: view the entries guidelines from the journal whether statements are required)To be used for life journal whether statements are required (optional: view the entries guidelines from the journal whether statements are required (optional: view the entries guidelines from the journal whether statements are required (optional: view the journal whether statements are required (optional: view the journal whether statements are required). interest/Competing interests (including appropriate disclosures) Ethical approval (including appropriate approvals or waivers) Consent to participate (including appropriate statements) Availability of data and material (data transparency) Availability of code (software application or custom code) Contributions from authors (optional: view the submission guidelines from the journal or statements are mandatory) See the relevant sections in the submission guidelines for more information and various examples of formulations. Please revise/modify the sample statements based on your own needs. Manuscripts must be submitted in Word. Use a normal, plain font (e.g. 10-point Times Roman) for text. Use italics for emphasis. Use the automatic page numbering feature to number the pages. Don't use field features. Use tab stops or other indent commands, not spacebar. Use the table function, not spreadsheets, to create tables. Use the comparisons. Save your file in docx format (Word 2007 or later) or doc format (older Word versions). Manuscripts with mathematical contents can also be submitted in LaTeX. LaTeX macro package (Download zip, 188 kB) Headings Use no more than three levels of displayed headings. Abbreviations must be defined first and then used consistently. Footnotes Footnotes can be used to provide additional information, including quoting a reference in the reference list. They may not consist solely of a reference citation and may never contain the bibliographic details of a reference. They must also not contain numbers or tables. Footnotes to the text shall be numbered successively; which must be indicated to tables with superscript lowercase letters (or asterisks for significance values and other statistical data). Footnotes to the article are not given reference symbols. Always use footnotes instead of endnotes. Recognitions Recognitions of people, grants, funds, etc. The names of funding organisations must be written in full. Name and year in parentheses in the text. Some examples: Negotiation research covers many disciplines (Thompson 1990). This result was later contradicted by Becker and Seligman (1996). This effect has been widely studied (Abbott 1991; Barakat et al. 1995; Kelso and Smith 1998; Medvec et al. 1999). Reference list The list of references may only work cited in the text. Do not use footnotes or endnotes as a replacement for a reference list. Reference list entries should be alphabetically with the surnames of the first author of each work. Magazine names and book titles should be cursn. Alber. John. Daniel C. O'Connell and Sabine Kowal. 2002. Personal perspective in TV interviews. Pragmatistics 12: 257–271. Article by DOI Suleiman, Camelia, Daniel C. O'Connell and Sabine Kowal. 2002. 'If you and I, like us, in this later day, lose that sacred fire...': Perspective in political interviews. Journal of Psycholinguistic Research. 1015592129296BookCameron, Deborah. 1985. Feminism and linguistic theory. New York: St. Martin's Press. Book chapterCameron, Deborah. 1997. Theoretical debates in feminist linguistics: Issues of gender and gender. In Gender and discourse, ed. Ruth Wodak, 99-119. London: Sage Publications.Online documentFrisch, Mathias. 2007. Does a low entropy restriction prevent us from influencing the past? PhilSci archive. . Opened june 26, 2007. For authors using EndNote, Springer offers an output style that supports the formatting of in tekst citations and reference list. EndNote style (Download zip, 3 kB) Springer accepts electronic multimedia files (animations, movies, audio, etc.) and other additional files published online, along with an article or chapter of a book. This feature can add dimension to the author's article because certain information cannot be printed or is more convenient in electronic form. Before submitting research data policy. We encourage research data to be archived in data repositories where possible. Submission Deliver all additional material in standard file formats. In each file, include the following information: article title, magazine name, author concerned. Keep in mind that larger-size files may require very long download times, and some users may experience other problems while downloading. Audio. video. and animation aspect ratio: 16:9 or 4:3 Maximum file size: 25GB Minimum video duration: 1 sec Supported file formats: avi, wmv, mp4, mov, mp2, mpg, mpeg, flv, mxf, mts, m4v, 3gp Text and presentations Send your material in PDF format; .doc or .ppt files are not suitable for long-term viability. A collection of numbers can also be combined in a PDF file. Spreadsheets must be submitted as .csv or .xlsx files (MS Excel). Specialized Formats Specialized formats such as .pdb (chemical), .wrl (VRML), .nb notebook) and .tex can also be delivered. Collect multiple files It is possible to collect multiple files in a .zip or .gz file. Numbering as if any additional material, the text must specifically mention the material as a quotation, similar to that of figures and tables. See the additional files as Online Resource, for example... as shown in the animation (Online Resource 3), ... additional information is provided in Online Resource 4. Name the files sequentials, for example ESM 3.mpg, ESM 4.pdf. Captions For each additional material, you should provide a concise caption describing the contents of the file. Additional file processing Additional information (SI) is published as received from the author without any conversion, editing, or reform. Accessibility To give people of all levels and disabilities access to the contents of your additional files, make sure that the manuscript contains a descriptive caption for each additional material Video files contain nothing that flashes more than three times per second (so that users prone to attacks caused by such effects are not compromised) For editors and reviewers to accurately assess the work presented in your manuscript, you need to make sure that the English language is of sufficient quality to understand. If you need help writing in English you should consider: Ask a colleague who is a native English speaker to review your manuscript for clarity. A visit to the English language tutorial that covers the common errors when writing in English. Using a professional language editing service where editors improve English to make sure your meaning is clear and identify issues that require your review. Two such services are provided by our affiliates Nature Research Editing Service and American Journal Experts. Springer authors are entitled to a 10% discount on their initial submission to any of these services, just follow the links below. English tutorial Nature Research Editing Service American Journal Experts Please note that the use of a language editing service is not a requirement for publication in this journal and does not imply or warrant that the article is selected for peer review or accepted. If your manuscript is accepted, it will be checked for spelling and formal style by our copy editors before publication.. 为便于编辑和评审专家准确评估您稿件中陈述 的研究工作,您需要确保您的英语语言质量足以令人理解。 如果您需要英文写作方面的帮助,您可以考虑:● 请一位以英语为母语的同事审核您的稿件是否表意清晰。 ● 查看一些有关英语写作中常见语言错误的教程。 ● 使用专业语言编辑服务,编辑人员会对英语进行润色,以确保您的意思表达清 晰,并识别需要您复核的问题。 附属 The 伙供构类务务 Nature Editing Service American Journal Experts 请 Waarschuwt 编辑务并 niet-actue publicaties Tabel tekst eisen, Doya 并thany of 证man 进 begeleiden 评议 of ontvangen. Ontvangen 您 een formeel ontwerp, 编辑 检查您 拼拼 of niet 规 en al dan niet kopiëren. Om redacteuren en beoordelaars uw paper correct te laten evalueren, is het noodzakelijk om een voldoende hoge kwaliteit Engels te gebruiken. Als u hulp nodig hebt bij het schrijven van een paper in het Engels, hebt u de volgende opties: Vraag uw eigen Engels sprekende collega's om te controleren of het Engels gebruikt in het manuscript is duidelijk. Verwijs naar Engels tutorials over veelvoorkomende fouten bij het schrijven in het Engels. • Gebruik een professionele Engelse proefleesservice. Proeflezers verduidelijken de betekenis van het manuscript, wijzen op problemen en verbeteren de kwaliteit van het Engels. Nature Research Editing Service en American Journal Experts zijn onze partners. Springer auteurs krijgen een 10% korting op hun eerste gebruik van een dienst. Raadpleeg onderstaande link. Engels tutorials Houd er rekening mee dat het gebruik van de Nature Research Editing Service American Journal Experts Engels proeflezen dienst is geen voorwaarde voor publicatie in het tijdschrift waarop u posten, en garandeert niet dat uw papier zal worden beoordeeld of geaccepteerd. Zodra het manuscript is geaccepteerd, zal onze copy editor de spelling en het uiterlijk controleren voor publicatie. For English manuscripts, they should be written to a level that is understandable enough for editors and reviewers to accurately evaluate the results of your manuscript. If you would like help with your writing, please consider the following: Find a native English colleague who will clarify your manuscript's wording and request a review. Visit our English tutorial page to see common mistakes when writing in English. In preparation for reviews, we use professional English proofreading services to clarify the meaning of your manuscript and identify issues required by the review to improve the level of English. De dienst voor de redactie van natuuronderzoek and American Journal Experts offer to stand through the agreement. For the first year of the Springer Book, the first year of the year is applied to the price discount, and the following link is available for verification. Editing Service American Journal Experts 서는 게재를 요구항은 아니며, 해당 서의용 피뷰 논9택되 게재을 의미택되락되는락될 않습니락될, 출판 전측 의해집자 의해 의해의 철자 및를 검는 과을치게 됩니치게 됩니 This journal is committed to maintaining the integrity of the scientific record. As a member of the Committee on Publication Ethics (COPE), the magazine will follow cope guidelines on how to deal with potential misconduct. Authors should refrain from misrepresenting research results that can damage confidence in the journal, the professionalism of scientific authorship and ultimately the entire scientific effort. Maintaining the integrity of the research and its presentation is aided by following the rules of good scientific practice, including*: The manuscript should not be submitted to more than one journal for simultaneous treatment. The work submitted must be original and would not have been published elsewhere in any form or language (in whole or in part), unless the new work relates to an extension of previous work. (Provide transparency about the reuse of material to avoid concerns about text recycling (self-plagiarism). A single study may not be broken down into different parts to increase the number of entries and be submitted over time to different journals or to one magazine (i.e. salami-slicing/publishing). Simultaneous or secondary publication is sometimes justified, provided that certain conditions are met. Examples include: translations or a manuscript intended for another group of readers. Results should be presented clearly, fairly and without manufacture, falsification or inappropriate data manipulation (including image-based manipulation). Authors must adhere to discipline-specific rules for obtaining, selecting, and processing data. No data, text or theories of others are presented as if they were from the author ('plagiarism'). The correct confirmations to other works must be given (this includes material that is closely copied (almost literally), summarized and/or paraphrased), quotation marks (to indicate words from another source) are used for literally copying material and permissions secured for copyrighted material. Important note: the magazine can use software to screen for plagiarism. Authors should ensure that they have permission to use software, questionnaires/(web) surveys and scales in their studies (if applicable). Research articles and non-research articles (e.g. opinion, review and comment articles) should cite the correct and relevant literature for of the allegations submitted. Excessive and inappropriate self-citation or coordinated among several authors to collective self-citation or coordinated among several authors are considered and considered among several authors are considered and considered among several authors are considered and considered and considered are considered and considered are considered and consi descriptions of their behavior or actions that may be seen as personal attacks or accusations about that person. Research that may be misused to pose a threat to public health or national security should be clearly stated in the manuscript (e.g. double use of research). Examples include the creation of harmful effects of biological agents or toxins, disruption of vaccine immunity, unusual hazards in the use of chemicals, rebarring of research/technology (e.g. Authors are strongly advised to ensure that the author group, the corresponding author, and the authors' order are all correct in submission. Adding and/or removing authors during the review phase is generally not allowed, but may be justified in some cases. Reasons for changes in authorship should be explained in detail. Please note that changes to authorship cannot be made after acceptance of a manuscript. *All of the above are guidelines and authors must ensure that third-party rights such as copyright and/or moral rights are respected. Upon request, authors should be prepared to send relevant documentation or data to verify the validity of the results presented. This can take the form of raw data, samples, records, etc. Sensitive information in the form of confidential or proprietary data is excluded. If there is a suspicion of misconduct or alleged fraud, the Journal and/or Publisher will conduct an investigation in accordance with the COPE guidelines. If there are valid objections after examination, the author(s) concerned will be contacted under their specified email address and given the opportunity to address the problem. Depending on the situation, this may result in the Journal and/or publisher implementing the following measures, including, but not limited to: If the manuscript is still pending, it may be rejected and returned to the author. If the article has already been published online, depending on the nature and severity of the violation: - an erratum/correction can be placed with the article- an expression of concern may be placed with the article- or in severe cases the article may be withdrawn. The reason will be given in the published erratum/correction, expression of concern or withdrawal means that the article is maintained on the platform, watermark and the explanation for the withdrawal is provided in a note linked to the watermark article. The institution of the author may be informed A notice of suspected violation of ethical standards in the peer review system may be included as part of the author and article bibliographic record. Fundamental mistakes Authors have obligation to correct errors as soon as they discover a significant error or inaccuracy in their published article. The author(s) are requested to contact the journal and explain the effect of the error on the article. A decision on the right way to correct the literature will depend on the nature of the error. This may be a correction or withdrawal. The withdrawal note should provide transparency about which parts of the article are affected by the error. Suggesting/excluding reviewers Authors are welcome to suggest suitable reviewers and/or to ask exclusion of certain individuals when submitting their manuscripts. When proposing reviewers, authors should ensure that they are completely independent and not connected to propose a mix of reviewers from different countries and different institutions. When you suggest reviewers, the corresponding author must provide an institutional email address for each suggested reviewer, or, if this is not possible to include other ways to verify the identity, such as a link to a personal homepage, a link to the publication record, or a researcher or author ID in the submission letter. Please note that the Journal may not use the suggestions, but suggestions are appreciated and may help facilitate the peer review process. These guidelines describe authorship principles and good authorship practices that future authors must adhere to. Authorship clarifies The Journal and Publisher take all authors who agreed with the content and that all have given express permission to submit and that they have obtained permission from the responsible authorities of the institute/organization where the work was performed, before the work is submitted. The Publisher does not prescribe the kind of contributions that justify authorship. It is recommended that authors whose names appear on the submission 1) have made significant contributions to the design or design or design of the work; or the acquisition, analysis or interpretation of new software used in the work; 2) has drawn up or critically revised the work for important intellectual content; 3. has approved the version to be published; and (4) agree to be responsible for all aspects of the work to ensure that questions relating to the accuracy or integrity of any part of the work are appropriate investigated and resolved. * Based on/adapted from: ICMJE, Defining the Role of Authors and Contributors, Transparency in authors' contributions and responsibilities to promote integrity in scientific publication, McNutt at all, PNAS February 27, 2018 Disclosures and declarations All authors are requested to include information sources of funding, financial or non-financial interests, study-specific approval by the competent ethics committee for research involving humans and/or animals, informed consent if the research concerned human participants, and a statement on animal welfare where the research concerned animals (where applicable). The decision on whether such information should be included depends not only on the scope of the magazine, but also on the scope of the article. The work submitted for publication may have an impact on public health or the general well-being and in such cases it is the responsibility of all authors to include the necessary publications and statements. Data transparency All authors are asked to ensure that all data and materials, as well as software applications or custom code, support their published claims and meet field standards. Please note that journals may have individual policies on (sharing) research data in accordance with disciplinary standards and expectations. Role of the corresponding author and acts on behalf of all co-authors and ensures that questions regarding the accuracy or integrity of some of the work are properly addressed. The corresponding author shall be responsible for the following requirements: to ensure that all the authors mentioned have approved the manuscript before submission, including the names and order of authors; the management of all communication between the Journal and all co-authors, before and after publication;* making it transparent about the reuse of material and the mention of unpublished material (e.g. manuscripts in the press) contained in the manuscript in an accompanying letter to the editor; ensure that disclosures, statements and transparency of data statements by all authors are included in the manuscript as appropriate (see above).* The requirement to manage all communication between the journal and all co-authors during submission and verification may be delegated to a contact or submission author. In this case, make sure that the author in question is clearly indicated in the manuscript. Author's contributions and in research areas where it is possible to describe discrete efforts, the Publisher recommends that authors include contribution statements in the work that specifies each author's contribution to promote transparency. These contributions must be listed on the individual title page. Examples of such statement(s) are shown below: Free text: All authors contributed to the and the design at. Material preparation, data collection, and analysis were performed with [full name], [full name] and [full name] and [full name]. The first draft of the manuscript was written by [full name] and all authors commented on previous versions of the manuscript. All authors read and accepted the final script. Example: CRediT CRediT • Conceptualisation: [full name], ...; Methodology: [full name], ...; Formal analysis and research: [full name], ...; Writing - original design preparation: [full name], ...; Acquisition of financing: [full name], ...; Sources: [full name], ...; Surveillance: [full name], ...; Formal analysis and research: [full name], ...; Sources: [full name], ...; Surveillance: [full name], ...; Sources: articles in which individual statements are less applicable, a statement that had the idea for the article, who carried out the literature review and data analysis and who drew up and/or critically revised the work. For articles based primarily on the student's thesis or thesis, it is recommended that the student is usually listed as lead author: A Graduate Student's Guide to Determining Authorship Order, APA Science Student Council 2006 Affiliation The primary affiliation for each author should be the institution where the majority of their work was done. Additionally, if an author has moved, the current address may be listed. Addresses will not be updated or changed after the article is published. Changes in authorship Authors are strongly recommended to ensure the appropriate author group, the corresponding author and the order of authors when submitted. Changes to authorship by adding or removing authors, and/or changes to the corresponding author, and/or changes in the order of authors are not accepted after acceptance of a manuscript. Please note that author's names are published exactly as they appear on the accepted entry! Make sure that the names of all authors are present and spelled correctly, and that addresses and preferences are current. Adding and/or removing authors in the review phase is generally not allowed, but in some cases it may be justified. Reasons for these changes in authorship need to be explained. Approval of the change during the review is up to the discretion of the editor-in-chief. Keep in mind that journals may have separate policies for adding and/or removing authors during the review phase. Author Identification Authors is recommended to use their ORCID ID when submitting an article for consideration or obtaining an ORCID ID through the submission process. Deceased or incapacitated authors For cases where a co-author dies or is incapacitated during the writing, filing or peer-review process, and the co-authors consider it appropriate to include the author, co-authors must obtain approval from a (legal) representative who could be a direct family member. issues or disputes In the case of an authorship dispute during peer review or after acceptance and publication, the Journal will not be able to investigate or judge. Authors are asked to resolve the dispute themselves. If they are unable to provide the Journal with the right to submit a manuscript from the editorial process or in the event of a raise the issue with the authors' institutions and comply with the guidelines. Confidentiality Authors should treat all communications with the Journal as confidential, including correspondence with direct representatives of the Journal, such as editors and reports from reviewers, unless express permission has been received to share information. In order to ensure objectivity and transparency in research and to ensure that accepted principles of ethical and professional conduct have been followed, authors should include information on sources of funding, potential conflicts of interest (financial or non-financial), informed consent if the study concerned human participants, and a statement on animal welfare if the research related to animals. Authors should include the following statements (if applicable) in a separate section entitled Compliance with Ethical Standards when submitting a paper: Disclosure of potential conflicts of interest Research involving human participants and/or animals informed consent Please note that standards may vary slightly by journal depending on their peer review policy (i.e. single or double-blind peer review) and by department of the journal. Before submitting your article, please carefully review the instructions that follow this section. The corresponding author should be prepared to collect and send documentation of compliance with ethical standards if requested during peer review or after publication. The editors reserve the right to reject manuscripts that do not comply with the above guidelines. The author will be held responsible for false statements or failure to comply with the above guidelines. Authors are requested to disclose interests directly or indirectly related to the work submitted for publication. Interests in the last 3 years after the start of the work (carrying out the research and preparing the work for submission) should be reported. Interests outside the three-vear time frame should be regarded as influencing the work submitted. Disclosure of interests provides a complete and transparent process and helps readers form their own judgment on potential biases. This is not intended to imply that a financial relationship with an organization for consultancy work is inappropriate. Interests that should be considered and made public, but are not limited to the following: Funding: Research grants from funding institutions (give the research funder and the number) and/or research aid (including salaries, equipment, supplies, compensation for attending symposia, and other expenses) by organizations that may win or lose financially by publishing this manuscript. Employment: Recent (during the research project), present or employment by an organisation that can gain or lose financially by publishing this manuscript. This includes multiple connections (if applicable). Financial interests: shares or shares in companies (including holdings of spouses and/or children) which may gain or lose financially by publication of this manuscript; consultation fees or other forms of remuneration from organisations that can gain or lose financially; patents or patent applications whose value may be affected by the publication of this manuscript. It is difficult to specify a threshold where a financial interest becomes significant, such a figure is necessarily arbitrary, so a possible practical guideline is the following: Any black financial interest that might embarrass the author if it became publicly known after the work was published. Non-financial interests: In addition, authors are requested to disclose interests that go beyond financial interests that may give a bias to the work submitted for publication, such as professional interests, personal relationships, or personal beliefs (among other things). Examples of this are, but are not limited to: position on the editorial board, advisory board or board of directors or other form of management relations; writing and/or consulting for educational purposes; expert witness; mentoring relationships; Etc. Primary research articles require a disclosure statement Review articles present an expert synthesis of evidence and can be treated as an authoritative work on a subject. Review articles therefore require a disclosure statement. Other article types such as editorials, book reviews, comments (among other things) may require a disclosure statement, depending on their content. If you are unclear whether your article type requires a disclosure statement, please contact the editor-in-chief. Please note that, in addition to the above requirements, funding information (given that funding is a potential conflict of interest (as mentioned above)) should be disclosed when submitting the manuscript in the peer review system. This information is automatically added to crossmark's record, but is not added to the manuscript itself. Under summary of the requirements (see below), financing information should be included in the Statements section. Summary of requirements The above should be summarized in a statement and included on a title page that is separate from the manuscript with a section entitled Statements when submitting a paper. Having all statements in one place ensures a consistent and review the information by editor-in-chief and/or peer reviewers and may speed up the handling of the paper. Statements include funding, conflicts of interests, ethical approval, consent, data, materials and/or availability of code and author's contribution Use the title page to provide the statements. Once and if the paper is accepted for publication, the production department will make the respective statements in a clearly identified section clearly visible to readers. Below, see the various examples of formulations and review/adjust the sample statements to your own needs. When all authors have the same (or no) conflicts and/or funding, it is sufficient to use one general statement. Offer Financing as a heading (see template) Partial financial support was received from [...] The research that led to these results received funding from [...] under Grant Agreement No....]. This study was funded by [...] This work was supported by [...] (Grant numbers [...] and [...] In the case of no funding: The authors did not receive support from an organization for the work submitted. No funding was received to assist in the preparation of this manuscript. No funding was received to carry out this research. No money, subsidies or other aid has been received. Enter Conflicts of Interests as a Header (see template) Financial interests: Author A has received research support from company A. Author B has received a speaker honorium from Company Wand owns shares in Company X. Author C is an advisor to company Y.Non-financial interests: Author C is an unpaid member of committee Z.Financial interests: The authors state that they have no financial interests. Non-financial interests: Author A is a member of Y's board of directors and does not receive compensation as a member of the Board of Directors. Financial interests: Author A received a speech from Y for Z. Author B receives a salary from association X. X where he/she is the Executive Director. Non-financial interests: none. Financial interests: Author A and B declare that they have no financial interests. Author C has received speaker and company M. Dr.C has received speaker fee and research funding from Company M and Company O. Author D has received travel support from company O.Non-financial interests: Author D has served on advisory boards for Company N, Company O.When authors have nothing to explain the following statement can be used: The authors have no relevant financial or non-financial interests to disclose. The authors do not declare conflicts of interest relevant to the content of this article. All authors state that they have no ties to or are involved in any organization or entity with any financial or non-financial interest in the subject or material discussed in this manuscript. The authors have no or own interests in any material discussed in this article. Authors are responsible for the accuracy of the statements in the manuscript. See also Authorship Principles. The editor-in-chief reserves the right to entries that do not meet the guidelines described in this section The journal encourages authors to deposit, where possible and applicable, data that support the findings of their research in a public repository. Authors and editors who do not have a preferred repository should consult Springer Nature's list of repositories and research data policies. List of repositories Research Data Policy General repositories - for all types of research data - such as figshare and Dryad can also be used. Datasets assigned by a data repository of digital object IDs (IDs) can be listed in the reference list. Data listings must contain the minimum information recommended by DataCite: authors, title, publisher (repository name), id. DataCite Authors who need help understanding our data sharing policies, helping to find a suitable data repository, or helping organize and share research data have access to our Author Support portal for additional guidance. After acceptance, your item will be exported to Production to undergo a typing. Once the text setting is complete, you'll receive a link asking you to confirm your membership, choose the publishing model for your article, and arrange the rights and payment of any associated publishing costs. Once you have completed this, your item will be processed and you will receive the proofs. Article publishing agreement Depending on the ownership of the magazine and policy, you grant the Publisher an exclusive license to publish the article or you are asked to transfer the copyright of the article to the Publisher. Offprints Can be ordered by the respective author. Color Illustrations is free. For color in the printed version, authors are expected to contribute to the additional costs. Proofreading The purpose of the evidence is to check for s typos or conversion errors and the completeness and accuracy of the text, tables and numbers. Substantive changes, such as new results, corrected values, title and authorship, are not permitted without the approval of the Editor. After online publication, only further changes can be made in the form of an Erratum, which are directed to the article. Online First The article is published online after receiving the corrected evidence. This is the official first publication citable with the DOI. After the release of the printed version, the paper can also be quoted on number and page numbers. Open Choice allows you to publish open access in more than 1850 Springer Nature journals, your research immediately becomes more visible and accessible when published. Article processing costs (APCs) vary by magazine - see the full list Benefits: Increased involvement of researchers: Open Choice allows access by anyone with an Internet connection, immediately on Higher visibility and impact: Springer hybrid magazines open OA articles on average 4 times more often and cite an average of 1.7 times more*. Simple compliance with funders and institutional mandates: many funders require open access publishing, and some take compliance into account when assessing future grant applications. It's easy to find funding to support open access - see our funding and support pages for more information.*) Within the first three years of publication. Springer Nature hybrid journal OA impact analysis, 2018. Open Choice Funding and Support pages Copyright and license term - CC BY Open Choice articles do not require copyright transfer if copyright remains with the author. When referring to open access, the author(s) agrees to publish the article under the Creative Commons Attribution License. Learn more about the license agreement
