Home & Student Edition does not have features compared to Standard Editions — such as the WordPerfect eBook Publisher. Also (from a footnote on that PDF file): it is: & amp; amp; The Student Edition of WordPerfect does not include the following features: PDF Import, PDF Form, SharePoint support, eBook publishing, Metadata Removal, Bates Numbering, Pleading Paper, Pleading Expert, Table of Authorities, document review or routing slip. Note, however, that it can create PDFs — it cannot import them for editing. It can also be legally installed on up to 3 computers in your home. This can offer a cheap upgrade path.] System requirements (from the Corel website): Microsoft Windows 10, Microsoft Windows 8.1, Windows 7 (32-bit or 64-bit edition), with the latest service packs and updates installed 1.5 GB hard disk space for applications files 1 GB RAM (x86) or 2 GB RAM (AMD64) 1 GHz or faster (x x86) or AMD64 1024 x 768 processor resolution Monitor Microsoft Internet Explorer 11 or higher DVD drive (required for box installation) Mouse or tablet with stylus *Internet connection required for X8 [From feature matrix by Version above.] • APA, MLA and Turabian Writing Templates (among others). • Undo level increase [is: default=10, max=300; now: default=50, max=300] • [New macro:] Function Key Keyboard Template Macro [named CreateFunctionKeyTemplate.wcm] - to create your own printable F-Keys keyboard template. • Dock Reveal Codes to the Left, Right or Bottom [accessed via a single toolbar button] • PDF formatting code (see website for WordPerfect Reveal Codes Chart) • Template Preview [accessed via The New File from Template menu] with over 150 free templates included. [Note that the standard installation seems to place such extras in a special location - the C:\Users\Public\Public Documents\WordPerfect Office folder tree, in 13 subfolders.] These templates are not automated like many WordPerfect Projects [accessed through the New Files from Project menu] but because they spawn new documents, you can easily enter your own personal information in the resulting document. Other: • Lock the toolbar: Right-click on the toolbar or property bar and you can lock/unlock everything in their current location. prevent accidentally dragging the toolbar or property bar from its preferred property bar • Number of characters (Tools, Word Count -or- Files, Properties): Now includes counting characters with and without spaces. • [From WPOX8 User Guide:] Scaling (DPI)... dialog boxes, such as Open, Save, and Save As, now respect Windows font scaling (DPI). The icons and text in the dialog box now increase or decrease the size along with the Windows icons. This ensures that the UI elements scale correctly and look crisp and legible on the screen of all resolutions.... [Tip: You may be able to change the resolution scaling for the toolbar a little further just for WordPerfect on high resolution screens by making small (reversible) changes to the program startup icon. See my post on WordPerfect here (05-07-2018)]. • [From press release:] Enhanced! Microsoft Office compatibility: Works with the latest Microsoft Office file formats for seamless file compatibility. WordPerfect gives you a great experience in Windows 10, 8.1 and Windows 7. [No details given.] WORDPERFECT OFFICE X7 (version 17, released in 2014) [Page top] [WPOX7 released in April 2014.] Note: WordPerfect Office X7 (fully patched to at least Service Pack 2 — aka build number 17.0.0.366, released in May 2015) is certified by Corel to work with Windows 10. WPOX7 builds were previously certified for Windows 8/8.1. [* As you might expect from reduced prices. Home and Student Editions don't have some features compared to Standard Editions — such as WordPerfect eBook Publisher. Also (from a footnote on that PDF file): The WordPerfect X7 application in WordPerfect Office X7 - Home and Student Edition does not include the following features or functionality: IMPORT PDF, PDF Form, SharePoint support, Metadata Removal, Bates Numbering, pleading paper, Pleading Expert, Table of Authorities, document review or routing slip. Note, however, that it can create PDFs — it cannot import them for editing. It can also be legally installed on up to 3 computers in your home. This can offer a cheap upgrade path.] New to X7 [From Matrix Update above.] • Open more than 9 documents in a WordPerfect session. Tip: • Even when you open more than 9 documents, only the last 9 will appear in the list at the bottom of the File menu, with the most recent at the top of that list. • However... when more than 9 documents are open, you can use the Program window menu option to Cascade or Tile. Or (in WPX7 and later) you can use the More Windows option that appears in those menu options to bring up additional dialogs listing all the file names of your currently open documents; You can then select what you want to work on from the dialog. • Related tips: Clicking in the area of the main editing screen that has been nested or the tile will bring it forward. Then you can use Separate on the Windows menu to send files to a separate new WordPerfect instance [multiple instances introduced in WPX6]. This may be a useful way to isolate just what you want to work on at the moment, as individual instances can be dragged to different (i.e., split) locations on your desktop screen. • Create Document thumbnails to view in Windows Explorer. [From the program's User Guide, in order of appearance]- • You can do a Help search, or a Web search, directly from within the Reference Center. • Quick reference cards – tips and insights on a variety of topics. • You can create eBooks in EPUB format in addition to MOBI format. • WordPerfect lets you save documents to WPD, DOC, DOCX, PDF, and HTML5 simultaneously. [See new macro below, Save To Multiple Format.wcm.] • When you save the file iteration, the updated version of the file is saved with the version number added to the file name. [See new macro below, Store.wcm Numbered. See also NewFN# macros in the multi-save macro set here.] • You can add files to your Favorites list and open those documents, individually or in groups, using the Favorites Launcher [a new toolbar button (the icon is a yellow star) on the WordPerfect toolbar]. You can also manage your Favorites list. [This feature can also be accessed directly through the new macro below, Favorites Launcher.wcm.] • Mail Merge Expert [on the Tools menu, on the standard & WordPerfect menu=>] is designed to simplify merging addresses with letters, labels, and envelopes. It guides you step by step through merging, from selecting data sources containing recipient information (DAT files) and form documents that have consistent content (FRM files) to merge outputs. You can use a variety of webmail address books that are in CSV format in a merge, but you must first convert them to a DAT file. • You can [...] print all open documents or just the page where the cursor is positioned. [See new macro below, PrintAll.wcm. See also PrintAll macro here.] • You can create fillable PDF forms, which you can distribute to collect certain information from users. You can add form controls to PDF forms [from the Insert menu], such as text fields, check boxes, drop-down lists, list boxes, and radio buttons. • You [can] publish documents to HTML5. • You can manage macros from multiple locations using Macro Manager [new button on standard WordPerfect toolbar; see also new macro below, Macro Manager.wcm]. It provides a description of the file, the date of the last compiled version, and a preview of the code. You can also run or edit macros from Macro Manager. [NOTE: More information about the macros below can be via Help button (F1) : Search Using the macro that came with WordPerfect.] • [New macro: Count Spaces.wcm] Displays the amount & WordPerfect> & WordPerfect> in documents, including or excluding space characters, and including or excluding sub-documents. • [New macro: Calculate words.wcm] Counts all instances of a word or phrase in a document and generates a file that shows the frequency in the current document. [See also WordList macro here.] • [New macro: CSVtoMerge.wcm] Converts contacts exported to a CSV file from a gmail.com, outlook.com, or yahoo.com to a WordPerfect merged data (DAT) file. • [New macro: Favorites Launcher (on the WordPerfect toolbar)] Open favorite documents, individually or in groups, and let you manage your Favorites list. • [New macro: KeystrokeMenu.wcm] Launches The Keystroke Menu, a searchable list of WordPerfect functions that lets you quickly find and perform actions. • [New macro: Lorem Ipsum.wcm] Generates lorem ipsum sample text, and inserts it into the current document. • [New macro: Macro Manager.wcm] Starts Macro Manager, which is a browser that lets you manage macros. • [New macro: Numbered Storage] [See When you save the iteration ... above.] • [New macro: PrintAll.wcm] Prints all open documents. [See also PrintAll macro here.] • [New macro: ReplaceInFolder.wcm] Replaces a word or phrase in all WPD and WPT files in a folder. • [New macro: Save To Multiple Formats.wcm] Lets you save the current file to WPD, DOC, DOCX, PDF, and HTML5 simultaneously. • [New macro: SendToTextBox.wcm] Moves the currently selected text into the selected character text box. • [New macro: Thumbnail Current Page.wcm] Embeds thumbnails of the current page in a viewable document in Explorer. WordPerfect® Office X3 – Home and Student Edition (released August 2007) For more information see Core!'s press release (August 27, 2007) here. WORDPERFECT 12 (released in 2004) [Page top] From Wordperfect Help file: What's new in WP11: Publishing to XML - Lets you publish new and existing WordPerfect documents to the WordPerfect Classic Mode XML format - Lets you change your keyboard and environment to WordPerPerf 1.5.1 Color and keystroke scheme Document tracking - Allows you to automatically route documents to other users using Outlook Document maps - Lets you navigate complex documents Reading Code printing - Lets you print documents with code available for easy troubleshooting conversion utility - Allows you to quickly convert documents to Other WordPerfect formats - New check box in Insert, Header/Footer allows syncing of new headers or footers with document margins in those locations. What's different in WP11: • Publish to PDF - Now supports Acrobat 5.0 • Variables - Upgrades to variable features make it easier to store, retrieve, and re-use documents • Legal tools - Lets you create custom defense templates, capturing case data, and publishing documents directly to EDGAR • Outlook Address Book - Lets you access data directly from the Outlook address book • RealTime Preview - Even more document modifications now work with RealTime Preview • Reference tools - The newly designed user interface makes creating reference tools easier IMPORTANT: The original release of WordPerfect 11 (that is, version 11.0.0.233 as shown in Help>About...) introduced a bug that caused some macros to be created/edited/played in it (no matter who made it) to fail correctly when played in WP11.0.0.300, and vice versa. These macros appear to be rotated but do not return to the main document screen and appear to hang, or they go into endless loops. This issue also affects Core!'s sending macros and macros within various Core! Projects. For solutions, see here. WORDPERFECT 10 (released in 2001) [Page top] What's new in WP10: Align and distribution tools - Lets you align and distribute objects with respect to themselves and pages. Automatically suggest a file name - When you save a document for the first time or as a new file, WordPerfect automatically inserts the suggested file name. Document review margin markers - Allows you to add indicators in document margins to let authors know that text has changed. Improved HTML publishing with Cascading Style Sheet (CSS) support - Allows you to convert WordPerfect documents for use on the World Wide Web by using increased flexibility and advanced page layout and CSS support formatting. Print a list of keyboards - Allows you to print a copy of keyboard shortcuts. You can export the list to a file, and you can also customize the list. Select sections - Lets you select pages, secondary pages, chapters, and volumes. Table to text - Allows you to convert a table to delimited text. Text to a table - Allows you to convert document text to a tabular format, based on user-defined delimiters. Toolbar and property picker - Allows you to select options to underline, undo, or repeat, add drop capital letters, and other formatting options. Two-page view - Supports Revealing Code and writing tools. Variables - Lets you enter variable placeholders into documents and change content later, updating all instances of variables. Zoom Tool - Lets you zoom in on specific areas of the document. With each new version of WordPerfect, certain items are refined, others are renamed, and still others are found in new locations. The following table shows items that have changed in WordPerfect 10. What's different in WP10: App bar – you can now display the current language in the app bar (for example, UK-US, (USA)). You can change the language by accessing the app bar. Comments - The enhanced comment bubble is less annoying, fits only the length of the text, and leaves no free space in the bubble. You can also apply formatting to text, as well as insert graphics, tables, and so on, inside the comment bubble. Core! RealTime Preview - This feature has been expanded to include QuickFont, underline, drop capital letters, and other formatting features. Merge - The Merge feature now allows more fields for each enhanced record and keyboard merging dialog. Navigation - The Go to now feature includes bookmarks, hyperlinks, red striped text, graphics, and other items. The Search by feature has been expanded, and flyouts let you choose your search method faster. Publish to PDF - Supports hyperlinks and watermarks. Ruler - Elements (for example, left margin adjustments) have been redesigned and enlarged. Table - The Tables menu has been added to the menu bar. Cells that contain formulas are marked with Indicators. You can also copy a cell formula by dragging. The QuickSplit Columns and rows button on the property bar lets you split cells into four cells (columns and rows). The Shadow Cursor now works in table cells. Text selection - You have more flexibility in selecting text with your mouse or keyboard. IMPORTANT: The new features introduced in WordPerfect 10 affect [1] how text is selected and [2] how the cursor moves – and can also generate serious problems with some macros in WordPerfect 10 and later versions. This is the result of setting a new checkbox in Tools, Settings, Environment: Use WP9 text selection. Factory setting OFF (check box unchecked) by default – it may be for the convenience of Microsoft Word users so that the program acts the same way when selecting text. Most users of earlier versions of WordPerfect may want to enable it. WORDPERFECT 9 (Released in 1999: rewritten in 2000 and released as WordPerfect 9 -Service Pack 4) (CAUTION: This is NOT the same as WordPerfect X9, released in 2018) [Page top] Initial release: May 1999. Important: WPO9(sp4) was released in September 2000 and is only available directly from Core!. This is an almost complete rewrite of the program – that is, it is not an ordinary patch – so it cannot be downloaded and used to update the initial WPO9 release (even if this version is already patched to SP3). What's new in WP9: Core! RealTime Preview Core! RealTime Preview performance and productivity features let you scroll through and preview several different formatting options, such as fonts, lines, tables, borders, and shading, to see how they look, without applying those changes to your document. Install-As-You-Go Install-As-You-Go helps you minimize the hard disk space required by WordPerfect Office 2000 applications by including only nated needs. If an item that isn't installed is selected, you'll be asked if you want to install it. As embedded WordPerfect 9 fonts let you use the Embedded font feature. If you select Pinned Fonts when you save your document, your fonts are compressed and saved with file data. Now your favorite fonts will go wherever your files go for the presentation you expect. Autocroll Autocroll lets you scroll through documents without using the arrow keys or scroll bar. When you point the Autocroll arrow in the direction you want to move, you can scroll the document. The scroll speed increases as you move the arrow further from the Autocroll tool and slows down as you move the arrow closer to the Autocroll tool. Block-Make-It-Fit WordPerfect 9 enhances make-it-fit features available in previous versions to allow you sections of your document into a certain number of pages without affecting other areas where the specifications fit may differ. Enhanced Enhanced Improved charting modules provide additional charting types and capabilities. WordPerfect 9 improved accessibility continues to work toward accessibility requirements, including High Contrast mode support, providing keystrokes for most features, using standard user interface controls that make Third-Party accessibility tools compatible with Core! applications, support large font modes, and provide options under settings to provide flexibility in functionality. WordPerfect 9 enhanced shapes provide more than 100 new shapes. You can select shapes from the new shape palette or use the Basic Shapes, Arrows, Stars, Banners, and Flowchart tools. The Actions button requests action assignment; The outgoing call shape has a pointer that can dock anywhere in the document. All shapes have a new Text In Shapes feature, which allows text to be quickly added to a shape. Visual Basic for Applications Integration Visual Basic for Applications (VBA) lets you develop VBA applications to control WordPerfect 9 through the CLE Automation Type Library. The main object exposed by WordPerfect 9 is the PerfectScript object, which consists of all the functions currently available in the PerfectScript language, making it easy for those familiar with PerfectScript to modify existing scripts and to understand the syntax and parameters needed to program the PerfectScript object method. These VBA projects are stored in application documents and are easy to distribute. Italic table cells You can skew the top row or the left or right column of the table. Unless you specify otherwise, any text you type in italic cells will also be italic. You can also change the skew angle and specify other leaning options. WordPerfect 9 enhanced multiple-page printing includes additional options for printing multiple pages. You can specify the number of copies you want to print and whether you want them to be arranged. Collage is useful when printing multipage documents. When you enable the Collage check box, a full copy of each document is printed before the next document is printed; when the collage is disabled, all copies of the first page are printed before the second page copy is printed. Print Preview Although WordPerfect 9 creates a document in a WYSIWYG environment, many users have requested the Print Preview option. WordPerfect 9 lets you view your document as a single page or a double page. Print Preview is fully compatible with Core! RealTime Preview, which lets you experiment with formatting options, such as fonts, lines, tables, borders, and shadows, without applying them to your document. Print Preview is also fully editable; therefore, you do not need to return to regular view to make changes to your document. Browse button Browse button makes navigation in more documents WordPerfect 9 lets you navigate documents the same way you navigate internet documents. WordPerfect 9's enhanced file conversion and integration features continue to use the same file formats as their predecessorsCore! WordPerfect 6, 6.1, 7, and 8with those that require any conversion from previous versions. Keeping the same file format allows you to convert Microsoft Word and Lotus AmiPro documents while keeping all document data from being open for storage. In-Place Editing lets you edit objects without switching to another window. The buttons and list boxes temporarily change to work specifically with the object. WordPerfect 9 On-Premises Activation now uses the new In-Place Activation feature to help further integrate Third-Party apps into Office 2000 WordPerfect. By double-clicking an OLE object, the object's native editing or development environment starts inside WordPerfect, providing seamless integration of 3rd Party applications. XML XML (eXtensible Markup Language) capabilities provide an application-independent platform and environment for determining document architecture and document markup. WordPerfect 9 lets you create, validate, and store XML documents in familiar WYSIWYG environments. The structured tree view, shown in a separate window, provides a complete document layout that is easy to read. WordPerfect 9 automatically inserts and maintains tag pairs to create XML files. WordPerfect 9 provides an editing environment that includes guidance, automatic insertion of elements, and automatic document creation, which makes document creation quick and easy. You can customize menus, toolbars, and keyboard mappings to create your own work environment. WordPerfect 9 combines Document Type Definitions (DTDs), layout information, and mapping files into a single WordPerfect template. For more information about XML, see WordPerfect Online Help. WordPerfect 9 SGML Editor lets you create SGML documents in familiar WordPerfect environments. WordPerfect 9 lets you edit, mark text, and validate tags in SGML documents. You can also use WordPerfect 9 stationery, such as Spell Check and Quick Correction. You can hide SGML code in the document window and use WordPerfect 9 text formatting to make SGML documents easier to read on the screen. The SGML editor also provides the following capabilities: document structure display, giving WYSIWYG views on one side of the screen and tree view on other enhanced graphics that let you import and export markup with the SGML document authoring tool comparing automatic mapping features for Standard Organization characters (ISO) during the DTD compilation process to map multinational characters to the appropriate characters in the SGML Editor. Manual character mapping is not included in the ISO character set. Enhanced Enhanced and exporting the Internet capabilities of the SpeedLinks SpeedLinks feature lets you create linkshighlighted Internet text in World Wide Web documents that help you jump to other parts of the same document or to other documents on the World Wide Web. When you type text that starts with www, ftp, http, or mailto, SpeedLinks automatically converts the text to an Internet link. Teralex 2 Teralex 2 integration lets you create and organize professional and effective documents that can be published to HTML. Teralex can make long and complicated documents easy to understand and navigate; Integrated navigation maps let you visualize and quickly access any part of your document. Teralex documents resemble web pages, with easy-to-create links, and you can add spreadsheets, graphs, and other files. What's different in WP9: With each new version of WordPerfect a certain item is added, another is renamed, still another one is found in the new location. Items renamed or moved in version 9 are: QuickSpots QuickSpots provides direct access to editing features for specific objects in the document, such as paragraphs or tables. WordPerfect 9 enhances this idea by including more than 20 different Property Bars that appear when you click a specific object. The Property Bar changes to suit your immediate needs. For example, click a table, and the Property Bar displays buttons for the table editing tools. Click the graphic, and the Property Bar displays the graphical editing tools. PerfectExpert WordPerfect 9 comes with its own built-in expert, ready to help you with any task. PerfectExpert includes the best features of Quick Tasks, templates, and Coaches, combined with information from online Help and the power of a natural language interface to help you with everyday tasks. PerfectExpert lets you quickly create complex documents using professionally designed templates. The Menu menu in WordPerfect 9 has undergone a significant restructuring to improve access to the most frequently used features. The menu is also standardized across Office 2000 WordPerfect apps to make learning easier for each app. Right-click the menu to choose a menu similar to the menu you used in previous versions of WordPerfect. The Tables and Graphs menu is no longer available; editing features for tables and graphics are now available in the Property Bar. Click the table or graphic to display the Table or Graphic Properties Bar. File menu, Publish As and File, Send consolidated as File, Send To, Outline Features and &P; Numbering consolidated in Insert, Outline/Bullet &P; Numbering. The abbreviation feature is renamed to QuickWords and moved to Tools, QuickWords. Help used to access technical information and additional products, renamed the Core! Web site. The Initial Document style is renamed and moved to Document, Current Document Style. The Initial Document font is renamed and moved to File, Document, Default Font. Edit level stylesWhen you organize text using bulleted lists, numbered lists, and outlines, you can create level styles. For example, you can create a style that formats all second-level headings in bold italics. In WordPerfect 9, you can edit a level style that you've created, but you can't edit any of the preset styles provided with WordPerfect. WORDPERFECT SUITE 8 (released in 1997) (CAUTION: This is NOT the same as WordPerfect X8, released in 2016) [Page top] [Initial release: 1997. WPO8/sp7 was released in December 1999. (Note: Two patch versions of SP7 are available – one of which is for Legal Edition only. Users are warned to use the correct patch for their Edition.) What's New in WP8: Core! WordPerfect Suite 8 adds an updated and more intuitive user interface to classic products. The new context-sensitive Property Bar, updated toolbars, and simplified dialog boxes provide a highly tuned and intuitive work environment. This innovative and powerful context sensitive Bar Property Bar changes depending on the task you perform. For example, while you're working on a table, the Property Bar displays a table tool. When you select a graphic, the Property Bar changes to a graphic tool. The powerful new App Bar App Bar lets you switch between documents, drag and drop information, and easily work with multiple documents. Core! PerfectExpert The Core! PerfectExpert combines the best features of QuickTasks, templates, Help, and Coaches to help you get your work done faster. Core! PerfectExpert can walk you through detailed projects like creating resumes (even if you want to use another suite of apps to create document sections), or can walk you through smaller tasks like inserting clipart images. Core! PerfectExpert gives you a professionally designed document gallery to choose from, and you can change the layout and content in a variety of ways to meet your needs. HTML Support With the addition of HTML form support, Core! WordPerfect continues to lead the industry in Internet publishing technology. Using Internet Publisher, you can add form fields to your web document. These fields include radio buttons, checkboxes, list options, and text boxes, making information collection easier than ever. You can insert sound clips, image maps, and even Java applets to make your pages interesting and easy to navigate. Core! WordPerfect supports HTML 2.0 and 3.2 specifications, and includes some additional browser-specific tags recognized by Netscape Navigator Netscape Communicator 4.0 and Internet Explorer version 3.0 and higher. WordPerfect's Core! QuickLinks pioneered the ability to link text to documents and bookmarks with Hypertext features. Core! Core! 7 adds the ability to link to Uniform Resource Locator (URL) on the Internet. Core! WordPerfect 8 continues to enhance this capability with the QuickLinks feature. When you type text that starts with www, ftp, http, or mailto, QuickLinks automatically converts it to an Internet link. You can even modify QuickLink to convert links to more meaningful terms. For example, as you type www.coreform.com, QuickLink can replace visible text with Core! and create a link to the Core! home page in the Intel MMX Support Core! WordPerfect Suite 8 is the first software suite to support Intel Pentium with MMX technology. You don't need to have a computer equipped with MMX technology to run Core! WordPerfect 8. However, MMX-enhanced computers can improve core! performance of WordPerfect by reducing the time it takes to rearrange bitmap and vector graphics and increase speed in other areas. The new Picture Layer Image Layer lets you draw graphic objects directly over text, group graphic objects, and arrange graphic object order. Create lines and shapes with arrowheads, polygons, circles, and more. Add colors, gradient fills, and patterns to give your document extra polish. You can even draw on top of a clipart or chart that you have inserted into your document. Enhanced table tables have always been a hallmark of Core! WordPerfect. You can insert a table that spans a full page width, or only part of it. When you click a table, the Table Properties Bar appears giving you one-click access to dynamically size rows within a table and quickly merges or splits cells with a single click and drag. QuickFormat easy-to-use formatting for tables. Just select the table cells that contain the formatting you like, select Quick Format, and apply the format to the cells you want to change. Grammar-As-You-Go Core! WordPerfect 7.4 adds Spell-As-You-Go, a time-saving feature that lets you correct spelling errors as you type. Core! WordPerfect 8 adds Grammar-As-You-Go, another wordaving feature that lets you recognize and fix common grammar problems as you type. For example, phrases like they're at home are marked in a document. Right-click the tagged phrase and choose from a list of possible suggestions, or ignore the flagged phrase and continue. Core! Version Core!'s version solves the problem of trying to control and track multiple copies of the same file. Instead of trying to track all your updates to a file by saving its new version with a different file name, Core! Versions lets you save the changes you've made to each successive version of your file. With Core! You can: Archive previous versions of files Take archived versions of files View archived versions of files Compare archived files to see the difference between them Attach meaningful information to each version that can be displayed in the document history window Track some users of common files Delete archived files from the history list Specify how many versions should be saved in the document history list Protect certain archived versions from being removed from the SGML Editor history list Using the familiar WordPerfect Core! environment, you can create new SGML documents, edit existing SGML documents , mark text, validate tags, and improve how your SGML documents are printed. You can also use the power of the WordPerfect Core! writing tool to check spelling and fix typing errors automatically with QuickCorrect. You can hide SGML code in a document window and use Core! WordPerfect text formatting to make documents easier to read on the screen. Core! Provides WordPerfect: A structured view of a document that provides a WYSIWYG view of the document on one side and a tree view on the other. Improved graphics support so that graphics and markup associated with graphics can be imported and exported with SGML documents. Automatic mapping for ISO characters during the DTD compilation process so that multi-national characters are mapped to the appropriate characters in the editor. (Characters not included in the ISO character set can still be mapped by hand.) Increased import and export to handle white space in SGML documents is better. Where did it go? QuickSpots QuickSpots provides direct access to editing features for specific objects in a document, such as paragraphs or tables. Core! WordPerfect 8 enhances this idea by including more than 20 different Property Bars that appear when you click a specific object. The Property Bar changes to suit your immediate needs. For example, click a table, and the Property Bar displays buttons for the table editing tools. Click the graphic, and the Property Bar displays the graphical editing tools. PerfectExpert trainers guide you through small tasks, such as creating headers, and demos show you an overview of specific features. But they didn't take into account the work you were trying to do at the time. PerfectExpert combines the best features of QuickTasks, templates, Help, and Coaches to help you get your work done faster. PerfectExpert gives you a professionally designed document gallery to choose from, and you can change the layout and content in a variety of ways to meet your needs. Beginners will appreciate the way PerfectExpert provides a task-oriented approach to sometimes outstanding and complex applications. More advanced users will love the flexibility and direct help PerfectExpert provides when they use the features in Core! WordPerfect to create complex documents. QuickFinder QuickFinder direct through the Open dialog box. Click Open File, and then specify the drive or folder you want to search. Inside text box, specify the file type (such as *.wpd) or the contents of the file (such as Core! WordPerfect). Then, click Find. Click about QuickFinder for more information. The Insert menu has evolved to include several types of document objects such as tables, graphics, watermarks, equations, headers, and footers. The Tables and Graphics menu is missing and editing features for tables and graphics are now available in the Properties Bar. Click the table or graphic to display the Table or Graphic Properties Bar. The File>Publish as and File>Send menu are consolidated as File>Send to. Outline Features and &P; Numbering consolidated in Insert>Outline/Bullet &P; Numbering. The abbreviation feature is renamed to QuickWords and moved to Tools>QuickWords. Help Online, which is used to access technical information and additional products, was renamed to the Core! Website. The Initial Document style was renamed and has been moved to > Repeating Document. The Menu Menu menu in Core! WordPerfect 8 has undergone a significant restructuring to improve access to the most frequently used features. Menus are also standardized throughout the suite of apps to make learning each application easier. Right-click the menu to choose a menu similar to the menu you used in the Core! version of WordPerfect.The previous Initial Document font was renamed and moved to Font File>Document>Default.
